Web	http://moovi.uvigo.gal/			
General description	The main objective of this course is to train students in the use of the most commonly used geometric shapes and projections in engineering drawing. The subject of Engineering Graphics also aims to improve the student's spatial vision and to introduce him/her to the concept of standardisation. To achieve these objectives, we will use both manual and computer-based drawing methods.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
B6	CG6 Capacity for handling specifications, regulations and mandatory standards.
C5	CE5 Capacity for spatial vision and knowledge of the techniques of graphic representation, using traditional methods of metric geometry and descriptive geometry, and through the application of computer-aided design.
D2	CT2 Problems resolution.
D6	CT6 Application of computer science in the field of study.
D9	CT9 Apply knowledge.

Expected results from this subject

Expected results from this subject	Training and Learning Results		
- Know, understand, and apply a body of knowledge about the basics of drawing and standardization of industrial engineering, in its broadest sense , while promoting the development of space capacity.	B3 B4	C5	D6
Purchase the capacity for the abstract reasoning and the establishment of strategies and efficient procedures in the resolution of the graphic problems inside the context of the works and own projects of the engineering.	B3 B4		D2
Use the graphic communication between technicians, by means of the realisation and interpretation of planes in accordance with the Norms of Technical Drawing, involving the use of the new technologies.	B6	C5	D6 D9
Assume a favourable attitude to the permanent learning in the profession, showing proactive, participatory and with spirit of improvement.	B4		D9

Contents

Topic

(*)Bloque I. Xeometría plana.	(*)Repaso de coñecementos previos. Xeometría métrica aplicada á enxeñaría. Curvas técnicas.
(*)Bloque II. Debuxo asistido por ordenador en 2D y 3D.	(*)Introdución ao debuxo asistido por ordenador. CAD. Entorno de traballo. Sistemas de coordenadas. Intercambio UCS-UCS. UCSFOLLOW. ADMINSCP. Comandos de debuxo. Entidades gráficas. Axudas para o debuxo. Referencias de entidades. Elementos básicos - Comandos de edición, repetición, ferramentas de expresión: capas e sombreado. Comandos de visualización, presentación, acotación e impresión. Entornos 3D: operacións básicas, modelado, conxuntos e debuxos. Intercambio de información.
(*)Bloque III. Sistemas de representación.	(*)Fundamentos. Introdución: Tipos de proxeccións. Invariantes proxectivos. Sistema diédrico. Fundamentos. Pertenza e incidencia. Paralelismo e perpendicularidade. Distancias e ángulos. Operacións: Rotacións, cambios de plano e diminucións. Superficies radiadas e poliedros de revolución. Sistemas de planos limitados. Fundamentos. Pertenza e incidencia. Paralelismo e perpendicularidade. Distancias e ángulos. Dexeccións. Pertenza e incidencia. Paralelismo e perpendicularidade. Distancias e ángulos. Operacións: Rotacións, cambios de plano e diminucións. Sistema axonométrico: Fundamentos. Tipos de axonometría: trimétrica, dimétrica e isométrica. Sistema de perspectiva Cavalier: Fundamentos. Sistema de perspectiva cónica: Fundamentos.
(*)Bloque IV. Normalización.	(*)O Debuxo como linguaxe. Tipos. Normalización de debuxos de bosquejo e aplicación de normas. Normalización do debuxo. Normalización básica: formatos, escritura, tipos de liña, escalas, etc. Representación segundo a ISO 128. Principios básicos de representación. Métodos de proxección. Vistas. Seccións, cortes e roturas. Convencionalismos. Norma de dimensionamento ISO 129. Principios xerais de dimensionamento. Dimensionamento de mecanizado: roscas e conexións roscadas. Clasificación de roscas. Representación de roscas. Roscas estandarizadas. Designación e dimensións das roscas máis comúns (M e W). Debuxos de montaxe e explosionados. Sistema de tolerancias. Tolerancias dimensionais e axustes. Tolerancias ISO: graos, posicións, tipos de axuste, etc. Sistemas de axuste. Implementación en debuxos. Exemplos.

Methodologies	
	Description
Lecturing	Active masterclass. The professor will give a presentation of each module. The students will be encouraged to take an active role in the lectures through questions, discussions and exercises.
Problem solving	Exercises and/or problems will be posed and solved individually or in groups.
Seminars	Carrying out activities to reinforce learning through the tutored group resolution of practical cases linked to the theoretical content of the subject.
Project based learning	Carrying out of activities that require active participation and collaboration among the students.

Assessment		Qualification Training and Learning Results			
	Description				
Problem and/or exercise solving	It will make a first partial examination (eliminary of matter) of the first contents of the matter, that will be able to include test type test, questions of reasoning, resolution of problems and development of practical cases. It demands reach a minimum qualification of 4,0 points on 10 possible to be able to surpass the subject.	35	B3 B6	C5	D2 D9
Problem and/or exercise solving	It will make a second partial examination (eliminary of matter) of the remaining contents of the matter, that will be able to include test type test, questions of reasoning, resolution of problems and development of practical cases. It demands reach a minimum qualification of 4,0 points on 10 possible to be able to surpass the subject.	35	B4 B6	C5	D2 D9
Laboratory practice	It will make a proof of practise of CAD, in which it will verify the capacity of the student in the handle of systems of drawing by computer. It demands reach a minimum qualification of 5,0 points on 10 possible to be able to surpass the subject	15	B4	C5	D2 D6 D9
Laboratory practice	Along the course, in determinate sessions will pose problems or exercises for his resolution by the students and back delivery to the professor, that will evaluate them in accordance with the criteria that previously will have communicated to the students. These tasks will be so much in format paper as of CAD. It demands reach a minimum qualification of 5,0 points on 10 possible to be able to surpass the subject.	15	B4	C5	D2 D6 D9

Other comments on the Evaluation

MODALITY OF CONTINUOUS EVALUATION:

There will be two eliminary partial tests (with an approximate weight of 25% and 35%) in which a minimum mark of 4.0 out of a possible 10 points must be obtained in each of the tests (as well as an overall 5.0) in order to pass the subject. The parts not passed can be passed later in the final exam of the subject.

In addition to the two partial tests, the practical work will also be assessed by means of a CAD test and the different sheet, exercises and practical work that will be carried out throughout the whole four-month period (with a weight of 20% and 20% respectively for each of these two parts). In order to pass the subject, a minimum mark of 5.0/10 points must be achieved in each of these parts.

In the final exam, a theoretical-practical test will be carried out to assess the degree of acquisition of competences, in which a minimum grade of 5.0/10 will be required to pass the course.

In the second call, there will be a theoretical-practical test in order to pass the course, it will be necessary to achieve a minimum grade of 5.0/10. This exam is open to all students who have not passed the subject in any of the previous tests.

MODALITY OF NON CONTINUOUS EVALUATION:

Students who waive continuous assessment must sit the final exam with all the material and must also take a practical test in order to pass the subject. This practical test, which will complete the overall final exam, will consist of two parts, one of CAD and the other of graphic tracings (in addition, in order to take this practical test, students may be required to present a series of tasks previously carried out by the student).

In the second call, there will be a theoretical-practical test with similar characteristics to the final exam, in which, in order to pass the course, it will be necessary to achieve a minimum grade of 5.0/10. This exam is open to all students who have not passed the subject in any of the previous tests.

Honor code: Students are expected to observe academic integrity. If any type of unethical behaviour is detected (e.g. cheating, plagiarism, use of unauthorised electronic devices, etc.) the student will be considered as not meeting the

requirements to pass the course and will be assigned a failing grade (0).

Recommendations

Other comments

To be successful in this course, it is recommended to have a background in technical drawing, standardisation and computer-aided drafting at high school level.

In case of discrepancies, the Spanish version of this guide shall prevail.

Contents

Topic	
1.- UNITS, PHYSICAL QUANTITIES AND VECTORS	1.1.- The nature of Physics. 1.2.- Consistency and conversions of units. 1.3.- Uncertainty and significant figures. 1.4.- Estimates and orders of magnitude. 1.5.- Vectors and sum of vectors. 1.6.- Vector components. 1.7.- Unitary vectors. 1.8.- Vector products. 1.9.- Sliding Vectors

2.- KINEMATICS	2.1.- Position, speed and acceleration vectors. Average and instantaneous values. 2.2.- Angular speed and angular acceleration. Average and instantaneous values. 2.3.- Relation between linear kinematic magnitudes and angular magnitudes. 2.4.- Intrinsic components. 2.5.- Study of simple movements: linear motion in 1D, circular motion, projectile motion. 2.6.- Expression of kinematic magnitudes in cartesian and polar coordinates
3.- NEWTON'S LAWS OF MOTION	3.1.- Force and interactions. 3.2.- Newton's first law. Inertial and non-inertial reference systems. 3.3.- Newton's second law. 3.4.- Mass and weight. 3.5.- Newton's third law. 3.6.- Momentum. Mechanical impulse. Angular momentum. 3.7.- Contact forces.
4.- WORK AND KINETIC ENERGY	4.1.- Work done by a force. Power. 4.2.- Kinetic energy. 4.3.- Conservative Forces 4.4.- Elastic potential energy. 4.5.- Potential energy in the gravitatory field. 4.6.- Mechanical energy. 4.7.- Force and potential energy. 4.8.- Principle of conservation of mechanical energy.
5.- KINEMATICS OF SYSTEM OF PARTICLES	5.1.- System of particles. 5.2.- Rigid body. 5.3.- Translation movement. 5.4.- Movement of rotation around a fixed axis. 5.5.- General movement. 5.6.- Instantaneous center of rotation. 5.7.- Rolling motion. 5.8.- Relative movement.
6.- DYNAMICS OF SYSTEMS OF PARTICLES	6.1.- Systems of particles. Internal and external forces. 6.2.- Centre of mass. Movement of the centre of mass. 6.3.- Equations of the movement of a system of particles. 6.4.- Linear momentum. Conservation of linear momentum. 6.5.- Angular moment of a system of particles. Conservation of angular momentum. 6.6.- Work and power. 6.7.- Potential energy and kinetics of a system of particles. 6.8.- Conservation of energy of a system of particles. 6.9.- Collisions.
7.- RIGID BODY DYNAMICS	7.1.- Rotation of a rigid body around a fixed axis. 7.2.- Moments and products of inertia. 7.3.- Calculation of moments of inertia. 7.4.- Steiner's theorem. 7.5.- Moment of a force and pair of forces. 7.6.- Equations of the general movement of a rigid body. 7.7.- Kinetic energy in the general movement of a rigid body. 7.8.- Work in the general movement of a rigid body. 7.9.- Angular momentum of a rigid body. Conservation theorem.
8.- STATICS	8.1.- Equilibrium of rigid bodies. 8.2.- Center of gravity. 8.3.- Stability. 8.4.- Degrees of freedom and links
9.- PERIODIC MOTION	9.1.- Description of the oscillation. 9.2.- Simple harmonic motion. 9.3.- Energy in the simple harmonic motion. 9.4.- Applications of simple harmonic motion. 9.5.- The simple pendulum. 9.6.- The physical pendulum. 9.7.- Damped oscillations. 9.8.- Forced oscillations and resonance.

10.- FLUID MECHANICS	10.1.- Density. 10.2.- Pressure in a fluid. 10.3.- Fundamental principles of fluidostatics. 10.4.- Continuity equation. 10.5.- Bernoulli equation.
11.- MECHANICAL WAVES	11.1.- Types of mechanical waves. 11.2.- Periodic waves. 11.3.- Mathematical description of a wave. 11.4.- Speed of a transverse wave. 11.5.- Energy of the wave movement. 11.6.- Wave interference, boundary conditions and superposition. 11.7.- Stationary waves on a string. 11.8.- Normal modes of a rope.
LABORATORY	1.- Theory of Measurements, Errors, Graphs and Fittings. Examples. 2.- Reaction Time. 3.- Determination of the density of a body. 4.- Relative Movement. 5.- Instantaneous speed. 6.- Study of the Simple Pendulum. 7.- Experiences with a helical spring. 8.- Damped and forced oscillations. 9.- Moments of inertia. Determination of the radius of rotation of a body. 10.- Stationary waves.
LABORATORY NO STRUCTURED	1. Sessions with no structured activities (open practice) from the theoretical contents of the practices enumerated above. The groups of students shall resolve a practical problem proposed by the professor, selecting the theoretical frame and experimental tools to obtain the solution; for this, they will have basic information and the guide of the professor.

Planning

	Class hours	Hours outside the classroom	Total hours

Report of practices, practicum and external practices	0	9	9

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Explanation by the professor of the contents of the subject, theoretical bases and/or guidelines of a work, exercise or project to be developed by the student.
Problem solving	Problems and/or exercises related to the subject are formulated. The student has to arrive to the correct solution by application of routines, formulas or algorithms, procedures of transformation of the available information and the interpretation of the results. It is usually employed to complement the lectures.
Laboratory practical	Activities to apply the knowledge to specific situations and to acquire basic skills and procedures related with the subject. They are developed in special spaces with specialized equipment (laboratories, computer rooms, etc).

Personalized assistance

Methodologies	Description
Lecturing	In office hours
Laboratory practical	in office hours

Assessment				
	Description	Qualification	Training and Learning Results	
Objective questions exam	Tests for evaluating the acquired competences that include closed questions with different answer alternatives (true / false, multiple choice, pairing of elements ...). Students select an answer from a limited number of possibilities.	10	B3	C2
Problem and/or exercise solving	Test in which the student must solve a series of problems and / or exercises in a time / condition established by the teacher. In this way, the student must apply the knowledge they have acquired.	50	B3	C2 D2
Essay questions exam	Competency assessment tests that include open-ended questions on a topic. Students must develop, relate, organize and present the knowledge they have on the subject in an extensive answer.	30	B3	C2
Report of practices, practicum and external practices	Preparation of a document by the student that reflects the characteristics of the work carried out. Students must describe the tasks and procedures developed, show the results obtained or observations made, as well as the analysis and treatment of data.	10	B3	C2 D9 D10

Other comments on the Evaluation

Final mark G comprises the marks on the topics covered in the lectures (classtest mark, weight 80%) and in the lab (laboratory mark, weight 20%).

1.1. CLASS TEST MARK It will be obtained through two blocks of theoretical-practical tests, which we will refer to with the letters C (course) and F (final), each with a weight of 40% of G. In the ordinary call, tests during the course (mark C0) and a final test (mark F1) will be taken. On the same day as the F1 test there will be an optional test C1 to replace C0, so that each student can choose between maintaining her/his mark C0 or taking the test to obtain a new mark C1 to replace C0. The extraordinary call will comprise two tests, C2 and F2, equivalent in contents and assessment methodology (objective questions, essay questions and problem solving) to C1 and F1, respectively. In test C2, each student can choose between maintaining her/his previous mark from block C or taking the test to obtain a new mark to replace the previous one. In test F2, each student can choose between maintaining her/his previous mark from block F or taking the test to obtain a new mark to replace the previous one. 1.2. LABORATORY MARK In the ordinary call, during the course you can obtain mark L0. This mark consists of two blocks, each with a weight of 10% of G: theoretical-practical tests (mark L0E), and practical reports (mark L0I): $L0 = L0E + L0I$. It is mandatory the attendance to all lab sessions to obtain the mark L0, otherwise, $L0 = 0.0$. On the same day as the F1 test there will be an optional theoretical-practical test L1 to replace L0, so that each student can choose between maintaining her/his previous mark L0 or taking the test to obtain a new mark L1 to replace L0. In the extraordinary call there will be a theoretical-practical test L2, equivalent in contents and assessment methodology to L1. In test L2, each student can choose between maintaining her/his previous laboratory mark or taking the test to obtain a new mark to replace the previous one. 1.3. FINAL MARK $G = C (40\%) + F (40\%) + L (20\%)$ where C is the most recent of the C block marks, F is the most recent of the F block marks, and L is the most recent of the laboratory marks. 2. GLOBAL ASSESSMENT (EG) Only those students who have been granted a waiver of continuous assessment can opt for this assessment modality.

Final mark G comprises the marks on the topics covered in the lectures (classtest mark, weight 80%) and in the lab (laboratory mark, weight 20%).

2.1. CLASS TEST MARK It will be obtained through a theoretical-practical test (mark denoted by A1 in the ordinary call and by A2 in the extraordinary call). In test A2, each student can choose between maintaining her/his previous class test mark or taking the test to obtain a new mark to replace the previous one. 2.2. LABORATORY MARK It will be obtained through a theoretical-practical test (mark denoted by L1 in the ordinary call and by L2 in the extraordinary call). In test L2, each student can choose between maintaining her/his previous laboratory mark or taking the test to obtain a new mark to replace the previous one. 2.3. FINAL MARK $G = A (80\%) + L (20\%)$ where A is the most recent of the classtest marks, and L is the most recent of the laboratory marks. 3. END-OF-PROGRAM CALL The end-of-program call follows the same scheme as the global assessment, with the exception that there is only one exam. Final mark G for the end-of-program call: $G = A (80\%) + L (20\%)$. 4. GENERAL RULES To pass the course, a student must obtain a final mark equal to or higher than 5 (out of 10). Students who do not take any of the tests (C, F, A, L) on the day of the final test will receive a grade of "no presentado" for that call. Within the specifications detailed in the preceding sections, the tests may consist of different variants within the same classroom or laboratory group. Ethical commitment: Every student is expected to behave in an appropriate ethical manner. Should unethical conduct be detected (copying, plagiarism, utilisation of unauthorised electronic devices, or others), the student will be considered not to have fulfilled the necessary requirements to pass the subject. In this case, the final mark

in the corresponding edition of the academic record for the subject will be "suspense" (0.0). Students should not have access to or use any electronic device during the tests and exams, unless specifically authorised. The mere fact of taking an unauthorised electronic device into the examination room will result in the student failing the subject and the final mark in the corresponding edition of the academic record for the subject will be "suspense" (0.0).

Recommendations

Other comments

Recommendations:

1. Basic knowledge acquired in the subjects of Physics and Mathematics in previous courses.
2. Capacity for written and oral comprehension.
3. Abstraction capacity, basic calculation and synthesis of information.
4. Skills for group work and group communication.

In case of discrepancy between versions, the Spanish version of this guide will prevail.

General description	(*) The objective of this course is that the student acquires the mastery of the basic techniques of Linear Algebra and Statistics that are necessary in other subjects that must be taken later in the degree.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
C1	CE1 Ability to solve mathematical problems that may arise in engineering. Ability to apply knowledge about: linear algebra, geometry, differential geometry, differential and integral calculus, differential equations and partial differential equations, numerical methods, numerical algorithms, statistics and optimization.
D2	CT2 Problems resolution.
D5	CT5 Information Management.
D6	CT6 Application of computer science in the field of study.
D9	CT9 Apply knowledge.

Expected results from this subject

Expected results from this subject	Training and Learning Results		
Acquire the basic knowledge on matrices, vector spaces and linear maps.	B3	C1	
Handle the operations of the matrix calculation and use it to solve problems to systems of linear equations.	B3	C1	D2
Understand the basic concepts on eigenvalues and eigenvectors, vector spaces with scalar product and quadratic forms used in other courses and solve basic problems related to these subjects.	B3	C1	D2 D9
Perform basic exploratory analysis of databases.	B3	C1	D5
Model situations under uncertainty by means of probability.	B3	C1	D2
Know basic statistical models and their application to industry and perform inferences from data samples.	B3	C1	D2 D9
Use computer tools to solve problems of the contents of the course.	B3		D2 D6

Contents

Topic	
Preliminaries	The field of complex numbers.
Matrices, determinants and systems of linear equations.	Definition and types of matrices. Matrices operations. Elementary transformations, row echelon forms, rank of a matrix. Inverse and determinant of a square matrix. Consistency of systems of linear equations and their solutions.
Vector spaces and linear maps.	Vector space. Subspaces. Linear independence, basis and dimension. Coordinates, change of basis. Basic notions on linear maps.
Eigenvalues and eigenvectors.	Definition of eigenvalue and eigenvector of a square matrix. Diagonalization of matrices by similarity transformation. Applications of eigenvalues and eigenvectors.
Vector spaces with scalar product and quadratic forms.	Vectorial spaces with scalar product. Associated norm and properties. Orthogonality. Gram-Schmidt orthonormalization process. Orthogonal diagonalization of a real and symmetric matrix. Quadratic forms.
Probability.	Concept and properties. Conditional probability and independence of events. Bayes Theorem.
Discrete random variables and continuous random variables.	Definition of random variable. Types of random variables. Distribution function. Discrete random variables. Continuous random variables. Characteristics of a random variable. Main distributions: Binomial, Geometric, Poisson, Hypergeometric, Uniform, Exponential, Normal. Central Limit Theorem.
Statistical inference.	General concepts. Sampling distributions. Point estimation. Confidence intervals. Tests of hypotheses.
Regression.	Scatterplot. Correlation. Linear regression: regression line. Inference about the parameters of the regression line.

Planning

	Class hours	Hours outside the classroom	Total hours

Autonomous problem solving	

Assessment

Description	Qualification	Training and Learning Results

Problem and/or exercise solving	CONTINUOUS ASSESSMENT (CA). Students who wish to take part in continuous assessment will have continuous assessment tests throughout the term. *** In Algebra, there will be three CA tests with the weights on the final grade of Algebra indicated: 2 partial exam(15% each test) to be held in the weeks scheduled by the Centre for the practices of the first term, and a third global exam (all subject contents) that will take place on the date of the exam of the global assessment option. In addition, 10% of the final mark in Algebra will correspond to class work and exercises. *** In Statistics, there will be two CA tests with the weights on the final Statistics grade indicated: the first one for topics 1 and 2 (20%) to be taken upon completion of these topics, and the second one will be global (80%) and will take place on the date of the exam of the global assessment option. GLOBAL ASSESSMENT (GA). Students who wish to take the GA will only have a final exam in Algebra and another in Statistics at the end of the term, which will include the whole subject.	100	B3	C1	D2 D5 D6 D9
---------------------------------	---	-----	----	----	----------------------

Other comments on the Evaluation

Continuous Evaluation vs. Global Assessment. Students must choose between the Continuous Assessment (CA) and Global Assessment (GA) systems before the deadline established by the School.

Assessment 1st Opportunity. At the end of the term, once the continuous or global assessment exams have been completed, the student will have a grade out of 10 points for Algebra (A) and a grade out of 10 points for Statistics (S), which will represent 100% of the grade for each part. The final grade of the subject will be calculated as follows:

- If both grades A and S are greater or equal to 3.5, then the final grade will be $(A+S)/2$.
- If either grade A or S is less than 3.5, then the final grade will be the minimum of the amounts $(A+S)/2$ and 4.5.

A student will be given the grade of no-show if he/she does not sit for any of the CA or GA exams of the two parts of the subject after the deadline established by the center to decide between CA or GA; if, after that deadline, he/she sits for any test that corresponds to him/her according to that decision, he/she will be considered to have sat for it.

Assessment 2nd Opportunity. The evaluation of the students in the second edition of the minutes will be carried out by means of an exam of Algebra and another one of Statistics that will suppose 100% of the final grade of each part. To calculate the final grade of the subject the procedure described above will be applied. If at the end of the term (first edition of minutes) a student obtains a grade higher or equal to 5 points (out of 10) in one of the parts (Algebra or Statistics) then, in the second edition, he/she will be able to skip the final exam of that part and keep the grade obtained in the first edition.

Ethical commitment: The student is expected to present an appropriate ethical behaviour. In the case of detecting unethical behaviour (copying, plagiarism, use of unauthorized electronic devices, and others) it will be considered that the student does not meet the necessary requirements to pass the subject. In this case the overall grade for the current academic year will be a failing grade (0.0).

The use of any electronic device will not be allowed during the evaluation tests unless expressly authorized.

The fact of introducing an unauthorized electronic device in the exam room will be considered a reason for not passing the subject in the current academic year and the overall grade will be a fail (0.0).

Methodologies

	Description
Problem solving	The professor will resolve problems and exercises type and the student will have to resolve similar exercises.
Laboratory practical	They will employ computer tools to resolve exercises and apply the knowledges obtained in the classes of theory.
Lecturing	The professor will expose in the theoretical classes the contents gives the matter.

Personalized assistance

Methodologies	Description
Problem solving	The professor will attend personally the doubts and queries of the students.
Laboratory practical	The professor will attend personally the doubts and queries of the students.

Assessment

	Description	Qualification	Training and Learning Results		
Problem and/or exercise solving	They will make controls written and/or works. The weight of each one of them will not surpass 30% of the continuous evaluation.	60	B3 B4	C1	D1 D2 D6 D9 D14 D16
Essay questions exam	It will do a final examination on the contents of the whole of the matter.	40	B3 B4	C1	D1 D2 D9

Other comments on the Evaluation

The continuous eval. carry to cape on the previously exposed criteria. Those students that do not receive to the continuous eval be evaluated with a final examination on the contents of the whole of the matter, that will be the 100% of the note.

The continuous eval. of the students in second announcement consist in an examination on the contents of the whole of the matter, that will be 100% of the note.

Commitment:

"It expects that the present student a behaviour ethic o suitable. In case to detect a behaviour no-ethic o (copy, plagiarism, use of electronical devices unauthorised, and others) consider hat the student doesnt the necessary requirements to surpass the matter. In this case the calification in the present course will be of suspense (0.0)."

General description	This matter has like fundamental aim offer to the student a preliminary or introductory vision, of theoretical character-practical, relative to the nature and the operation of the business organisations and his relation with the surroundings in which they operate. For this, between other things, will define the term company from a multidimensional point of view that covers the complexity of his operation like open system. Later, we will analyse the relations of the company with his surroundings, and will go in the study of his main functional areas that contribute to the correct development of his activity.			

Training and Learning Results	
Code	
B9	CG9 Ability to organize and plan within the sphere of a company, and other institutions and organizations.
C6	CE6 Adequate knowledge of the concept of enterprise and institutional and legal framework of enterprises. Organization and Business Management.
D1	CT1 Analysis and synthesis.
D2	CT2 Problems resolution.
D7	CT7 Ability to organize and plan.
D18	CT18 Working in an international context.

Expected results from this subject		
Expected results from this subject	Training and Learning Results	
Know the role of the company in the field of economic activity.	C6	D18
Understand the basic aspects that characterize the different types of companies.	C6	D1 D18
Know the legal framework of the different types of companies.	C6	D1
Know the most relevant aspects of the organization and management in the company.	B9	C6 D1 D18
Acquire skills on the processes that affect business management.	B9	C6 D2 D7 D18

Contents	
Topic	
Subject 1: The COMPANY	1.1 The concept of company.1.2 The function of the company.1.3 The company like system.1.4 The surroundings of the company.1.5 The aims of the company.1.6 Classes of companies.

Subject 2: The FINANCIAL SYSTEM (PART I). ECONOMIC And FINANCIAL STRUCTURE OF THE COMPANY	2.1 economic Structure and financial of the company. 2.2 Bottom of rotation. 2.3 Cycle of exploitation and half Period of maduration. 2.4 Bottom of minimum rotation.
Subject 3: THE FINANCIAL SYSTEM (PART II). THE RESULTS OF THE COMPANY	3.1 The results of the company. 3.2 The profitability of the company. 3.3 The competitive strategy.
Subject 4: The FINANCIAL SYSTEM (PART III). INVESTMENT	4.1 Concept of investment. 4.2 Classes of investments. 4.3 Criteria for the evaluation and selection of investments.
Subject 5: The FINANCIAL SYSTEM (PART IV). FINANCE	5.1 Concept of source of finance. 5.2 Types of sources of finance. 5.3 Analyses of the solvency and liquidity of the company.
Subject 6: The SYSTEM OF PRODUCTION (PART I). GENERAL APPEARANCES	6.1 The system of production. 6.2 The efficiency. 6.3 The productivity. 6.4 Investigation, development and innovation (R&D)
Subject 7: The SYSTEM OF PRODUCTION (PART II). THE COSTS OF PRODUCTION	7.1 Concept of cost. 7.2 Classification of the costs. 7.3 The cost of production. 7.4 The margins of the company. 7.5 The threshold of profitability. 7.6 The threshold of production. 7.7 The operative leverage.
Subject 8: The SYSTEM OF COMMERCIALISATION	8.1 ¿What is the marketing? 8.2 basic Concepts. 8.3 The tools of marketing: Marketing-*mix.
Subject 9: The SYSTEM OF ADMINISTRATION	9.1 Components of the system of administration. 9.2 The system of direction. 9.3 The human system. 9.4 The cultural system. 9.5 The political system.
PRACTICES OF THE MATTER *The programming of the practical can experience changes in function of the evolution of the course.	Practice 1: Application of concepts of the subject 1. Practice 2: Application of concepts of the subject 1. Practice 3: Application of concepts of the subject 2. Practice 4: Application of concepts of the subject 2. Practice 5: Application of concepts of the subject 2. Practice 6: Application of concepts of the subject 3. Practice 7: Application of concepts of the subject 4. Practice 8: Application of concepts of the subject 5. Practice 9: Application of concepts of the subject 6. Practice 10: Application of concepts of the subject 7. Practice 11: Application of concepts of the subject 8. Practice 12: Application of concepts of the subject 9.

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	38.5	45.5	84
Problem solving	17.6	39.4	57

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Lesson *magistral with material of support and audiovisual means. Exhibition of the main contents of the matter so that the student can understand the scope of the same and facilitate his understanding.
Problem solving	Activity in which they formulate problems and/or exercises related with the subject. The student will have to pose and develop of individual form the suitable solutions by means of the application of the knowledges purchased related with the matter object of study.

Personalized assistance

Methodologies Description

Lecturing	The students will have occasion to attend to *tutorías *individualizadas with his professor. The procedure for *concertar these *tutorías will be communicated to the students by the professor to principle of course and will be published in the platform of teaching of the University. These *tutorías are allocated to resolve doubts and orient to the students on the development of the contents tackled in the theoretical classes, the practical classes and the works that can them entrust. In this section also includes the explanation to the students of any question on the proofs made along the course.
-----------	---

Assessment						
	Description	Qualification	Training and Learning Results			
Problem solving	In accordance with the educational planning of the academic course, the student will have to develop a determinate number of practices that include diverse exercises of application of the knowledges purchased in the classes of theory to concrete situations. These practices do not take part in the calculation of the qualification of the matter, but demands to the student obtain an exert minimum in the same for the *superación of the matter. The practices will carry out of face-to-face form being compulsory the assistance of the student to these classes.	0	B9	C6	D1 D2 D7 D18	
Objective questions exam	They will make diverse proofs along the course in which they will evaluate the knowledges, the skills and the competitions purchased by the students so much in the classrooms of theory as of practices.	100	B9	C6	D1 D2	

Other comments on the Evaluation

1. Ethical commitment:

The student is expected to exhibit appropriate ethical behavior. In the case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, for example) it will be considered that the student does not meet the necessary requirements to pass the subject. In that case, the overall grade for the current academic year will be a fail (0.0).

2. Continuous evaluation system:

Following the guidelines of the degree and the agreements of the academic commission, students taking this subject will be offered a continuous evaluation system. This system will be applicable to all students who have not expressly waived this evaluation criterion following the official channels established by the center.

The continuous evaluation will consist of three tests with the following characteristics:

- First test of the continuous evaluation: It will be carried out during the school period, in the week set by the center, and will consist of a multiple choice test that will cover all the contents seen up to the moment of its completion, both in the theory classes as in internships.
- Second test of the continuous evaluation: It will be carried out during the school period, in the week set by the center, and will consist of the development of several problems similar to those carried out in the practical classes.
- Third test of the continuous evaluation: It will be carried out on the date and time set by the center within the exam period and will consist of a multiple choice test that will cover all the contents seen throughout the course, both in the theory classes as in internships.

The grade obtained in the subject that will appear in the first edition of the report will be calculated as 30% of the grade obtained in the first test, plus 30% of the grade obtained in the second test, plus 40% of the grade obtained in the third test of the continuous evaluation.

However, to pass the subject, it will be essential to have passed 75% of the practices carried out throughout the course and obtain a minimum grade of 4 out of 10 in the third test of the continuous evaluation. If the two requirements are not met, the student will obtain a failing grade in the first edition of the report.

None of the continuous evaluation tests can be recovered unless justified and duly accredited by the student. On the other hand, the student has the right to know the grade obtained in each test within a reasonable period after its completion and to discuss the result with the teacher.

The grade obtained, both in the continuous evaluation tests and in the practical ones, will only be valid for the academic year in which they are carried out.

3. Global evaluation system:

Students who have expressly waived continuous evaluation following the official channels established by the center will be offered an evaluation procedure that allows them to achieve the highest grade.

This procedure will consist of a global evaluation exam, which will be carried out on the date and time set by the center management, and in which all the contents developed in the subject will be evaluated, both in the theory classes and in the practices. This global evaluation exam will consist of two parts: a theory test in multiple choice format, which will account for 30% of the final grade, and another practical test, which will account for the remaining 70%, and will consist of a series of exercises. develop. It is a necessary condition to pass the subject to obtain a minimum score of 5 out of 10 in the multiple choice test. If the student does not pass the multiple choice test, the student's final grade will be the one obtained in said test evaluated out of 3.

Only those students who do not complete any of the evaluation tests included in this teaching guide will be considered 'Not presented'.

4. About the July call:

The recovery call (July) will consist of a global evaluation exam that will account for 100% of the final grade and in which all the contents developed in the subject will be evaluated, both in theory classes and in practical classes. This exam will consist of two parts: a theory test in multiple choice format, which will account for 30% of the final grade, and another practical test, which will account for the remaining 70%, and which will consist of a series of exercises to be developed. It is a necessary condition to pass the subject to obtain a minimum score of 5 out of 10 in the multiple choice test. If the student does not pass the multiple choice test, the student's final grade will be the one obtained in said test evaluated out of 3.

5. Prohibition of use of electronic devices:

The use of any electronic device will not be permitted during the evaluation tests, unless expressly authorized. The fact of introducing an unauthorized electronic device into the exam room will be considered a reason for not passing the subject in the current academic year and the overall grade will be a fail (0.0).

4.- CAPACITANCE AND DIELECTRICS	4.1.- Capacitors and Capacitance. 4.2.- Capacitors in Series and Parallel. 4.3.- Energy Storage in Capacitors and Electric-Field Energy. 4.4.- Dielectrics, Molecular Model of Induced Charge, and Polarization Vector. 4.5.- Gauss's Law in Dielectrics. 4.6.- Dielectric Constant and Permittivity.
5.- CURRENT, RESISTANCE, AND ELECTROMOTIVE FORCE	5.1.- Electric Current. 5.2.- Current and Current Density. 5.3.- Ohm's Law and Resistance. 5.4.- Electromotive Force and Circuits. 5.5.- Energy and Power in Electrical Circuits. 5.6.- Basic Theory of Electrical Conduction.
6.- MAGNETIC FIELD	6.1.- Magnetic Field. 6.2.- Motion of Charged Particles in a Magnetic Field. 6.3.- Magnetic Force on a Current-Carrying Conductor. 6.4.- Force and Torque on a Current Loop. 6.5.- Biot-Savart's Law. 6.6.- Magnetic Field Lines and Magnetic Flux. 6.7.- Ampère's Law.
7.- MAGNETIC FIELD IN MATTER	7.1.- Magnetic Substances and Magnetization Vector. 7.2.- Ampère's Law in Magnetic Media. 7.3.- Magnetic Susceptibility and Permeability. 7.4.- Paramagnetism and Diamagnetism. 7.5.- Ferromagnetism.
8.- ELECTROMAGNETIC INDUCTION	8.1.- Induction Experiments. 8.2.- Faraday-Lenz's Law. 8.3.- Induced Electric Fields. 8.4.- Eddy Currents. 8.5.- Mutual Inductance. 8.6.- Self-Inductance and Inductors. 8.7.- Magnetic-Field Energy.
9.- THERMODYNAMIC SYSTEMS	9.1.- Classical Thermodynamics. 9.2.- Thermodynamic Systems and Classification. 9.3.- State Variables and State of a System. 9.4.- Equations of State. 9.5.- Thermodynamic Equilibrium. 9.6.- Change of State, Transformation or Process. 9.7.- Quasi-static Processes. 9.8.- State and Process Functions.
10.- TEMPERATURE AND HEAT	10.1.- Thermal Equilibrium, The Zeroth Law of Thermodynamics, and Temperature. 10.2.- Thermometers and Temperature Scales. 10.3.- Ideal Gas Thermometers and the Kelvin Scale. 10.4.- Heat. 10.5.- Calorimetry and Heat Capacities.
11.- THE FIRST LAW OF THERMODYNAMICS	11.1.- Work. 11.2.- Work Done During Volume Changes. 11.3.- Internal Energy. 11.4.- The First Law of Thermodynamics. 11.5.- Internal Energy of an Ideal Gas. 11.6.- Molar Heat Capacities of an Ideal Gas. 11.7.- Adiabatic, Isothermal, Isobaric and Isochoric Processes for an Ideal Gas. 11.8.- Enthalpy.

12.- THE SECOND LAW OF THERMODYNAMICS

- 12.1.- Directions of Thermodynamic Processes.
- 12.2.- Heat Engines, Refrigerators, and Heat Pumps.
- 12.3.- The Second Law of Thermodynamics: Clausius and Kelvin-Planck Statements.
- 12.4.- Carnot Engine.
- 12.5.- Carnot Theorems.
- 12.6.- Thermodynamic Temperature.
- 12.7.- Entropy.
- 12.8.- Increase of Entropy Principle.
- 12.9.- Entropy Change of an Ideal Gas.

LABORATORY

Practicals related to classroom topics will be carried out. They may include:

- 1.- How to Use a Multimeter. Ohm's Law. Direct Current. Circuit with Resistors.
- 2.- Linear and Non-Linear Conductors.
- 3.- Charge and Discharge of a Capacitor.
- 4.- Analysis of a Parallel Plate Capacitor with Dielectrics.
- 5.- Utilization of an Oscilloscope to Analyze Charge and Discharge Processes.
- 6.- Study of the Magnetic Field. Helmholtz Coils. Magnetic Moment. Hall Effect.
- 7.- Calorimetry. Water Equivalent of Calorimeter. Latent Heat of Fusion.
- 8.- Thermodynamics of the Ideal Gas. Heat Capacity Ratio. Adiabatic Work.

LABORATORY: UNSTRUCTURED ACTIVITY (OPEN LAB) SESSIONS

Optional activities:
Unstructured activity (open lab) sessions that cover the topics of the above cited regular laboratory sessions. A practical problem will be assigned to each team. Then, under the teacher's supervision, each team must analyse the problem, select a theoretical model and experimental means to obtain a solution.

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	24.5	45	69.5
Problem solving	8	20	28
Laboratory practical	18	18	36
Objective questions exam	1	0	1
Problem and/or exercise solving	3.5	0	3.5
Essay questions exam	3	0	3
Report of practices, practicum and external practices	0	9	9

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Lectures are given by the teacher on the contents of the subject, theoretical bases and / or guidelines of a work, exercise or project to be performed by the students.
Problem solving	Activity in which problems and / or exercises related to the subject are formulated. The student must develop the appropriate or correct solutions through the repetition of routines, the application of formulas or algorithms, the application of procedures for transforming the available information and the interpretation of the results. It is usually used as a complement to the lecture sessions.
Laboratory practical	Activities for applying the knowledge to particular situations and for the acquisition of basic and procedural skills related to the subject. They are developed in dedicated rooms with specialized equipment (laboratories, computer rooms, etc.).

Personalized assistance

Methodologies	Description
Lecturing	In office hours.
Laboratory practical	In office hours.
Problem solving	In office hours.
Tests	Description
Objective questions exam	In office hours.

Assessment				
	Description	Qualification	Training and Learning Results	
Objective questions exam	Tests for the assessment of acquired knowledge that include closed questions with different response options (true/false, multiple choice, matching of elements...). Students select a response among a limited number of choices.	10	B3	C2
Problem and/or exercise solving	Test in which the student must solve a series of problems and / or exercises in a time / conditions set by the teacher. In this way, the student should apply the acquired knowledge.	50	B3	C2 D2
Essay questions exam	Tests that include open questions on a topic. Students should develop, relate, organize and present knowledge on the subject in an argued response.	30	B3	C2
Report of practices, practicum and external practices	Preparation of a report by the students which reflects the characteristics of the work that has been carried out. Students must describe the developed tasks and procedures, show the results or observations made, as well as the data analysis and processing.	10	B3	C2 D9 D10

Other comments on the Evaluation

1. CONTINUOUS ASSESSMENT (EC)

Final mark G comprises the marks on the topics covered in the lectures (class test mark, weight 80%) and in the lab (laboratory mark, weight 20%).

1.1. CLASS TEST MARK

It will be obtained through two blocks of theoretical-practical tests, which we will refer to with the letters C (course) and F (final), each with a weight of 40% of G.

In the ordinary call, tests during the course (mark C0) and a final test (mark F1) will be taken. On the same day as the F1 test there will be an optional test C1 to replace C0, so that each student can choose between maintaining her/his mark C0 or taking the test to obtain a new mark C1 to replace C0.

The extraordinary call will comprise two tests, C2 and F2, equivalent in contents and assessment methodology (objective questions, essay questions and problem solving) to C1 and F1, respectively. In test C2, each student can choose between maintaining her/his previous mark from block C or taking the test to obtain a new mark to replace the previous one. In test F2, each student can choose between maintaining her/his previous mark from block F or taking the test to obtain a new mark to replace the previous one.

1.2. LABORATORY MARK

In the ordinary call, during the course you can obtain mark L0. This mark consists of two blocks, each with a weight of 10% of G: theoretical-practical tests (mark L0E), and practical reports (mark L0I): $L0 = L0E + L0I$. It is mandatory the attendance to all lab sessions to obtain the mark L0, otherwise, $L0 = 0.0$. On the same day as the F1 test there will be an optional theoretical-practical test L1 to replace L0, so that each student can choose between maintaining her/his previous mark L0 or taking the test to obtain a new mark L1 to replace L0.

In the extraordinary call there will be a theoretical-practical test L2, equivalent in contents and assessment methodology to L1. In test L2, each student can choose between maintaining her/his previous laboratory mark or taking the test to obtain a new mark to replace the previous one.

1.3. FINAL MARK

$$G = C (40\%) + F (40\%) + L (20\%)$$

where C is the most recent of the C block marks, F is the most recent of the F block marks, and L is the most recent of the laboratory marks.

2. GLOBAL ASSESSMENT (EG)

Only those students who have been granted a waiver of continuous assessment can opt for this assessment modality.

Final mark G comprises the marks on the topics covered in the lectures (class test mark, weight 80%) and in the lab (laboratory mark, weight 20%).

2.1. CLASS TEST MARK

It will be obtained through a theoretical-practical test (mark denoted by A1 in the ordinary call and by A2 in the extraordinary call). In test A2, each student can choose between maintaining her/his previous class test mark or taking the test to obtain a new mark to replace the previous one.

2.2. LABORATORY MARK

It will be obtained through a theoretical-practical test (mark denoted by L1 in the ordinary call and by L2 in the extraordinary call). In test L2, each student can choose between maintaining her/his previous laboratory mark or taking the test to obtain a new mark to replace the previous one.

2.3. FINAL MARK

$$G = A (80\%) + L (20\%)$$

where A is the most recent of the class test marks, and L is the most recent of the laboratory marks.

3. END-OF-PROGRAM CALL

The end-of-program call follows the same scheme as the global assessment, with the exception that there is only one exam.

Final mark G for the end-of-program call:

$$G = A (80\%) + L (20\%).$$

4. GENERAL RULES

To pass the course, a student must obtain a final mark equal to or higher than 5 (out of 10).

Students who do not take any of the tests (C, F, A, L) on the day of the final test will receive a grade of "no presentado" for that call.

Within the specifications detailed in the preceding sections, the tests may consist of different variants within the same classroom or laboratory group.

Ethical commitment: Every student is expected to behave in an appropriate ethical manner. Should unethical conduct be detected (copying, plagiarism, utilisation of unauthorised electronic devices, or others), the student will be considered not to have fulfilled the necessary requirements to pass the subject. In this case, the final mark in the corresponding edition of the academic record for the subject will be "suspense" (0.0).

Students should not have access to or use any electronic device during the tests and exams, unless specifically authorised. The mere fact of taking an unauthorised electronic device into the examination room will result in the student failing the subject and the final mark in the corresponding edition of the academic record for the subject will be "suspense" (0.0).

Recommendations

Other comments

Basic recommendations:

1. Basic knowledge acquired in the subjects of Physics and Mathematics in previous courses.
2. Oral and written comprehension.
3. Capacity for abstraction, basic calculus, and synthesis of information.
4. Skills for group work and communication.

In the event of discrepancy, the Spanish version of this syllabus prevails.

Problem and/or exercise solving	8	12	20

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Introductory activities	Activities directed to take contact, gather information on the students, creation of groups, tasks of organisation, as well as present the subject.
Practices through ICT	Activities of application of the knowledges to concrete situations and of acquisition of basic skills and process related with the matter object of study. They develop in special spaces with equipment facilitated by the School, and expects that each student have his own laptop or the facilitated by the School.
Problem solving	Analysis of a fact, problem or real event with the purpose to know it, interpret it, resolve it, generate hypothesis, contrast data, complete knowledges, diagnose it and train in alternative procedures of solution.
Previous studies	Reading and understanding by part of the student of some subjects or parts of subjects to deepen in the knowledge of the same in class.
Autonomous problem solving	Resolution by part of the student of the different type of problems posed, being able to identify the efficiency of each method of resolution proposed.
Lecturing	Exhibition by part of the professor of the contents on the matter object of study, theoretical bases and/or guidelines of a work, exercise or project to develop by the student.

Personalized assistance

Methodologies	Description
Problem solving	They will resolve the doubts posed by the students. Teachers' tutoring in the agreed format.
Practices through ICT	Attention in the laboratory to the doubts that present or will indicate him the way to be followed so that the person find the solution. Teachers' tutoring in the schedule and format stipulated.

Assessment

	Description	Qualification	Training and Learning Results
Practices through ICT	Group of proofs that include the solution of problems, exercises of practical type, and activities to resolve.	70	
Objective questions exam	Proofs for the evaluation of the competitions purchased that include questions with different alternative of answer (true/false, multiple election, ...)	15	B3 C3 D5
Problem and/or exercise solving	Resolution of practical exercises	15	

Other comments on the Evaluation

Ethical commitment:

Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorized electronic devices and others), then it will be considered that the student does not meet the minimum requirements to pass the course. In this case, the final grade for the current academic year will be failed (0.0).

In addition to the ethical commitment, the following is underlined:

In the first place, a person registered in the course is by default subject to the continuous assessment system; if the student does not want to be in this system, the he/she must expressly renounce to it within the established deadlines.

CONTINUOUS ASSESSMENT PROCEDURE

In the current academic year, continuous assessment will gather all learning evidence from the enrolled student and will be structured into three evaluations. These three assessments will preferably take place in computer labs; however, due to teaching organization needs, they may also be conducted in classrooms in handwritten format.

By default, students are enrolled in the continuous assessment system. To opt out, they must formally request to withdraw from it. If a student does not opt out, any missed assessments will be graded with a zero.

First Call (May/June):

To pass the course through continuous assessment, the following condition must be met:

$$(\text{Test 1} * 0.3 + \text{Test 2} * 0.4 + \text{Test 3} * 0.3) \geq 5$$

Therefore, a student is considered to have passed if they obtain a score of five or higher.

The assessments may consist of exams and/or assignments, meaning that a portion of the grade may be based on

submitted work and its evaluation.

Once the first assessment (Test 1) has been completed, the student may request to withdraw from the continuous assessment system (within the timeframe and through the means established by the course instructor). In this case, the student will follow the non-continuous assessment procedure.

Second Call (June/July):

If a student does not achieve a passing grade in the first call (May/June), they must take an exam covering 100% of the course content (10 points).

NON-CONTINUOUS ASSESSMENT PROCEDURE

This consists of an exam that allows students to obtain 100% of the final grade. The exam may be divided into sections with minimum score requirements.

First Call (May/June):

Students who have formally opted out of the continuous assessment system may take the exam scheduled for May/June (on the date and time set by the School Administration). This exam allows them to obtain 100% of the final grade. Students who failed the continuous assessment are not eligible to take this exam.

Second Call (June/July):

An exam will be offered to assess 100% of the course content for those who did not achieve the minimum passing grade in the first call.

The version of the guide was made in Spanish. For any doubt or contradiction, the Spanish guide will be mandatory.

General description	O obxectivo que se persegue con esta materia é que o alumno coñeza as técnicas básicas do cálculo integral en varias variables, cálculo *vectorial, ecuacións diferenciais ordinarias e as súas aplicacións.			

Resultados de Formación e Aprendizaxe

Code	
B3	CG3 Coñecemento en materias básicas e tecnolóxicas, que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacións.
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
C1	CE1 Capacidade para a resolución dos problemas matemáticos que poidan presentarse na enxeñaría. Aptitude para aplicar os coñecementos sobre: álgebra lineal; xeometría; xeometría diferencial; cálculo diferencial e integral; ecuacións diferenciais e en derivadas parciais; métodos numéricos; algorítmica numérica; estatística e optimización.
D1	CT1 Análise e síntese.
D2	CT2 Resolución de problemas.
D3	CT3 Comunicación oral e escrita de coñecementos.
D6	CT6 Aplicación da informática no ámbito de estudo.
D9	CT9 Aplicar coñecementos.
D15	CT15 Obxectivación, identificación e organización.
D16	CT16 Razoamento crítico.

Resultados previstos na materia

Expected results from this subject	Training and Learning Results		
Comprensión de os conceptos básicos de o cálculo integral en varias variables.	B3	C1	D1
Coñecemento de as principais técnicas de integración de funcións de varias variables.	B3 B4	C1	D1 D2 D9
Coñecemento de os principais resultados de o cálculo vectorial e aplicacións.	B3 B4	C1	D1 D2 D9
Adquisición de os coñecementos básicos para a resolución de ecuaciones e sistemas diferenciais lineais.	B3 B4	C1	D1 D2 D9

Comprensión de a importancia de o cálculo integral, cálculo vectorial e de as ecuaciones diferenciales para o estudo de o mundo físico.	C1	D9 D16
Aplicación de os coñecementos de cálculo integral, cálculo vectorial e de ecuaciones diferenciales.	C1	D2 D6 D9 D16
Adquisición de a capacidade necesaria para utilizar estes coñecementos en a resolución manual e informática de cuestións, exercicios e problemas.	C1	D1 D2 D3 D6 D9 D15 D16

Contidos

Topic

Integración en varias variables.	Integral dobre sobre rectángulos. Redución a integrais iteradas. Integral dobre sobre rexións elementais. Propiedades. Teorema de Fubini. Teorema do cambio de variable. Caso particular de coordenadas polares. Integral triple sobre unha caixa e sobre rexións elementais. Teorema de Fubini. Teorema do cambio de variable. Casos particulares: coordenadas cilíndricas e esféricas. Aplicacións xeométricas e físicas da integral múltiple: cálculo de volumes, centros de masa e momentos de inercia.
Cálculo vectorial	Curvas no plano e no espazo. Lonxitude de arco. Cambio de parámetro. Integral curvilínea ou de traxectoria con respecto á lonxitude de arco de campos escalares. Integral curvilínea ou circulación de campos vectoriales. Propiedades. Teorema fundamental das integrais de liña. Teorema de Green no plano. Superficies regulares. Plano tanxente. Vector normal. Área dunha superficie. Integral de superficie de campos escalares. Fluxo ou integral de superficie de campos vectoriales. Operadores diverxencia e rotacional. Caracterización de campos conservativos. Teorema de Stokes. Teorema de Gauss.
Ecuacións diferenciais	Ecuacións diferenciais ordinarias. Concepto de solución. Teoremas de existencia e unicidade para problemas de condición inicial. Métodos de resolución de ecuacións diferenciais ordinarias de primeira orde: en variables separables, reducibles a variables separables, homoxéneas, lineais e reducibles a lineais. Ecuacións diferenciais exactas. Factores integrantes. Ecuación diferencial dunha familia uniparamétrica de curvas planas. Traxectorias ortogonais. Ecuacións diferenciais lineais de orde 2. Problemas de condición inicial. Conxuntos fundamentais. Método de variación de parámetros. Método de coeficientes indeterminados. Redución de orde. Ecuación de Euler. Sistemas de ecuacións diferenciais lineais de orde 1.
Métodos numéricos para problemas de valor inicial	Introdución aos métodos numéricos. Métodos de Euler e Euler mellorado. Método de Runge-Kutta de orde 4.

Planificación

	Class hours	Hours outside the classroom	Total hours
Lección maxistral	32	60	92
Resolución de problemas	22	24	46
Prácticas de laboratorio	6	0	6
Exame de preguntas de desenvolvemento	3	0	3
Traballo	3	0	3

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

	Description
Lección maxistral	O profesor exporá nas clases teóricas os contidos da materia. Os alumnos terán textos básicos de referencia para o seguimento da materia.
Resolución de problemas	O profesor resolverá problemas e exercicios e o alumno terá que resolver exercicios similares para adquirir as capacidades necesarias.
Prácticas de laboratorio	Empregaranse ferramentas informáticas para resolver exercicios e aplicar os coñecementos adquiridos.

Atención personalizada

Methodologies	Description
Resolución de problemas	O profesor atenderá persoalmente as dúbidas e consultas dos alumnos, en especial nas clases de problemas e laboratorio e en tutorías.
Prácticas de laboratorio	O profesor atenderá persoalmente as dúbidas e consultas dos alumnos, en especial nas clases de problemas e laboratorio e en tutorías.

Avaliación					
	Description	Qualification	Training and Learning Results		
Resolución de problemas	Realizaranse dous parciais (P1 e P2). O peso de cada un deles suporá o 25% da avaliación continua.	50	B3 B4	C1	D1 D2 D3 D6 D9 D15 D16
Exame de preguntas de desenvolvemento	Realizarase un exame final (EF) sobre os contidos de toda a materia. O peso deste exame será dun 40% para o alumnado que opte por avaliación continua e do 100% para quen non se acolla a esta.	40	B3 B4	C1	D1 D2 D3 D6 D9 D15 D16
Traballo	En cada grupo proporanse diversos exercicios ou tarefas adicionais (EJC) que terán un peso conxunto dun 10% da nota de avaliación continua.	10	B3 B4	C1	D1 D2 D6 D16

Other comments on the Evaluation

A nota de avaliación continua obterase sumando as notas P1, P2, EF e EJC ponderadas según o seu peso. Isto é, se cada proba P1, P2, EF e EJC está puntuada sobre 10, entón

$$\text{NOTA EC} = P1 \cdot 0.25 + P2 \cdot 0.25 + EJC \cdot 0.1 + EF \cdot 0.4.$$

A nota final do alumnado na primeira edición da acta calcularase como o máximo entre a nota obtida mediante avaliación continua e a nota do exame final:

$$\text{NOTA FINAL} = \text{MAX}\{\text{NOTA EC}, \text{EF}\}.$$

En consecuencia, a nota do alumnado que non se acolla a avaliación continua será a do exame final. Quen non se presente ao exame final da materia obterá a calificación de NON PRESENTADO.

A avaliación na segunda oportunidade consistirá nun único exame sobre os contidos da materia que supoñerá o 100% da nota.

Compromiso ético:

Espérase que o alumnado presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (por exemplo, copia, plaxio, utilización de aparellos electrónicos non autorizados) considerarase que non reune os requisitos necesarios para superar a materia. Neste caso, a calificación global da materia no presente curso académico será de suspenso con calificación numérica de 0.

General description	This is a basic subject, common for all levels of the industrial fields studies. At the end of the course the students will have a basic knowledge about the principles of general chemistry, organic chemistry and inorganic chemistry, and its application to Industry. This knowledge will be further applied and expanded in other areas of the studies.			

Training and Learning Results				
Code				
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.			
C4	CE4 Ability to understand and apply the basic knowledge of general chemistry, organic chemistry and inorganic chemistry, and their applications in engineering.			
D2	CT2 Problems resolution.			
D10	CT10 Self learning and work.			
D17	CT17 Working as a team.			

Expected results from this subject				
Expected results from this subject			Training and Learning Results	
Knowing the chemical bases of industrial technologies. Specifically, the student will gain basic knowledge of general, organic and inorganic chemistry and their applications in engineering. This will allow the student to apply the basic concepts and fundamental laws of chemistry. Due to theoretical-practical training, the student will be able to effectively carry out lab experiments and to solve basic chemistry exercises.			B3	C4

				D17

Contents	
Topic	

1. Atomic theory and chemical bonding	1.1 Atomic theory: Particles of the atom: Electron, proton et neutron. Characteristics of the atom: Atomic number and Atomic mass. Isotopes. Stability of the nucleus: Radioactivity (natural and artificial). Evolution of the atomic theory. 1.2. Chemical bonding: Definition. Intramolecular bonding: Covalent bonding and ionic bonding. Polyatomic molecules: hybridization and delocalization of electrons. Intermolecular bonding: Types of intermolecular forces.
2. States of aggregation: Solids, gases, pure liquids and solutions	2.1. Solid state: Introduction. Classification of solids: amorphous solids, molecular crystals and liquid crystals, Covalent crystals and ionic crystals. 2.2. Gaseous state: Characteristics of the gas phase. Ideal gases: Equation of state. Real gases: Equation of state. Properties of gases. 2.3. Liquid state: Characteristics of the liquid phase: physical properties (density, surface tension, viscosity). Changes of state. Phase diagram. Solutions: colligative properties
3. Thermochemistry	3.1. Heat of reaction: Definition of Enthalpy and Internal Energy. Enthalpy of reaction. Temperature Dependence of Enthalpy Changes. Enthalpy of formation. Determination of the reaction enthalpy: direct method. State Function and Hess's Law. 3.2. Entropy: Definition. Calculus. 3.3. Free energy: Definition. Calculus. The Criterion of Evolution.
4. Chemical equilibrium: in gas phase, acid-base-base, redox, solubility	(4.1. Chemical equilibrium: Concept of Equilibrium. Equilibrium Constant. Types of equilibrium. The Le Chatelier Principe. 4.2. Acid-base Equilibrium: Definition of acid and base. Autoionization of water. Ionic Product. Concept of pH and pOH. Strength of acids and bases: Polyprotic acids. Amphoters. pH calculation. Acid-base titration. Buffer solutions. 4.3. Redox equilibrium: Concept of oxidation, reduction, oxidising agent, reducing agent. Balance of redox reactions in acid and alkaline media. Redox titration. Electrochemical cells: basic concepts and redox potential. Thermodynamics of electrochemical reactions: Gibbs Energy and cell Potential. Nernst Equation. Faraday's Laws. 4.4 Solubility equilibrium: Soluble salts: Hydrolysis. Sparingly soluble salts: solubility and solubility product. Factors affecting solubility. Fractional Precipitation. Complex Salts: Definition, properties, dissociation and importance.
5. Chemical kinetics	5.1. Basic Concepts: Reaction Rate. Reaction Order. Kinetic Constant. Rate Equation. 5.2. Determination of the Rate Equation: Initial rate method. Integrated Rate Laws. 5.3. Factors affecting the Reaction Rate.
6. Basic principles of Organic Chemistry	6.1. Fundamentals of Organic formulation and functional groups: 6.1.1. Structure of the organic compounds: Alkanes, alkenes and alkynes. Aromatic Hydrocarbons. 6.1.2. Alcohols and phenols. 6.1.3. Ethers. 6.1.4. Aldehydes and ketones. 6.1.5. Esters. 6.1.6. Carboxylic acids and derivatives. 6.1.7. Amines and nitro-compounds.
7. Basic principles of Inorganic Chemistry.	7.1. Metallurgy and the Chemistry of Metals: Abundance of metals. Nature of the metallic bond, properties. Theory of the Conduction Band: conducting materials, semiconductors and superconductors. Metallurgical processes: iron and steel. 7.2. Non-metallic elements and their compounds: General properties. Hydrogen. Carbon. Nitrogen and phosphorous. Oxygen and sulphur. Halogens.

8. Applied Electrochemistry	8.1. Applications of the Nernst equation: Determination of pH, Equilibrium constant, solubility product. 8.2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes. Electrolysis Cells. 8.3. Industrial Processes of electrolysis: electrodeposition (electroplating), electrometallurgy, electrolysis chlorine-caustic soda. Fuel cells.
9. Corrosion and treatment of Surfaces	9.1. Basic principles of Corrosion: the corrosion cell. 9.2. Corrosion of metals. 9.3. Corrosion rate. 9.4. Types of Corrosion. 9.5. Protection against Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings.
10. Electrochemical sensors	10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors: medicine, industry, environment.
11. Petroleum and derivatives. Petrochemistry	11.1. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Drilling and crude oil extraction. 11.5. Fractioning of oil. 11.6. Cracking, alkylation, reforming and isomerisation of hydrocarbons. 11.7. Treatment of sulphurous compounds and refining units.
12. Carbon: Carbochemistry	(12.1. Formation of carbon. 12.2. Types of carbons and their constitution. 12.3. Technological uses of carbon. 12.4. Pyrogenation of carbon. 12.5. Hydrogenation of carbon. 12.6. Direct liquefaction of carbon. Gasification.

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	32	45	77
Problem solving	10	12	22
Laboratory practical	5.4	7.6	13
Autonomous problem solving	0	25.5	25.5
Objective questions exam	1	0	1
Problem and/or exercise solving	3	0	3
Report of practices, practicum and external practices 1		7.5	8.5

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Presentation by the faculty member of the theoretical content of the subject using audiovisual media.
Problem solving	Activity in which problems and/or exercises related to the subject will be formulated. Students should develop appropriate solutions by applying formulas or algorithms to manage the available information and interpret the results.
Laboratory practical	Activities of application of the theoretical background to specific situations, aimed to the acquisition of basic skills related to the subject. Will be developed in the laboratories or computer rooms of the center in which subject is given. Those rooms will be equipped with the necessary specialized equipment.
Autonomous problem solving	Activity in which the teacher formulates problems and/or exercises related to the subject, and the student must develop the analysis and resolution in an autonomous way.

Personalized assistance

Methodologies	Description
---------------	-------------

Lecturing	Any doubt related with the contents given in the mater sessions will be clarified.
Problem solving	Any doubt related with the problems resolved in the seminars of problems will be answered.
Laboratory practical	Any doubt related with the laboratory practices will be answered.

Assessment				
	Description	Qualification	Training and Learning Results	
Autonomous problem solving	Students must solve independently, and periodically submit problems or exercises formulated by the faculty member. The results and the procedure followed in the execution will be evaluated. According to current legislation, the final grade will be numeric and between 0 and 10.	10	B3 C4 D2	D10
Objective questions exam	The purpose of these tests, is to assess the level of theoretical knowledge acquired by students in classroom sessions. Written tests (one or more) are multiple choices, multiple responses, in which students can achieve a numerical score between 0 and 10, according to current legislation.	40	B3 C4 D10	
Problem and/or exercise solving	The evaluation of the knowledge gained by students in seminars will be through a written exam, in the official announcement of examinations, in which the student must solve 4 or 5 problems related to the subject under study. The exam will be graded according to the current legislation, with a numerical final grade between 0 and 10.	40	B3 C4 D2	D10
Report of practices, practicum and external practices	After each laboratory session, the student should answer an oral question or prepare a detailed report including aspects such as objective and theoretical foundations, procedure followed, materials used, results and interpretation. The aspects considered in the evaluation are the content of the report, the understanding of the work done, the ability of summarising, quality of presentation, and the personal contribution. The final score, between 0 and 10, will be the average of the marks obtained in the various reports made and/or writing or oral test that could be done for each practice.	10	C4 D17	

Other comments on the Evaluation

The objective questions tests for theory content, and the exercises examen, will be considered for the final score weighting only when both the average grade of the multiple-choice test and the grade of the exercises examen rated greater than or equal to 4. Although the average score could be equal to or greater than 5, if the average qualification of the objective questions tests for theory content or the exercises exam is lower than 4, the final score will be the lowest mark obtained (which is the one that does not permit to calculate the average mark). The attendance to any lab session or any seminar test means that the student is being evaluated and therefore a qualification of "not presented" is no longer possible.

Those students who make a renunciation to the continuous evaluation will be evaluated by the final exam, to be held in the official date for the two calls. The final qualification will consist of a 50% of exercises and a 50% of theory (test-type) exam. A rate equal to or greater than 4 in both parts is necessary in order to pass the exam.

In the second call, an objective questions test for theory content and an exercises examen will be carried out. The marks of lab experiments, autonomous problem solving, and marks of average of objective questions tests for theory content or exercises exam higher than 5 obtained in the first call will be kept for the second call.

Ethical commitment:

The student is expected to present an adequate ethical behavior. If an unethical behavior is detected (copying, plagiarism, unauthorized use of electronic devices, and others) it is considered that the student does not meet the requirements for passing the subject. In this case, the final grade in the current academic year will be FAIL (0.0 points).

The use of electronic devices during the assessment tests will be not permitted. Introducing an unauthorized electronic device into the examination room, will be considered as a FAIL (0.0 points) in the current academic year.

D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.

Expected results from this subject	
Expected results from this subject	Training and Learning Results
It comprises the fundamental concepts of link, structure and microstructure of the distinct types of materials	B3 C9 D10
It comprises the influence of the microstructure of the material on its mechanical , electrical, thermal and magnetic behaviour	B3 C9
It comprises the mechanical behaviour of the metallic, ceramic, plastics and composite materials.	B4 B6
It knows how to modify the material properties by means of mechanical processes and thermal treatments	B4 C9 D9
It knows the basic structural characterisation techniques for materials.	B3 B6 C9
To acquire skills in the handle of the diagrams and charts	D1
To acquire skills in the realisation of tests	B6 C9 D10
It analyses the results obtained and extracts conclusions from them	D1 D5 D9
It is able to apply norms of materials testing	B6 D1 D9

Contents	
Topic	
Introduction	Introduction to Materials Science and Technology. Classification of materials. Terminology. Guidelines for the proper follow-up of the course.
Crystalline arrangement.	Crystalline and amorphous solids. Crystalline lattices, characteristics and imperfections. Allotropic transformations.
Properties of materials. Laboratory practicals.	Mechanical, chemical, thermal, electric and magnetic properties. Standards for materials analysis. Compressive and tensile deformation. Principles of fracture mechanisms. Toughness. Hardness. Main mechanical test methods. Introduction to metallography. Binary isomorphous and eutectic systems. Microstructure in eutectic alloys. Analyses of practical situations.
Metallic materials.	Solidification. Constitution of alloys. Grain size. Main binary phase diagrams. Processing. Carbon steels: classification and applications. Cast iron alloys. Heat treatments: aims, fundamentals and classification. Annealing, normalizing, quenching and tempering. Nonferrous alloys.
Plastic materials	Classification according to the molecular structure: Thermoplastics, thermosets and elastomers. Properties and testing methods. Forming processes. Introduction to the Composite Materials.
Ceramic materials	Classification and properties. Glasses and traditional ceramics. Technical Ceramics. Cements: phases, types and main applications. Concrete. Processing of ceramic materials.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Introductory activities	A presentation of the course is made: contents, organization, methodologies to be used, schedule and evaluation system. Emphasis is placed on student participation and the personalized tutoring system.
Lecturing	During the course, the teacher exposes the main contents, encouraging the active participation of the students. Exercises and type problems are solved, and hands on science methodology will be also applied.
Laboratory practical	Activities for the practical application of the knowledge acquired in the theoretical sessions. They are performed in the laboratory with specialized equipment and in accordance with applicable standards
Autonomous problem solving	Throughout the course, students will be offered different set of problems and questions that they will have to solve by themselves, demonstrating the capacity for learning and developing autonomous work.
Mentored work	The instructor will propose several projects to be carried out in small groups. The projects will be related to the characterization of materials commonly used in technological applications. Students must complete a revision of the literature concerning to the topic of the project, revise the existing standards and other sources of information. Finally, the project must be exposed to the instructor and to their classmates.

Personalized assistance	
Methodologies	Description
Lecturing	The teacher will guide and resolve any doubts that the student may have in relation to the contents explained in the lectures.

Laboratory practical	The laboratory teacher will guide the students in the development of the practical classes, clarifying their doubts and guiding them to achieve the best understanding of the practical classes
Mentored work	During the development of the tasks proposed to be done in small groups, the students will have the guidance and help of the teacher
Tests	Description
Report of practices, practicum and external practices	The laboratory teacher will guide the students in the resolution of the questions formulated in the practical classes and will help in the doubts that may arise in the writing of the practical reports.
Self-assessment	The teacher will design the self-assessment tests that the student can take throughout the course, and will guide the students in their completion, solving the technical questions that may arise

Assessment					
	Description	Qualification	Training and Learning Results		
Report of practices, practicum and external practices	Attendance and student participation in practical classes will be evaluated. The reports from the practical sessions will be assessed, which will include the results obtained from the conducted experiments, as well as the response to the questions asked..	5	B6	C9	D9
Presentation	The work carried out by the students in small groups will be evaluated through its public defense, using a rubric that will be presented beforehand. The information provided, consulted bibliography, organization of the content, clarity in the presentation, and the responses given in the final debate with the teacher and the rest of the students will be taken into account.	10	B4 B6	C9	D1 D5 D10
Objective questions exam	This written test will assess the learning gain and competence of students in the laboratory practical part of the course. It will consist of questions and exercises.	15	B3 B4 B6	C9	D1 D5 D9 D10
Objective questions exam	Partial exam I: There will be a first written test in which the knowledge acquired by students in the theory sessions of the subject will be assessed. It will be conducted approximately in the middle of the semester.	30	B3 B4 B6	C9	D1 D5 D9 D10
Objective questions exam	Partial exam II: Second written test in which the knowledge acquired by students in the theory sessions of the subject will be evaluated. It will take place on the official date of the 1st edition of the exam set by the EEI coordination.	40	B3 B4 B6	C9	D1 D5 D9 D10

Other comments on the Evaluation

Continuous assessment: (default assessment system) involves ongoing evaluation throughout the semester including different assessments, as indicated in the table above which also includes the score of each test in the final mark. A summary is shown below:

- 5% laboratory practice report submitted, attendance, and participation in practical classes.
- 10% Oral presentation of group work.
- 15% Written examination of the practical part.
- 30%* Partial Exam I: 1st partial exam of theory content (It will take place in one of the theory sessions on a previously indicated date). **A minimum is required.**
- 40%* Partial Exam II: The knowledge acquired in the second part will be assessed, however, an overall understanding of the subject will be required. (it will take place on the date officially set by the EEI for the first attempt or edition). **A minimum is required.**
- * Students who take the second attempt will keep the marks obtained in the laboratory practical assessments. The theoretical knowledge of the subject will be evaluated in a single exam (covering the syllabus evaluated in Partial Exams I and II) that will be assessed with 70% of the total grade. **A minimum is required.**

Global or comprehensive assessment in the two official attempts: Students who waive continuous assessment, in accordance with the procedures and deadlines established by the institution, will have the option to take a single written exam covering all the content of the subject, both theoretical and practical, on the official dates. This test will be graded with a weight of 100% towards the final grade.

If the minimum in Partial Exam I is not reached, the option of Global assessment can also be chosen by applying in writing within the deadline set by the responsible teachers.

To pass the course, according to the assessment system: - Continuous assessment:

- In the first attempt: The sum of scores from different tests must reach a minimum of **5 out of 10**, and a **minimum of 40%** must be obtained **in** each of the **Partial exams**, i.e. **1.2** points **for Partial I** and **1.6** points **for Partial II**. Alternatively, the **minimum** can be **45%** considering the two **Partial exams together**, i.e. **3.15** points out of **7**.
- In the second attempt: The sum of scores from different tests must reach a **minimum of 5 out of 10**, and obtaining a **minimum of 45%** of the grade of the exam, that is: **3.15 point out of 7**.
- **If the required minimums are not reached, the grade that will appear in the transcript will be a maximum of 4.5 points.**

- **Comprehensive evaluation:** A minimum score of 5 out of 10 must be achieved.

Extraordinary Call (September): will take place on the official date. A comprehensive assessment will be performed by means of a single written exam covering all theoretical and practical contents (100% of the final grade). **Ethical Behavior:** students are expected to behave in an ethical manner in all aspects of their work, especially in accordance with the provisions of Articles 39, 40, 41 and 42 of the Regulation on the evaluation, grading and quality of teaching and the learning process of students at the University of Vigo, approved by the University Senate on 18 April 2023). **Warning:** If there is any mismatch between the contents of the 3 language versions of this teaching guide, those included in the Spanish version will be considered valid.

Contents

Topic	
SUBJECT 1. INTRODUCTION And AXIOMS	1.1 Magnitudes and units. 1.2 References of polarity. 1.3 Concept of electrical circuit. 1.4 Axioms of Kirchhoff.

SUBJECT 2. ANALYSIS OF LINEAR CIRCUITS RESISTIVES	2.1 Ideal Elements: definition, representation and mathematical model. 2.2 Models of real sources. 2.3 Equivalent Dipoles: conversion of sources. 2.4 Association of resistors: concept of voltage divider and current divider. 2.5 Association of sources and resistors. 2.6 Topological Concepts: knot, branch, bow and mesh. 2.7 Number and election of circular and nodal equations linearly independent. 2.8 Analyses by meshes and knots of circuits with resistors. 2.9 Topological Transformations. 2.10 Power and energy in resistors, ideal sources and real sources. 2.11 Fundamental theorems.
SUBJECT 3. ANALYSIS OF CIRCUITS WITH ELEMENTS THAT STORE ENERGY	3.1 ideal Condenser: definition, representation and mathematical model. 3.2 magnetic Circuits: units, magnetic flow, strength magnetomotive and reluctance. 3.3 ideal Coil: definition, representation and mathematical model. 3.4 Association series and parallel of coils and capacitors. 3.5 Circuits with elements that store energy. Circuits RL, RC and RLC.
SUBJECT 4. ANALYSIS OF CIRCUITS IN *SINUSOIDAL STEADY-STATE REGIME	4.1 Forms of periodic wave and values associated: sinusoidal wave. 4.2 Determination of the sinusoidal steady-state regime. 4.3 Response of the basic passive elements to sinusoidal excitations: concept of impedance and complex admittance. 4.4 Law of Ohm and axioms of Kirchhoff in sinusoidal steady-state regime. 4.5 Association of elements. 4.6 Analyses by knots and by meshes of circuits in sinusoidal steady-state regime. 4.7 Power and energy in sinusoidal steady-state regime. Instantaneous power, half or active power and energy in the passive elements: coils, capacitors, resistances and complex impedances. 4.8 Power and energy in the dipoles. Apparent power, reactive power and complex power. 4.9 Theorem of conservation of the complex power (theorem of Boucherot). 4.10 The power factor and his importance in the electrical systems. Correction of the power factor. 4.11 Measurement of the active and reactive power: wattmeters and varmeters. 4.12 Fundamental Theorems in sinusoidal steady-state regime.
SUBJECT 5: MAGNETIC ADJUSTMENTS	5.1 Magnetic joined up coils: definitions, equations of flows, own and mutual inductances. Representations and mathematical models. 5.2 Analyses by meshes of circuits of alternating current with coils joined up.
SUBJECT 6: BALANCED THREE-PHASE SYSTEMS	6.1 Introduction. Three-phase voltage system. Sequence of phases. 6.2 Generators and three-phase loads: star and triangle connections. Voltages and currents. 6.3 Equivalent transformations star-triangle. 6.4 Analyses of balanced three-phase systems. Equivalent single-phase circuit. 6.5 Power in balanced three-phase systems. Compensation of the power factor.
SUBJECT 7. ELECTRICAL MACHINES	7.1 Transformer and autotransformers. 7.2 Rotational electrical machines: synchronous machine, asynchronous machine and DC machines.
PRACTICES	1. Use of lab equipments. Security requirements 2. Measures in resistive circuits. 3. Introduction to the analysis and simulation of circuits by means of Matlab. 4. Determination of a linear model of a real coil with core of air. Real coil with core of iron. Cycle of magnetic hysteresis. 5. Simulation of transient regime by means of Matlab. 6. Measures of active and reactive power in monophasic systems. Compensation of the power factor.

Planning			
	Class hours	Hours outside the classroom	Total hours
Laboratory practical	20	10	30
Problem solving	10	10	20

Autonomous problem solving	0	20	20
Lecturing	22	44	66
Essay questions exam	4	0	4
Essay questions exam	2	0	2
Report of practices, practicum and external practices	0	10	10

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Laboratory practical	It will be performed circuit assembly corresponding to the knowledges acquired in class of theory, or it will be seen in the laboratory complementary aspects not treated in the theoretical classes.
Problem solving	It will solved type problems and exercises in class of big groups and the student will have to solve similar exercises.
Autonomous problem solving	The student will have to solve on his own a series of exercises and questions of the matter proposed by the professor.
Lecturing	The professor will explain in the classes of big groups the contents of the matter.

Personalized assistance

Methodologies	Description
Problem solving	The professor will attend personally the doubts and queries of the students during the tutorial hours.
Laboratory practical	The professor will attend personally the doubts and queries of the students during the tutorial hours.

Assessment		Qualification		Training and Learning Results
	Description			
Essay questions exam	EC1 Test: It will be conducted during the week fixed by the EEI for the continuous assessment (CA) tests. The content covered in the classroom/laboratory up to that date will be evaluated. It accounts for 40% of the Final Grade.	40	B3 C10	D2 D10 D14
Essay questions exam	EC2 Test: It will be conducted on the final exam day corresponding to the 1st opportunity, fixed by the EEI. It will evaluate the remaining course content not covered in the EC1 test. It accounts for 40% of the Final Grade.	40	B3 C10	D2 D10 D14
Report of practices, practicum and external practices	It will be valued positively the realisation of a memory of each one of the practices of laboratory that will include: objectives, procedure followed, material employed, results obtained and interpretation of them. The realisation of practices and the presentation of the memories, form part of the process of continuous evaluation of the student. However, the students that have not realised the practices along the course, or wish to improve the mark obtained, will be able to opt to realise an additional written examination with questions regarding the development of the practices and to the educational contents explained during them. The value of this exam is the 20% of the final mark, in the same way as the continuous evaluation.	20	C10	D2 D6 D10 D14 D17

Other comments on the Evaluation

CONTINUOUS ASSESSMENT (CA).

Together with the EC2 test, students who wish to may take a recovery test for the content evaluated in EC1 or keep the previously obtained grade.

$$\text{Final Grade 1st opportunity} = (\text{Nota_EC1} + \text{Nota_EC2}) * 0.4 + \text{Nota_ECL} * 0.2$$

where, Nota_EC1, Nota_EC2, and Nota_ECL are, respectively, the grades of the EC1 and EC2 tests and the lab work grade, evaluated on a scale from 0 to 10 points.

In the second opportunity call, students who have not opted out of the continuous assessment can keep the grade obtained in EC1 or EC2 during the 1st opportunity or take a recovery test for the part or parts they wish (EC1, EC2).

$$\text{Final Grade 2nd opportunity} = (\text{Nota_EC1} + \text{Nota_EC2}) * 0.4 + \text{Nota_ECL} * 0.2$$

To pass the course, the Final Grade must be at least 5.0 points.

Each new enrollment in the course implies resetting the continuous assessment grades obtained in previous years.

GLOBAL ASSESSMENT (GA).

Students who opt-out of the continuous assessment must take a written EGA test on the date established by the EEI for the

1st opportunity, which will account for 80% of the Final Grade, evaluating the content covered in classroom sessions, and a written EGL test, accounting for 20% of the Final Grade, evaluating the competencies covered in practical sessions.

Final Grade 1st opportunity = $\text{Nota_EGA} * 0.8 + \text{Nota_EGL} * 0.2$

In the 2nd opportunity in June-July, the assessment will be carried out in the same way. There will be a written EGA test accounting for 80% of the Final Grade and an EGL test accounting for 20% to evaluate the content covered in practical sessions.

Ethical commitment:

It expects that the present student a suitable ethical behaviour. In the case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, for example) it will be considered the student does not gather the necessary requirements to surpass the matter. In this case the global qualification in the present academic course will be of suspense (0.0).

It will not be allowed the utilisation of any electronic device during the proofs of evaluation except with explicit permission. The fact to enter an unauthorised electronic device in the classroom of examination will be considered reason of no surpass the matter in the current academic course and the global qualification will be of suspense (0.0).

Recommendations

Other comments

It is very recommended that the students have sufficient knowledge of the algebra of the complex numbers, linear algebra, linear differential equations and have attended to the subject of Physics along the whole first course.

Requirements: To enrol in this matter it is necessary to have surpassed or be enrolled of all the matters of the inferior courses to the course in which it is situated this matter.

General description	Esta materia proporcionará ao alumno coñecementos dos fundamentos básicos da Teoría de Máquinas e Mecanismos e a súa aplicación no campo da enxeñaría Mecánica. Achegaralle coñecementos sobre os conceptos máis importantes relacionados coa teoría máquinas e mecanismos. Coñecerá e aplicará as técnicas de análises *cinemático e dinámico para sistemas mecánicos, tanto gráficas e analítica, como mediante a utilización eficaz de software de simulación. Así mesmo servirá de introdución a aspectos sobre maquinaria que abordará en materias de cursos posteriores da Titulación.			

Resultados de Formación e Aprendizaxe

Code	
B3	CG3 Coñecemento en materias básicas e tecnolóxicas, que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacións.
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
C13	CE13 Coñecemento dos principios de teoría de máquinas e mecanismos.
D2	CT2 Resolución de problemas.
D6	CT6 Aplicación da informática no ámbito de estudo.
D9	CT9 Aplicar coñecementos.
D10	CT10 Aprendizaxe e traballo autónomos.
D16	CT16 Razoamento crítico.

Resultados previstos na materia

Expected results from this subject	Training and Learning Results		
□ Coñecer os fundamentos básicos da Teoría de Máquinas e Mecanismos e a súa aplicación na Enxeñaría Mecánica para resolver os problemas relacionados coa devandita materia no campo da Enxeñaría Industrial.	B3	C13	D2
□ Coñecer, comprender, aplicar e practicar os conceptos relacionados coa Teoría de Máquina e Mecanismos	B4		D6
□ Coñecer e aplicar as técnicas análises *cinemático e dinámico de sistemas mecánicos.			D9
□ Coñecer e utilizar eficazmente software de análise de mecanismos.			D10
			D16

Contidos

Topic	
Introdución á Teoría de máquinas e mecanismos.	Introdución. Definición de máquina, mecanismo e cadea cinemática. Membros e pares cinemáticos. Clasificación. Esquemmatización, modelización e simboloxía. Mobilidade. Graos de liberdade. Síntese de mecanismos.
Análise xeométrica de mecanismos.	Introdución. Métodos de cálculo da posición. Ecuacións de peche de circuito.

Análise cinemática de mecanismos.	Fundamentos. Métodos gráficos. Métodos analíticos. Métodos matriciais.
Análise estática de mecanismos.	Fundamentos. Redución de forzas. Método dos traballos/potencias virtuais.
Análise dinámica de mecanismos.	Fundamentos. Dinámica xeral de máquinas. Traballo e potencia en máquinas. Dinámica do equilibrado.
Mecanismos de leva.	Fundamentos xerais. Levas Planas. Síntese de levas.
Mecanismos de transmisión.	Fundamentos. Mecanismo de engrenaxes. Outros mecanismos.

Avaliación

	Description	Qualification	Training and Learning Results		
Resolución de problemas	Formularanse unha ou varias probas de resolución de problemas ao longo do cuadrimestre. Estas probas poderán realizarse a través da plataforma Moovi (de maneira virtual) ou presencialmente no horario establecido polo centro. A celebración destas probas será programada con suficiente antelación e de acordo coa normativa vixente.	30	B3 B4	C13	D2 D6 D9 D10 D16
Prácticas de laboratorio	Resolución e entrega das tarefas previas a cada práctica. Asistencia con aproveitamento ao Laboratorio/Aula informática, e entregas de memorias e/ou cuestionarios a través da plataforma online. Ambas partes terán unha valoración máxima de 3 puntos da nota final. Para poder ser avaliado neste apartado, o alumno deberá asistir a un número mínimo de 7 prácticas. Resultados de aprendizaxe: Avalíanse todos.	30	B3 B4	C13	D2 D6 D9 D10 D16

Resolución de problemas e/ou exercicios	Evaluaranse nun exame final escrito na data establecida no calendario de exames. Nesta proba avaliaranse conxuntamente todos os contidos desenvolvidos na materia. Resultados de aprendizaxe: Avalíanse todos.	40	B3 B4	C13	D2 D6 D9 D10 D16
---	--	----	----------	-----	------------------------------

Other comments on the Evaluation

Avaliación continua

1ª edición

A asignatura aprobarase se se obtén unha cualificación* igual ou superior a 5 como nota final, do seguinte xeito:

- A asistencia con aproveitamento ao Laboratorio/Aula informática, a cualificación das tarefas previas, as memorias e/ou cuestionarios en cada práctica e os traballos desenvolvidos terán unha valoración máxima de 3 puntos da nota final.
- As probas de avaliación continua terán unha valoración máxima total de 3 puntos da nota final.
- O exame final terá unha valoración máxima de 4 puntos da nota final. Establécese un mínimo de 1.5 sobre 4 no exame final para superar a materia. De non obter o mínimo no exame final, a cualificación final será a nota desta proba ponderada sobre 10.

2ª edición

Na segunda edición, poderanse recuperar as probas de resolución de problemas, de tal xeito que a proba final terá unha valoración máxima de 7 puntos cunha puntuación mínima de 2.5 (sobre 7). A cualificación final das persoas que non consigan o mínimo nesta parte será a cualificación da proba de resolución de problemas de segunda edición ponderada sobre 10 puntos.

Avaliación global

Aquelas persoas que opten ao sistema de avaliación global seguindo os mecanismos establecidos pola Escola de Enxeñaría Industrial serán avaliadas como segue:

- Avaliación da parte práctica: Esta proba consiste na resolución dunha serie de cuestións relacionadas cos contidos impartidos nas sesións prácticas da materia. Terá unha valoración máxima de 3 puntos.
- Proba de resolución de problemas e/ou exercicios: O exame final terá unha valoración máxima de 7 puntos da nota final. Establécese un mínimo de 2.5 sobre 7 nesta parte do sistema de avaliación. De non obter o mínimo na proba de exame final, a cualificación final será a nota desta proba ponderada sobre 10.

Compromiso ético

Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso, a cualificación global no presente curso académico será de suspenso (0.0).

Non se permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado na aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0.0).

*Empregarase un sistema de cualificación numérica de 0 a 10 puntos segundo a lexislación vixente (RD 1125/2003 do 5 de setembro, BOE do 18 de setembro).

Expected results from this subject		Training and Learning Results		
Purchase a global and realistic vision of the current scope of industrial automation systems.	B3	C12	D17 D20	
Know which are the constitutive elements of an industrial automation system, its sizing and as they work.	B3	C12	D2 D6 D20	
Knowledge applied on the programmable logic controllers, its programming and its application to industrial automation systems.	B3	C12	D2 D6 D9 D16 D17	
General knowledge on the continuous control of dynamic systems, of the main tools of simulation of continuous systems and of the main devices of process control with greater interest to industrial level.	B3	C12	D3 D6 D17 D20	
General concepts of the technicians of industrial controllers tuning.	B3	C12	D2 D9 D16	

Contents	
Topic	

1. Introducción to industrial automation and elements of automation.	1.1 Introducción to automation of tasks. 1.2 Types of control. 1.3 The programmable logic controller. 1.4 Diagrama of blocks. Elements of the PLC. 1.5 Cycle of operation of the PLC. Time of cycle. 1.6 Ways of operation.
2. Languages and programming technics of programmable logic controllers.	2.1 Binary, octal, hexadecimal, BCD systems. Real numbers. 2.2 Access and adressing to periphery. 2.3 Instructions, variables and operations. 2.4 Forms of representation of a program. 2.5 Types of modules of program. 2.6 linear Programming and estructurada. 2.7 Binary variables. Inputs, outputs and memory. 2.8 Binary combinations. 2.9 Operations of allocation. 2.10 Timers and counters. 2.11 Operations aritméticas.
3. Tools for sequential systems modelling.	3.1 Basic principles. Modelling techniques. 3.2 Modelling with Petri Nets. 3.2.1 Definition of places and transitions. Rules of evolution. 3.2.2 Conditional election among several alternatives. 3.2.3 Simultaneous sequences. Concurrency. Sharing resources. 3.3 Implementation of Petri Nets.
4. Control systems introduction.	4.1 Systems of regulation in open and closed loop. 4.2 Typical control loop. Nomenclature and definitions.
5. Representation, modelling and simulation of continuous dynamic systems.	5.1 Physical systems and mathematical models. 5.1.1 Mechanical systems. 5.1.2 Electrical systems. 5.2 Modelling in transfer function. Laplace transform: Properties. 5.3 Block diagrams.
6. Analysis of continous dynamical systems.	6.1 Stability. 6.2 Transient response. 6.2.1 First order systems. Differential equation and transfer function. Examples. 6.2.2 Second order systems. Differential equation and transfer function. Examples. 6.2.3 Effect of the addition of poles and zeros. 6.3 System reduction. 6.4 Steady-state response. 6.4.1 Steady-state errors. 6.4.2 Input signals and system type. 6.4.3 Error constants.
7. PID controller. Parameters tunning of industrial controllers.	7.1 Basic control actions. Proportional, integral and derivative effects. 7.2 PID controller. 7.3 Empirical methods for industrial controller tuning. 7.3.1 Open loop tuning: Ziegler-Nichols and others. 7.3.2 Closed loop tuning: Ziegler-Nichols and others.
P1. Introduction to PLC programming software.	Introduction to the software that allows to create and modify PLC programs.
P2. Basic elements of PLC programming	Modelling and implementation of simple automation systems.
P3. Implementation of simple Petri Net.	Petri Net modelling, implementation and debugging of a simple automation system.
P4. Implementation of medium complexity Petri Nets.	Petri Net modelling, implementation and debugging of a Petri Net involving counters and timers.
P5. Modeling and implementation of an advanced Petri net.	Modeling and implementation of a Petri Net with concurrency.
P6. Introduction to MATLAB.	Introduction to the relevant MATLAB system analysis instructions.
P7. Systems and transfer functions with MATLAB.	Systems analysis using their transfer functions.
P8. Modeling and time response in SIMULINK.	Modeling and simulation of control systems with SIMULINK.
P9. PID controller design.	Determination of PID controller parameters using the methods studied in class and subsequent verification of their performance.

Assessment

	Description	Qualification	Training and Learning Results			
Laboratory practical	It will grade each lab session between 0 and 10 points, including the pre-session work. The professional behavior during the lab session will be taken into account for the grade. Lab sessions are weighted differently in the final grade.	20	B3	C12	D3	D6
					D9	D16
					D17	D20
Essay questions exam	Written exams. It may comprise theory questions and problems. Graded between 0 and 10.	80	B3	C12	D2	D3
	More than one exams may be carried out on the dates and times set at the beginning of the course.				D16	
None of the tests has a weight above 40% of the final grade.						

Other comments on the Evaluation

- The student's performance in the lab will be subject to **Continuous Assessment** throughout the lab sessions scheduled for the semester; **attendance at these sessions is mandatory**. In the event of not passing the Continuous Assessment, students will be required to take a **practical exam**. This exam is conditional upon passing the written exam and will be held during the **second examination period** (second call) on a date following the written test. It will cover all content from the regular lab sessions that was not successfully passed.
- For students who officially **opt out of Continuous Assessment**, the evaluation of their lab work will consist of a

practical exam. This exam, which is conditional upon passing the written exam, will be available in both the first and second examination periods. It will take place on a date after the written test and will cover the same content as the regular lab sessions.

- **Prerequisites may be established** for each lab session. Failure to meet these requirements may result in a **limitation of the maximum achievable grade** for that practical work.
- To pass the subject, students must pass both the **written and practical assessments**. If a student fails one or both of these assessments, a **scaling factor may be applied** to the partial grades, ensuring that the final overall grade does not exceed **4.5 out of 10**.
- Within any given exam, a **minimum score may be required** for a specific set of **theory questions and/or problems** in order to pass the exam as a whole.
- During the second examination period of the same academic year, students must be re-assessed on the components (written and/or practical) that they did not pass in the first period. **The same assessment criteria will apply**.
- In accordance with the Regulations for Continuous Assessment, students who participate in any assessable activity listed in the **Course Guide (Syllabus)** will be officially recorded as **"Presented"** for assessment (precluding a "Did Not Attend" status).
- **Ethical Commitment:** Students are expected to adhere to **appropriate ethical standards of conduct**. In the event that unethical behavior is detected (e.g., **cheating, plagiarism, use of unauthorized electronic devices**), the student will be deemed to have failed to meet the necessary requirements to pass the course. Consequently, their final grade for the current academic year will be a **fail (0.0)**.
- **Weighting of Assessments** Several continuous assessment tasks will be scheduled to ensure that **no single task accounts for more than 40%** of the final grade. All assessments will take place on the dates and times officially approved by the **School/Faculty**.

Avaliación		Qualification	Training and Learning Results		
	Description				
Exame de preguntas obxectivas	2 Teórico-Prácticas de igual peso: Probas de avaliación continua que se realizarán ao longo do curso, nas clases de teoría e/o nas datas habilitadas polo Centro, distribuídas de forma uniforme e programadas para que non interfiran no resto das materias. Cada unha destas probas (puntuación sobre 10) constarán dunha parte tipo test (5 puntos) e doutra de exercicios (5 puntos). Para poder superar ou compensar dita proba hai que alcanzar en cada unha das partes polo menos 1,75 puntos	60	B8 B9	C15 C17	D1 D2 D7 D8 D9 D18
Práctica de laboratorio	1 Exercicios de prácticas: Proba de avaliación continua que terá lugar unha vez realizadas todas as sesións prácticas, de acordo con a planificación académica, na data recollida no calendario oficial do Centro para os exames da primeira oportunidade.	40	B8 B9	C15 C17	D1 D2 D7 D8 D9 D18

Other comments on the Evaluation

COMPROMISO ÉTICO

Espérase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no presente curso académico será de suspenso (0,0). Non se permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado no aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0,0)

AVALIACIÓN CONTINUA (cualificación sobre 10)

Todo o alumnado, salvo aquelas persoas que se acollan á Avaliación Global nos prazos establecidos polo Centro, será avaliado mediante a modalidade de Avaliación Continua.

Para superar a materia por Avaliación Continua deben cumprirse os seguintes puntos:

1. É imprescindible realizar con aproveitamento as prácticas da materia asistindo ás mesmas e entregando a resolución dos exercicios propostos e desenvolvidos nas sesións de prácticas. Só se permitirán, por causas debidamente xustificadas, 2 faltas ao longo de todo o curso, debéndose entregar igualmente a resolución dos exercicios ou do traballo equivalente para a súa recuperación. Unha vez superado o tope das 2 faltas non se poderá aprobar a materia por avaliación continua.

Importante: O comportamento inadecuado nas clases penalizarase coma se fose unha falta. De igual maneira, se o traballo da práctica entrégase fóra dos prazos establecidos, esta contabilizarase como unha práctica non realizada.

2. Débense superar todas as probas (2 teórico-prácticas e 1 de exercicios) ou ben ter unha media de aprobado e que ningunha das notas das diferentes partes sexa inferior ao 4 (nota mínima para compensar).

O alumnado que supere a materia por Avaliación Continua poderá presentarse, no caso de que queira optar a maior nota nalgunha das partes teórico-prácticas, á proba da primeira oportunidade da convocatoria oficial da materia, establecida o calendario oficial de exames do Centro. É importante saber que para a nota final teranse en conta as notas de todas as probas realizadas.

O alumnado que non supere a materia por Avaliación Continua por non alcanzar o aprobado ou a nota mínima para compensar nunha das dúas partes teórico-prácticas da materia, poderá recuperar esta parte na proba final correspondente á primeira oportunidade da materia e fixada no calendario oficial de exames do Centro.

Finalmente, unha vez realizado o exame da primeira oportunidade, de non superarse a materia por Avaliación Continua, a proba correspondente da segunda oportunidade da convocatoria oficial (Julio) comprenderá todas as partes da materia.

CONVOCATORIAS OFICIAIS (cualificación sobre 10)

O alumnado que renunciase á Avaliación Continua será avaliado mediante a modalidade de Avaliación Global, podendo optar á máxima cualificación.

Dentro da Avaliación Global contémplanse dúas situacións:

a) Aquel alumnado que desenvolvese con aproveitamento as prácticas (é dicir, que asista e entregue a resolución das mesmas nos prazos establecidos), realizará unha proba cun parte teórico-práctica (60% da nota) e outra de exercicios de prácticas ☐reducida☐ (40% da nota).

b) Aquel alumnado que non cumpra a condición das prácticas, realizará unha proba cunha parte teórico-práctica (60% da nota) e outra de exercicios de prácticas ☐ampliada☐ (40% da nota).

CUALIFICACIÓN FINAL

A nota final do alumno calcularase a partir das notas das distintas probas tendo en conta a ponderación destas: partes teórico-prácticas 60 % e parte de exercicios de prácticas 40%. En calquera caso, para superar a materia é condición necesaria superar todas as partes ou ben ter unha media de aprobado e que ningunha das notas sexa inferior ao 4 (nota mínima para poder compensar).

Nos casos nos que a nota media das diferentes partes sexa igual ou superior ao valor do aprobado, pero nalgunha das partes non se alcanzou o valor mínimo de 4, a cualificación final será de suspenso. A modo de exemplo, un alumno que obtivese as seguintes cualificacións: 5, 9 e 1 estaría suspenso, aínda cando a nota media dá un valor igual o maior que 5, ao ter unha das partes por baixo da nota de mínima esixida (4). Nestes casos, a nota que se reflectirá na acta será de suspenso (4).

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	These sessions will be held in the rooms and dates fixed by the direction of the school. They will consist in an oral explanation by the professor of the most important parts of the course, all related with the materials that the student had to work previously. This is intended to favor the active participation of the students, that will have occasion to rise doubts and questions during the sessions. Active participation is desired during all the sessions.
Problem solving	During these sessions, in the classroom, interleaved with the lectures, the professor will proceed to solve examples and/or exercises that properly illustrate the problems to solve. As long as the number of participants in the classroom allows, active participation will be promoted.
Previous studies	Previous preparation of the theoretical sessions: Prior to the start of the theoretical sessions, the students will have available a series of materials that have to prepare, as the sessions will rely on them. Previous preparation of the laboratory sessions: It is mandatory that the students make all the assigned previous tasks prior to access the laboratory. These task are intended to greatly improve the laboratory knowledge acquisition. The achieved report will be taken into account when the laboratory session is to be evaluated.

Autonomous problem solving	Self study and review of the theoretical sessions for knowledge consolidation: The student must study, in a systematic time schedule, after each lecture session, in order to dissipate any doubts. Any doubts or unsolved questions will have to be expose to the professor as soon as possible in order to enhance the feedback of the learning process.
Laboratory practical	Laboratory sessions will be held in the time schedule established by the school's head teacher. Students will work in groups of two students each. The sessions will be supervised by a professor, who will control the assistance and will also evaluate the harnessing of it. During the laboratory sessionsthe students will make activities of the following kinds: - Assembling electronics circuits - Use of electronic instrumentation - Measure of physical variables on circuits - Do calculations related to the circuit and/or the measurements - Collect data and represent it (diagrams, charts, tables) At the end of each laboratory session each group will deliver the corresponding score sheets.

Personalized assistance

Methodologies	Description
Laboratory practical	Tutoring Sessions: During the established schedule of each professor, students will be able to speak freely about course issues with the professor. Also the will receive orientation and academic support, if needed. Email: The students also will be able to request orientation and support by means of email to the professors of the course. This way of attention is advisable for indications and short doubts of punctual type.

Assessment

	Description	Qualification	Training and Learning Results		
Laboratory practical	Assessment of the laboratory sessions: The laboratory sessions will be evaluated in a continuous way, on each session. The applied criteria are: - A minimum attendance of 80% - Punctuality - Previous task preparation of the sessions - Make the most of the session The practical sessions will be held in groups of two students. The documents of the practices will be available prior to the sessions. The students will fill report, that will be delivered when the session ends. This report serves to justify both the attendance and how they have done the work asked for.	20	C11	D9 D10 D17	
Objective questions exam	Several individual tests will be carried out referring to a set of subjects of the subject. None of the tests carried out will have a weight greater than 40% in the total grade for the subject.	80	B3	C11	D2 D9 D10
Essay questions exam	It will consist of an objective individual test where the entire content of the subject will be evaluated. It will be held at the end of the semester at the times established by the center's management. This test is reserved for those students who do not reach a minimum score in the "Objective question exams" or those who have been recognized by the center as waiving continuous assessment.	80	B3	C11	D2 D9 D10

Other comments on the Evaluation

EVALUATION AND GRADING OF THE SUBJECT

The evaluation of the subject is continuousand consists of the following elements:

Self assessment :

Associated with each topic there are severalself-assessment questionnaires. There are short questionnaires after each section or pill into which each topic is divided, and a larger and more comprehensive questionnaire at the end of each topic. These self-assessment questionnaires have no influence on the grade. The purpose of these questionnaires is to help students assess their level of knowledge about each of the topics. The answers of these questionnaires by the students provide valuable information to the teaching staff about those aspects of the subject in which the students find greater difficulties.

Laboratory sessions:

The evaluation of the laboratory sessions accounts for 20% of the course grade. The laboratory sessions are evaluated one by one, obtaining a grade for each session. The evaluation criteria are: attendance, punctuality, prior preparation and performance. The laboratory session grade (NP) will be obtained by averaging the grades of all the sessions, with the following requisites:

- A minimum attendance of 80% must be recorded, otherwise the laboratory grade will be zero.
- A minimum of 3.3 points in the grade of theory must be reached (NT), otherwise the laboratory grade will be zero.

Theory:

The evaluation of the theory part (NT) accounts for 80% of the course grade. For its evaluation, the subject will be divided into two parts (P1 and P2), each covering approximately 50% of the contents of the subject and three evaluation sessions will be held, distribute as follows:

First session: It will take place approximately in the middle of the semester. This session will exclusively evaluate P1.

Second session: It will be held on the date and time established by the center for the final exam in May. In this session each student will be able to take advantage of one of the following options:

- Incomplete option: Only P2 is examined. Students who have obtained a grade equal to or greater than 3.3 points in P1 may choose this option. If the grade obtained in P2 is equal to or greater than 3.3 points, the resulting grade will be $NT = (P1 + P2) / 2$. If the grade obtained in P2 is less than 3.3 points, NT will be calculated in the same way, but its maximum value will be limited to 3.6 points.
- Complete option: The student renounces the grade of P1 obtained in the first session and takes a complete exam (EC) of the entire theory. The grade will be $NT = EC$.

Third session: It will be done on the date and time established by the center for the final exam in July. In this session, the students will take a complete exam (EC). The grade will be $NT = EC$.

The final grade (NA) will be calculated as follows: $NA = 0.2x (NL) + 0.8x (NT)$

Other considerations

For the present academic year, the laboratory qualifications of the two previous years will be kept and considered valid.

Those students to whom the management of the center grants the waiver of continuous evaluation will be evaluated, on the same day and time of the final exam established by the center (second and / or third session). The evaluation will consist of two tests: An exam in full modality (EC) with a weight of 80% on the final grade. A specific laboratory test, weighing 20% on the final grade. In principle, this specific test will be carried out after the written test in the electronic laboratories of the corresponding center's site.

In the extraordinary call End of Degree students will take a theory exam that will have a weight of 80% on the final grade. The remaining 20% will be obtained from the qualification of a specific laboratory test.

To pass the course, in any of the previous cases, it is necessary to achieve a final grade equal or higher than 5 points.

Recommendations:

It is very important that the students keep updated the profile in the FAITIC platform. All communications related with this course will be made through this platform. All individual communications will be made through the email listed in this platform.

The students can solve doubts related with the laboratory previous activities in the personal attention hours (tutoring time), or by any other contact procedure available in FAITIC.

The students must meet the deadlines for all the activities.

All the achieved results must be justified, in any of the exams or activities. None of the achieved results will be taken for good if no explanation is given about the method used to find them. The selected method for solving a problem is considered when grading the solution.

When writing the solutions and answers in reports and tests, avoid spelling mistakes and unreadable symbols.

Exams lacking some of the sheets will not be graded.

Use of cell phones, notes or books is forbidden during exams.

Competencies Acquisition and Its Influence on Assessments

In this subject all the different activities are designed to assess the students in the competencies, and the acquisition of the competencies defines the final mark. Here follows a description of how the competencies and activities are related.

CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.

The acquisition of this competency is provided by the contents of the topics of the subject. All activities of self-assessment, the laboratory sessions and the different test are elaborated to evaluate the knowledge of the technical subjects.

CE11 Knowledge of the fundamentals of electronics.

This competency is warrant to be acquired along all the lectures, the laboratory sessions, the self-assessment activities and the tests.

CT2 Problems resolution.

The students will exercise this competency by means of the following activities: self-assessment activities, bulletin of problems and previous theoretical solution of experiments to be made at the laboratory. This competency is also acquired along all the test (for each block and the individual one), as they mainly are composed by problems to be solved.

CT9 Apply Knowledge

This competency is mainly acquired during the laboratory sessions, where the theoretical knowledge from problems, designs and simulations should match the assembly of circuits and real measures. Laboratory sessions are evaluated one by one, scoring an average of marks, if there is a minimum number of attended sessions with a minimum score.

CT10 Self learning and work

The self learning process is fundamental to achieve the score to approve the subject. In order to motivate students in the task of acquiring the theoretical knowledge, self-assessment test (on line), lectures based on the remote learning platform (faitic) and bulletins of problems have been created. The self-assessment test also provide feedback to the professors about the main difficulties found by students. On the laboratory sessions, the previous preparation is an explicit method of evaluation. In order to make this preparation, each of the laboratory sessions has its specific documentation and tutorials.

CT17 Working as a team

The students exercise this competency at the laboratory sessions, by making teams of two people. Cooperation in most of the sessions is needed to perform the assembly of circuits, make the measurements and take notes. The professor in charge of the laboratory session verifies the previous work and how each session is going along, watching that both members cooperate to achieve the best possible result. Scores for students can be different if the professor detects that one of the team member is not cooperating.

General description	The educational aims of Foundations of Systems and Technologies of Manufacture, in his fundamental and descriptive appearances, centre in the study and the application of scientific knowledges and technicians related with the processes of manufacture of components and conjoint whose functional purpose is mechanical, as well as the evaluation of his dimensional precision and the one of the products to obtain, with a determinate quality. All this including from the phases of preparation until the ones of utilisation of the instruments, the tools, toolings, teams, machines tool and necessary systems for his realisation, in accordance with the norms and specifications established, and applying criteria of optimisation.			
To reach the aims mentioned will give the following thematic educational:				
- Foundations of dimensional metrology. Measure of length, angles, forms and elements of machines. - Study, analysis and evaluation of the dimensional tolerances. Chain of tolerances. Optimisation of the tolerances. Systems of adjust and tolerances. - Processes of conformed of materials by means of start of material, operations, scheme, teams and tooling - Processes of conformed by means of plastic deformation, operations, scheme, teams and tooling - Processes of conformed by *moldeo, operations, scheme, teams and tooling - Processes of conformed no conventional, operations, scheme, teams and tooling. - Conformed of polymers, and other no metallic materials, operations, scheme, teams and tooling - Processes of union and assembling, operations, scheme, teams and tooling - Foundations of the programming of scheme with *CNC, used in the mechanical manufacture.

Contents

Topic	
DIDACTIC UNIT 1. INTRODUCTION To THE TECHNOLOGIES And SYSTEMS OF MANUFACTURE.	Lesson 1. INTRODUCTION TO MANUFACTURING ENGINEERING. The production cycle. Classification of industries. Manufacturing technologies.
DIDACTIC UNIT 2. METROTECHNICS.	Lesson 2. PRINCIPLES OF DIMENSIONAL METROLOGY. Introduction. Definitions and concepts. The international system of units. Physical quantities covered by Dimensional Metrology. Elements involved in the measurement. Classifications of measurement methods. Patterns. The traceability chain. Calibration. Uncertainty. Calibration chain and transmission of uncertainty. Relationship between tolerance and uncertainty. Expression of measurement uncertainty in calibration. Lesson 3. MEASUREMENT INSTRUMENTS AND METHODS. Introduction. Patterns. Verification instruments. Interferometric patterns. Principles of interferometry. Direct measurement instruments. Methods and instruments of indirect measurement. Lesson 4. MEASUREMENT BY COORDINATES. IMAGE MEASUREMENT. SURFACE QUALITY. Coordinate measuring machines. Concept. Principles of MMC. Classification of machines. Main components of MMC. Process to follow for the development of a measure. Image measurement systems. Surface Quality. Roughness measurement methods. Roughness parameters.

DIDACTIC UNIT 3.
FORMING PROCESSES BY MATERIAL REMOVAL

Lesson 5. INTRODUCTION TO SHAPING BY MATERIAL REMOVAL.

Introduction. Movements in the material removal process. Factors to take into account when choosing the tool. Tool geometry. Tool materials. Chip formation mechanism. Types of chips. Power and cutting forces. Tool wear. Tool wear criteria. Determination of tool life. Cutting fluids.

Lesson 6. TURNING: OPERATIONS, MACHINES AND TOOLS.

Introduction. Main operations around. The machine tool: the lathe. Main parts of the lathe. Assembly or holding of parts. Typical lathe tools. Special lathes.

Lesson 7. MILLING: OPERATIONS, MACHINES AND TOOLS.

Introduction. Description and classification of milling operations. Parts and main types of milling machines. Types of strawberries. Tool assembly. Piece clamping. Different configurations of milling machines. Special milling machines.

Lesson 8. MACHINING OF HOLES AND WITH MAIN RECTILINEAR MOVEMENT: OPERATIONS, MACHINES AND TOOLS.

Introduction to hole machining operations. Drilling machines. Boring machines. General characteristics of machining processes with main rectilinear movement. Filer. Mortiser. Planer. Broaching machine. Saws.

Lesson 9. SHAPING WITH ABRASIVES: OPERATIONS, MACHINES AND TOOLS.

Introduction to hole machining operations. Abrasive wheels. Grinding operation. Types of grinding machines. Honed. Lapped. Polished. Burnish. Super finish

Lesson 10. NON-CONVENTIONAL MACHINING PROCESSES.

Introduction. Machining by electro-erosion or electro-discharge. Electrochemical machining. Laser machining. Water jet machining. Plasma arc cutting. Ultrasonic machining. Chemical milling.

DIDACTIC UNIT 4.
AUTOMATION AND MANAGEMENT OF
MANUFACTURING PROCESSES.

Lesson 11. NUMERICAL CONTROL OF MACHINE TOOLS.

Introduction. Advantages of the application of NC in machine tools. Information needed to create a NC program. Manual programming of MHCN. Types of CN language. Structure of a program in ISO code. Characters used. Preparatory functions (G__). Auxiliary functions (M__). Interpretation of the main functions. Examples. Automatic programming in numerical control.

DIDACTIC UNIT 5.
PROCESSES FOR SHAPING MATERIALS IN LIQUID
AND GRANULAR STATES.

Lesson 12. GENERAL ASPECTS OF METAL CASTING FORMING.

Introduction. Stages in casting forming. Nomenclature of the main parts of the mold. Materials used in casting. Fluid flow in the feeding system. Solidification of metals. Contraction of metals. The suck. Calculation procedure for the casting distribution system. Considerations on design and defects in cast parts.

Lesson 13. FOUNDRY MANUFACTURING PROCESSES.

Classification of foundry processes. Sand molding. Shell molding. Plaster molding. Ceramic molding. CO2 molding. Lost wax molding. Full mold casting. Merccast molding. Molding in permanent mold. Injected casting. Centrifugal casting. Furnaces used in foundry.

Lesson 14. POWDER METALLURGY (POWDER METALLURGY).

Introduction. Manufacturing of metal powders. Characteristics and properties of metal powders. Dosing and mixing of metal powders. Compaction. Sintered. Sintering furnaces. Disruptive discharge sintering. Presintered. Subsequent operations. Design considerations. Products obtainable by sintering.

Lesson 15. SHAPING OF PLASTICS.

Introduction. Classification of polymeric materials. Physical properties of polymers. Classification of processes. Extrusion molding. Injection molding. Compression molding. Transfer molding. Rotational molding. Thermoforming.

DIDACTIC UNIT 6.
UNION SHAPING PROCESSES.

Lesson 16. WELDING PROCESSES.

Introduction to welding processes. Electric arc welding. Resistance welding. Welding with oxygen and fuel gas. Welding with the melting temperature of the filler metal lower than that of the metals to be joined.

Lesson 17. JOINING AND ASSEMBLY PROCESSES WITHOUT WELDING.

Bonding processes using adhesives. Adhesion resistance. Conditions for gluing. Joint design Types of adhesives according to origin and composition. Mechanical joining processes. Removable and permanent mechanical joints.

DIDACTIC UNIT 7.
FORMING PROCESSES BY PLASTIC DEFORMATION
OF METALS.

Lesson 18. GENERAL ASPECTS OF FORMING BY PLASTIC DEFORMATION.

Introduction. Stress-strain curves. Expressions of deformation. Volume constancy. Approximate models of the real stress-natural deformation curve. Plane strain state. Primary and secondary processes. Hot and cold work processes. Conditions and process control.

Lesson 19. LAMINATION AND FORGING PROCESSES.

Lamination: basics; lamination temperature; hot rolling equipment; characteristics, quality and tolerances of hot rolled products; cold rolling. Forging: free; in printing matrix; in press; by stressing; cold heading; by lamination; in cold.

Lesson 20. EXTRUSION, DRAWING AND RELATED.

Extrusion. Stretching of bars and tubes. Wire drawing. Section reduction. Embossing. Embossed around. Pieces made by embossing: design considerations. Stretch forming. Forming with rubber pads and pressurized liquid. High power shaping.

Lesson 21. SHEET METAL SHAPING.

Curving or bending of sheets. Curved with rollers. Formed with rollers. Straightened. Snapped. Sheet metal cutting operations.

PRACTICE PROGRAM

Practice 1.- Use of conventional metrology devices.

Measurement of pieces using a normal caliper, depth gauge, exterior and interior micrometer. Use of dial gauge. Checking flat surfaces. Use of go/no go gauges, rules, squares and pattern cleats. Measuring and checking threads. Making metric measurements and in English units.

Practice 2.-Indirect measurements.

Checking a cone using rollers and a caliper, measuring a dovetail using rollers, measuring the angles of a double dovetail and measuring using a sine ruler. Direct measurements with goniometer. Checking threads.

Practice 3.- Coordinate measurement machine.

Coordinate system selection. Checking part measurements, using a coordinate measuring machine. Verification of tolerances, shape and position.

Practice 4.- Manufacturing with conventional machine tools.

Manufacture of a part using the conventional lathe, milling machine and drill, defining the basic operations and carrying them out on the machine. Manufacturing process planning. Preparation of process sheets.

Practice 5, 6 and 7.- Introduction to numerical control applied to the lathe and milling machine.

Realization of a CNC program using a simulator, with the main and simplest commands. Programming and machining of parts on both the lathe and the milling machine in the workshop classroom.

Practice 8.- Welding.

Knowledge of different electric welding equipment. Welding of different materials using coated electrode, TIG and MIG techniques.

Practice 9.- Scoring practical test on numerical control.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	32.5	0	32.5
Laboratory practical	18	0	18
Objective questions exam	1	0	1
Objective questions exam	1	0	1
Laboratory practice	2	0	2
Case studies	0	6	6

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	The theoretical classes will realise combining the explanations of blackboard with the employment of videos and presentations of computer. The purpose of these is to complement the content of aim them, interpreting the concepts in these exposed by means of the sample of examples and the realisation of exercises.
Laboratory practical	The practical classes of laboratory will realise in 9 sessions of 2 hours, except the students of the course bridge that will realise the practices in the 6 sessions that contemplates his particular schedule, in groups of 20 maximum students, and employing the available resources of instruments and machines, combining with the simulations by computer.

Personalized assistance

Methodologies	Description
Lecturing	Classes of theory in classroom
Laboratory practical	Practices of laboratory by groups

Assessment				
	Description	Qualification	Training and Learning Results	
Objective questions exam	EX1 (tests continuous evaluation - 36% final note-) Tests written and face-to-face to make to half of course on the contents from the start until this moment. Compulsory character. It will be composed by 12 ask type test on the practical theoretical/contents of the matter. The note of this test will obtain adding 0,3 points by each properly answered question and will subtract 0,1 points if the question is resolved of wrong form. The questions in white do not mark, but only can leave 4 questions in white.	36	B3 C15	D8 D9 D10
Objective questions exam	EX2 (tests continuous evaluation - 39% final note-) Tests written and face-to-face to make to final of course on the contents from half of course to the end. Compulsory character. It will be composed by 13 ask type test on the practical theoretical/contents of the matter. The note of this test will obtain adding 0,3 points by each properly answered question and will subtract 0,1 points if the question is resolved of wrong form. The questions in white do not mark, but only can leave 4 questions in white.	39	B3	D9 D10 D17
Laboratory practice	*CNC (Tests continuous evaluation - 15% final note-): A proof to make in the schedule of consistent practical class in the realisation of a program of numerical control that mechanise the piece that present him .	15	C15	D2 D8 D9 D10 D17 D20
Case studies	*MEM (Tests continuous evaluation - 10% final note-): A proof written, work or memory to propose by the professor along the *cuatrimestre. This proof will value with a maximum of 1 point, 10% of the final note.	10	C15	D2 D8 D9 D10 D17 D20

Other comments on the Evaluation

APPROVED

Students qualified through continuous evaluation:

To pass this subject it is necessary to obtain at least 5 points by adding the score of the EX1, EX2, CNC and MEM type tests under the conditions set out above.

If more than 4 questions are left blank in the EX1 or EX2 tests, the score in that test will be 0.

In principle, all students must follow the continuous evaluation procedure, except for those who expressly resign within the time and manner and are granted the resignation by the school.

Qualified students with waiver granted to continuous evaluation:

To pass this subject it is necessary to obtain at least 5 points by adding the scores of the EXA and REC type tests, under the following conditions:

EXA (theoretical/practical exam waiver of continuous evaluation - 75% final grade)

Written and in-person test to be taken on the entirety.

It will be composed of 25 multiple choice questions on the theoretical/practical contents of the entire subject.

The grade for this test will be obtained by adding 0.3 points for each question answered correctly and 0.1 points will be subtracted if the question is answered incorrectly. Blank questions do not count, but only 8 questions can be left blank.

PRA (practical exam waiver of continuous evaluation - 25% final grade)

Written resolution of several practical problems, the value of which will be 25% of the final grade. It is necessary to obtain a minimum of 1 point in this test so that the grade can be added to that of the EXA test and to be able to obtain at least 5 points to pass the subject.

These tests will be carried out exclusively by students who have been granted a waiver from continuous evaluation, and will be carried out on the day set by the center for the 1st opportunity evaluation.

ATTENDANCE TO THEORETICAL AND PRACTICAL CLASSES

Attendance at theoretical and practical classes is not mandatory, but what is taught in them will always be the subject of the exam.

EXTRAORDINARY CALL (Minutes of 2nd edition / July)

Students qualified through continuous evaluation:

This second edition of the ordinary call will be qualified as follows:

- By taking the mandatory EXA type test.

EXA (theoretical/practical exam waiver of continuous evaluation - 75% final grade)

Written and in-person test to be taken on the entirety. It will be composed of 25 multiple choice questions on the theoretical/practical contents of the entire subject. The grade for this test will be obtained by adding 0.3 points for each question answered correctly and 0.1 points will be subtracted if the question is answered incorrectly. Blank questions do not count, but only 8 questions can be left blank.

- The grades of the CNC and MEM continuous evaluation tests are maintained in this 2nd opportunity, but you can, if you wish, improve this grade:

CNC: by carrying out a new machine tool programming test, which will be a test, at the end of the 2nd edition EXA test.

MEM: through a new written test, work or report, which will be similar, to be delivered on the date it is published, before the day of the call for this second edition.

To pass this subject it is necessary to obtain at least 5 points by adding the three previous tests and meeting the same minimums as in the 1st edition.

The grades of the continuous assessment tests will not be kept from one course to another.

Qualified students with waiver granted to continuous evaluation:

Students who do not take continuous evaluation, because the center has accepted their resignation, must always take the EXA type test and the PRA type test in all calls, in the terms specified for the first opportunity.

To pass this subject it is necessary to obtain at least 5 points adding the two previous tests.

EXTRAORDINARY FINAL CAREER CALL:

This test will be the same for all students and will consist of an EXA type test and a PRA type test, in the terms specified in the previous sections for students who have waived continuous evaluation.

To pass this subject it is necessary to obtain at least 5 points by adding the two previous tests, meeting the same minimums as in the ordinary calls.

ETHICAL COMMITMENT:

The student is expected to present appropriate ethical behavior, free of fraud. If unethical behavior is detected (copying, plagiarism, use of unauthorized electronic devices) it will be considered that the student does not meet the necessary requirements to pass the subject. In this case the overall grade in the current academic year will be a fail (0.0).

General description	Nesta guía docente preséntase información relativa á materia Mecánica de Fluídos de 2º curso do grao en Enxeñaría en Tecnoloxías Industriais, no que se continúa de forma coordinada un achegamento ás directrices marcadas polo Espazo Europeo de Educación Superior. Neste documento recóllense as competencias xenéricas que se pretende que os alumnos adquiran neste curso, o calendario de actividades docentes previsto e a guía docente de materia. A Mecánica de Fluídos describe os fenómenos físicos relevantes do movemento dos fluídos, describindo as ecuacións xerais dos devanditos movementos. Este coñecemento proporciona os principios básicos necesarios para analizar calquera sistema no que o fluído sexa o medio de traballo. Estes principios son de aplicación en: -Deseño de maquinaria hidráulica -Centrais térmicas e de fluídos de produción de enerxía convencionais e renovables. - Lubrificación - Sistemas de calefacción e ventilación, calor e frío. - Deseño de sistemas de tubaxes. - Medios de transporte. - Aerodinámica de estruturas e edificios.			

Resultados de Formación e Aprendizaxe

Code	
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
B5	CG5 Coñecementos para a realización de medicións, cálculos, valoracións, taxacións, peritaxes, estudos, informes, planes de labores e outros traballos análogos.
C8	CE8 Coñecementos dos principios básicos da mecánica de fluídos e a súa aplicación á resolución de problemas no campo da enxeñaría. Cálculo de tubaxes, canais e sistemas de fluídos.
D2	CT2 Resolución de problemas.
D9	CT9 Aplicar coñecementos.
D10	CT10 Aprendizaxe e traballo autónomos.

Resultados previstos na materia

Expected results from this subject	Training and Learning Results		
Entender os principios básicos do movemento de fluídos.	B4	C8	D9 D10
Capacidade para calcular tubaxes e canles.	B5	C8	D2 D9 D10
Capacidade para coñecer e dominar as ferramentas coas que se abordan os problemas de fluxos de fluídos.	B4 B5	C8	D2 D9 D10
Capacidade para manexar medidores de magnitudes fluídas.	B5	C8	D9 D10

Contidos

Topic

1.- Conceptos fundamentais dos fluídos	1.1.- Concepto de fluído. 1.2.- Hipótese de medio continuo. 1.3.- Viscosidade. 1.4.- Reoloxía básica: lei de Navier-Poisson e lei de Newton da viscosidade. 1.5.- Presión e carga: estática, dinámica e piezométrica. 1.6.- Forzas sobre fluídos: volumétricas e superficiais. 1.7.- Tensor de esforzos sobre unha partícula fluída. 1.8.- Outras propiedades de interese en mecánica de fluídos.
2.- Estudio xeral do movemento dos fluídos	2.1.- Enfoques clásicos: Euler vs. Lagrange. 2.2.- Concepto de campo de velocidade. 2.3.- Cinemática básica: aceleración e tensor de variación da velocidade. Liñas de traxectoria e corrente. 2.4.- Tensións e deformacións da partícula fluída: relación co tensor de variación da velocidade. 2.5.- Clasificación de fluxos de fluídos: - segundo condicións cinemáticas - segundo condicións xeométricas - segundo condicións mecánicas de contorno - segundo condicións do movemento interno 2.6.- Sistema vs. volume de control 2.7.- Integrais estendidas a volumes fluídos: Teorema do transporte de Reynolds. 2.8.- Relacións integrais para un volume de control: conservación da masa, conservación da cantidade de movemento e conservación da enerxía. 2.9.- Relacións diferenciais para unha partícula fluída: continuidade e segunda lei de Newton. Ecuacións de Navier-Stokes. Ecuación da enerxía. 2.10.- Casos particulares: ecuación de Euler, teorema de Bernoulli, fluxo incompresible, vorticidade e irrotacionalidade.
3.- Análise dimensional y similitude fluído-dinámica.	3.1.- Introducción á análise dimensional. 3.2.- Teorema Pi de Buckingham. 3.3.- Grupos adimensionais de importancia na Mecánica de Fluídos: significación física. 3.4.- Similitude: parcial e total. Efecto de escala.
4.- Movemento laminar	4.1.- Introducción. 4.2.- Ecuacións de Navier-Stokes simplificadas: movemento estacionario unidireccional de líquidos. 4.3.- Casos particulares: Fluxo de Couette e fluxo de Hagen-Poiseuille. 4.4.- Pérdida de carga en réxime laminar: factor de fricción.
5.- Movemento turbulento	5.1.- Introducción. 5.2.- Enfoque estatístico da turbulencia. 5.3.- Modelos RANS para a turbulencia. 5.4.- Outros modelos para a turbulencia de interese. 5.5.- Noción de capa límite. 5.6.- Tratamento práctico-experimental da perda de carga en réxime turbulento: - Diagrama de Nikuradse - Diagrama de Moody - Fórmulas empíricas para fluxo en tubaxes
6.- Movementsos de líquidos en tubaxes de sección variable	6.1.- Introducción 6.2.- Perdas de carga localizadas: - Perda á entrada dun tubo - Perda nun tubo á saída - Perdas en válvulas - Perda en cúbados e outros elementos adaptadores singulares. - Perdas en válvulas
7.- Sistemas de tubaxes	7.1.- Sistemas de tubaxes: serie e paralelo. 7.2.- Redes de tubaxes: ecuacións de no e ecuacións de malla. 7.3.- Acople sistema-bomba. 7.4.- Transitorios en tubaxes: - Tempo de baleirado dun recipiente - Establecemento do réxime permanente nunha tubaxe - Introducción ao golpe de ariete

8.- Fluxo permanente en canles	8.1.- Introducción. 8.2.- Perdas de enerxía. 8.3.- Ecuacións para fluxo permanente uniforme: Sección máis eficiente. 8.4.- Ecuacións para fluxo permanente non uniforme. 8.5.- Ecuación da enerxía en transicións. 8.6.- Salto hidráulico. 8.7.- Medición de fluxo e regulación: comportas.
9.- Experimentación con fluxos fluídos. Dispositivos de medida.	9.1.- Medición da presión: - Manómetro simple - Manómetro Bourdon. - Transductores 9.2.- Medición da velocidade: - Tubo de Pitot - Tubo de Pitot-Prandtl - Anemómetros de rotación - Anemómetros de fío quente - Anemómetros sónicos e láser 9.3.- Medida de caudal: - Medidores de presión diferencial - Outros fluxómetros de uso frecuente.
10.- Practicas de laboratorio	10.1.- Perda de carga e medida do caudal - Medida de caudal con venturi. - Medida de caudal con placa de orificio - Determinación do coeficiente de fricción. - Perdas de carga en codos. - Perdas de carga en válvulas. 10.2.- Chorro libre: - Experimentación con tubo Pitot. - Visualización do perfil de velocidades. - Turbulencia en fluxos non confinados - Aplicación da lei de conservación da cantidade de movemento. 10.3.- Túnel de vento - Visualización da distribución de presións ao redor de corpos en fluxo externo. - Resistencia de forma e resistencia de fricción - Cálculo dos coeficientes aerodinámicos adimensionais máis relevantes. 10.4.- Análise de transitorios en instalacións - Visualización do fenómeno do golpe de ariete - Análise do deseño dun tanque ou cheminea de equilibrio. 10.5.- Experimento de Osborne Reynolds - Visualización da transición de réxime laminar a turbulento.

Metodoloxía docente

	Description
Lección maxistral	Explícanse os fundamentos de cada tema para posterior resolución de problemas prácticos. Poderanse realizar actividades como: Sesión maxistral Lecturas Revisión bibliográfica Resumen Esquemas Solución de problemas Conferencias Presentación oral

Resolución de problemas de forma autónoma	Aplicaranse os conceptos desenvolvidos de cada tema á solución de exercicios. Inclúe actividades tales como: Lecturas Solución de problemas Estudo de casos prácticos
Resolución de problemas	Aplicácese os conceptos desenvolvidos en cada tema na resolución dos exercicios
Prácticas de laboratorio	Aplicaranse os conceptos desenvolvidos de cada tema á realización de prácticas de laboratorio. Fundamentalmente, realizaranse actividades de experimentación, aínda que tamén poderán realizarse: Casos prácticos Simulación Solución de problemas Aprendizaxe colaborativo

Atención personalizada

Methodologies	Description
Lección maxistral	Os profesores publicarán o seu horario de titorías a primeira semana de curso na plataforma de teledocencia. A existencia deste horario preasignado, non supón que non se poidan celebrar fora do mesmo, sempre de mutuo acordo entre alumno e profesor. As titorías poderán levarse a cabo de forma presencial ou non presencial, mediante medios telemáticos habituais (correo-e, foros da plataforma de teledocencia, etc.) ou mediante as ferramentas que a universidade poña á disposición de alumnos e profesores para tal fin (aulas e despachos virtuais, etc.).
Resolución de problemas de forma autónoma	Os profesores publicarán o seu horario de titorías a primeira semana de curso na plataforma de teledocencia. A existencia deste horario preasignado, non supón que non se poidan celebrar fora do mesmo, sempre de mutuo acordo entre alumno e profesor. As titorías poderán levarse a cabo de forma presencial ou non presencial, mediante medios telemáticos habituais (correo-e, foros da plataforma de teledocencia, etc.) ou mediante as ferramentas que a universidade poña á disposición de alumnos e profesores para tal fin (aulas e despachos virtuais, etc.).

Exame de preguntas de desenvolvemento	Probas escritas que poderán constar de: cuestións teóricas, cuestións prácticas resolución de exercicios/problemas, tema a desenvolver e/ou cuestionario tipo test. Ver outros comentarios para o método de avaliación.	25	B4	C8	D2	D9

Other comments on the Evaluation

A/O alumna/o poderá decidir libremente a metodoloxía de avaliación (Global ou Continua) dentro do prazo e procedemento estipulados a tal efecto pola escola ou o coordinador da materia, e en calquera caso de acordo coa normativa vixente.

O problema da elección polo alumnado dunha metodoloxía de avaliación ou outra, de acordo cos pesos máximos estipulados, maniféstase de forma máis dramática no caso de dous alumnos que realizan o exame/reválida final e, obtendo exactamente a mesma cualificación nel (por exemplo, un 6), un aproba por ter elixido a avaliación global e o outro suspende por ter elixido a avaliación continua e obter só un 4.2 sobre 10 na media das probas de avaliación continua.

Para mitigar esta contradición da normativa no caso de optar por facer unha proba final de reválida, nesta materia calcularanse para cada estudante en modalidade de avaliación continua, dúas notas e asignaráselle a máis alta das dúas.

Modalidade Avaliación Continua

No calculo da cualificación final, consideraranse catro bloques de avaliación que consistirán e terán os seguintes pesos:

- Primeira proba parcial de avaliación continua, peso: 25%. Proba consistente en cuestións teórico/prácticas incluíndo resolución de exercicios e problemas e/ou tema a desenvolver. Poderían incluír cuestionarios tipo test.
- Segunda proba parcial de avaliación continua, peso: 25%. Proba consistente en cuestións teórico/prácticas incluíndo resolución de exercicios e problemas e/ou tema a desenvolver. Poderían incluír cuestionarios tipo test.
- Proba final de avaliación continua (reválida), peso: 40%. Proba consistente en cuestións teórico/prácticas incluíndo resolución de exercicios e problemas e/ou tema a desenvolver. Poderían incluír cuestionarios tipo test.
- Prácticas, peso: 10%. Entrega dunha memoria/informe/cuestionario e/ou realización de proba oral de a lo menos unha práctica experimental/TIC a realizar ao longo do curso.

No espírito do parágrafo anterior, asignarase a nota final de curso a todo o alumnado mediante a seguinte fórmula:

$$\text{Nota-Actas} = \max \{0.6 \text{ NC} + 0.4 \text{ NF}, \text{NF} + (1/30) \text{ NC} (10 - \text{NF})\}$$

onde NC é a media ponderada das probas parciais e prácticas de avaliación continua (no rango de 0 a 10) e NF é a nota da reválida (tamén sobre 10).

Modalidade Avaliación Global

Farase un exame final na data oficial aprobada en xunta de escola, puntuación máxima: 100%

Outros

Na convocatoria de segunda oportunidade (extraordinaria de xullo) rexeran a mesma metodoloxía que en primeira oportunidade, realizándose unha nova proba de avaliación final para o alumnado que vaia por continua e un novo exame final para o itinerario seguindo a avaliación global. Na modalidade de avaliación continua, por tanto, gárdase a nota das probas parciais e de prácticas.

No caso de non presentarse a ningún exame final/reválida, a cualificación será a de *Non Presentado*

Calendario de exames

Verificar/consultar de forma actualizada na páxina web do centro:

Compromiso ético

Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados e outros) considérase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no actual curso académico será de suspenso (0.0).

Expected results from this subject

Expected results from this subject	Training and Learning Results		
To know the differences between rigid solid and elastic solid.	B3	C14	D1
To know the stress and deformation states in a deformable solid and the relationship between them.	B4		D2 D9
Apply the acquired knowledge to the determination of the maximum values of stress at a point of a deformable solid.			D10 D16
To know the basic principles governing the Mechanics of Materials.			D17
To know the relationships between the different stress resultants and the stresses.			
To apply the knowledge acquired to the determination of stress resultant diagrams.			
To apply the acquired knowledge about stresses applied to bar elements.			
To know the basics about deformations of bar elements.			
To apply the knowledge acquired to the dimensioning of bar elements.			

Contents

Topic

1. Introduction of concepts of mechanics needed for the study of mechanics of materials	1.1 Vectors. Scalar product and cross product of two vectors 1.2 Types of connections 1.3 Moment of a force 1.4 Static equilibrium 1.5 Elements subjected to 2 or more forces 1.6 Distributed forces and centroids of area 1.7 Reduction of a system of forces to one force-couple 1.8 Frames and machines. Trusses. 1.9 Moments and products of inertia
2. Basic principles of elasticity and mechanics of materials	2.0 Stress and strain. Linear elastic materials 2.1. Normal stress in an axially loaded prismatic bar. 2.2. Equilibrium of a deformable body. 2.3. Stress-Strain diagram of ductile materials. Hooke's Law. 2.4. Stress resultants. Diagrams.
3. Axial Loads	3.1. Normal forces. 3.2. Elastic deformation of an axially loaded member. 3.3. Statically governed problems. 3.4. Statically indeterminate problems. 3.5. Thermal stress and assembly misfits.
4. Buckling	4.1. Fundamentals of buckling
5. Bending and shear	5.1 Beams: definition and types. Loads on beams. 5.2 Internal shear forces and bending moments. 5.3 External load, shear force and bending moment relationships. 5.4 Shear and moment diagrams 5.5 Pure bending and non-uniform bending. Hypothesis and limitations. 5.6. Normal stresses in unsymmetric bending. 5.7 Symmetric bending. The flexure formula (Navier's Law). 5.8 Section modulus of a beam. Ideal beam cross-section. 5.9 Deflection of beams and shafts. Slope and deflection. 5.10 Hyperstatic bending.
6. Other forces	6.1. Fundamentals of shear 6.4. Fundamentals of torsion

Planning

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Lecture where theoretical principles are presented using digital media, videos and blackboard
Laboratory practical	Activities of application of the knowledge to concrete situations and of acquisition of basic skills and procedural skills related with the subject of study.
Problem solving	Resolution of problems related to real case studies

Personalized assistance

Methodologies	Description
Laboratory practical	The students can ask the lecturers for the clarification of those concepts presented in the lecturers and practicals, as well as to clarify / discuss any doubts that may appear after the end of the sessions. The tutoring sessions may be carried out by telematic means (Remote Campus, Fatic, etc.) under the modality of prior agreement.

Assessment

Description	Qualification Training and Learning Results
-------------	---

Laboratory practical	Attendance and active participation in all the practical classes of the semester will be valued, as well as the timely delivery of all the documentation requested in them (reports, internship reports, etc.). The face-to-face part corresponding to each practice takes place on a specific date, so it is not possible to make up for absences. Those practices in which the student presents an official certificate (doctor, court,...) due to unavoidable reasons will be excused. It will be scored with the indicated value, provided that at least 45% of the possible qualification is reached in the final exam.	10	B3 B4 C14 D1 D2 D9 D10 D16 D17
Essay questions exam	Written exam on the official data established by the School. Minimum mark to sum in the final mark is 45% (*) (*) This minimum will be reduced to 40% for students who have attended and actively participated in at least 80% of the activities during lectures	40	B3 B4 C14 D1 D2 D9 D10 D16 D17
Problem and/or exercise solving	Throughout the course, 4 problem/exercise bulletins will be established for students to solve independently. These reports must be handed in solved on dates established by the teaching staff of the subject at the beginning of the course. The delivery must be made only through the teleteaching platform.	10	B3 B4 C14 D1 D2 D9 D10 D16 D17
Objective questions exam	Written tests to assess the individual work done by the student throughout the course. 4 tests will be carried out throughout the course on the dates that will be communicated to the students as the course progresses. Each test will be valued at 10% of the overall grade for the subject, with the total of tests valued at 40% of the final grade. To pass the subject, it will be a necessary condition to achieve at least 40% of the mark of this test. Students who do not reach this minimum (40%) may only pass the course through the extraordinary exam (second opportunity under the global assessment modality). The indicated value will be scored, provided that at least 45% (*) of the possible grade is reached in the final exam. (*) This minimum will be reduced to 40% for students who have attended and actively participated in at least 80% of the activities during lectures. Students who opt for the global assessment modality (waiving continuous assessment) will take a final exam consisting of: i) developmental questions; ii) questions of a conceptual nature (presumably test-type). This final exam will be assessed with 100% of the final grade of the subject (60% problem-solving section; 40% questionnaire).	40	B3 B4 C14 D1 D2 D9 D10 D16 D17

Other comments on the Evaluation

Ethical Commitment: The student is expected to demonstrate appropriate ethical behavior. If unethical behavior is detected (copying, plagiarism, use of unauthorized electronic devices and others), they consider that the student does not meet the necessary requirements to pass the subject. In this case, the overall grade of this course will be suspended (0.0).

The use of any electronic device will not be allowed during the assessment tests unless expressly authorized. The fact of introducing an unauthorized electronic device into the exam room will be considered a reason for not passing the subject in this academic year and the overall grade (0.0) will be suspended.

In case of discrepancies between the different translations of this document, Galician version will be taking into account.

General description	Na práctica totalidade dos procesos industriais requírese a aplicación dos Principios da Termodinámica e da Transferencia de Calor. O coñecemento destes principios é básico en Enxeñaría Térmica. Por exemplo, para a realización dunha análise enerxética (con determinación do rendemento enerxético e *exergético) de sistemas de potencia para a xeración de electricidade (ciclo combinado con *turbina de vapor e de gas), un ciclo de potencia mecánica, un ciclo en bomba de calor, etc. O coñecemento de se un proceso termodinámico pode ocorrer ou non na realidade é imprescindible para o deseño de novos procesos, así como o coñecemento das máximas prestacións que se poden obter nos diferentes dispositivos que compoñen unha instalación enerxética, e cales son as causas que imposibilitan obter esas máximas prestacións. Ademais, o estudo das propiedades termodinámicas dos fluídos de traballo que circulan polos dispositivos, auga, aire, *refrigerantes, gases e mestura de gases, é indispensable para analizar o comportamento dos sistemas térmicos. Así mesmo, o estudo do procedemento a seguir para a análise enerxética de instalacións enerxéticas de sistemas de refrixeración, acondicionamento de aire e en procesos de combustión é de gran interese. Doutra banda, é interesante para o alumno coñecer os mecanismos polos cales se produce a transferencia da enerxía, principalmente debido a unha diferenza de temperaturas, centrándose en determinar a maneira e a velocidade á que se produce ese intercambio de enerxía. Neste sentido preséntanse o tres modos de transferencia de calor e os modelos matemáticos que permiten calcular as velocidades de transferencia de calor. Así se pretende que os alumnos sexan capaces de expor e resolver problemas *ingenieriles de transferencia de calor mediante o uso de ecuacións *algebraicas. Tamén se pretende que os alumnos coñezan outros métodos matematicamente máis complexos de resolución de problemas de transferencia de calor e saiban onde atopalos e como usalos en caso de necesitalos.			

Resultados de Formación e Aprendizaxe	
Code	
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.

Planificación

	Class hours	Hours outside the classroom	Total hours
Lección maxistral	32.5	65	97.5
Prácticas de laboratorio	6	0	6
Resolución de problemas de forma autónoma	0	18.5	18.5
Resolución de problemas	12	12	24
Resolución de problemas e/ou exercicios	0	3	3
Exame de preguntas obxectivas	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

	Description
Lección maxistral	Exposición por parte do profesor dos contidos da materia obxecto de estudo, onde se procurará a máxima participación do alumno, a través da súa implicación directa na formulación de cuestións e/ou problemas,
Prácticas de laboratorio	Experimentación de procesos reais en laboratorio e que complementan os contidos que se imparten na materia
Resolución de problemas de forma autónoma	Resolución de problemas e/ou exercicios relacionados coa materia que o alumno levará a cabo mediante a consulta da bibliografía

Resolución de problemas	Resolución de problemas e/ou exercicios relacionados coa materia que o alumno realizará en aula e/ou laboratorio. Resolveranse problemas de carácter "tipo" e/ou exemplos prácticos. Salientarase o traballo en expor métodos de resolución e non nos resultados.
-------------------------	---

Atención personalizada

Methodologies	Description
Lección maxistral	Formulación de dúbidas en horario de *tutorías. O alumno exporá, durante o horario dedicado ás *tutorías, as dúbidas concernentes aos contidos que se desenvolven na materia, e/ou exercicios ou problemas que se expoñan relativos á aplicación dos contidos
Prácticas de laboratorio	Formulación de dúbidas en horario de prácticas. O alumno exporá, durante o horario dedicado ás prácticas, as dúbidas relativas aos conceptos e desenvolvemento das citadas prácticas
Resolución de problemas	Formulación de dúbidas en horario de *tutorías. O alumno exporá, durante o horario dedicado ás *tutorías, as dúbidas concernentes aos contidos que se desenvolven na materia, e/ou exercicios ou problemas que se expoñan relativos á aplicación dos contidos

Avaliación

Activación	Description	Qualification	Training and Learning Results			
Resolución de problemas e/ou exercicios	Consistirá na realización de distintos exercicios ao longo do período lectivo aprobado polo centro, consistente na resolución de problemas de resposta extensa, ou exercicios e/ou cuestións teóricas, relativos aos contidos da materia desenvolvida en tempo/condicións establecido/as polo profesor. Cada unha destas actividades non superará o 40% da cualificación final da materia. Os alumnos deben desenvolver, relacionar, organizar, xustificar e presentar os coñecementos que teñen sobre os contidos da materia en respostas argumentadas. Resultados de aprendizaxe: Capacidade para coñecer, entender e utilizar os principios e fundamentos da termodinámica aplicada e a transmisión de calor, argumentando as solucións propostas	70- 80	B4 B5 B6 B7	C7	D2 D7 D9 D10	
Exame de preguntas obxectivas	Ao longo do período lectivo realizaranse varias actividades baseadas en probas escritas ou orais de resposta curta. Resultados de aprendizaxe: Capacidade para comprender, comunicar e transmitir coñecementos, habilidades e destrezas no campo da termodinámica aplicada e a transmisión de calor	20-30	B6	C7	D2 D7 D9 D10	

Other comments on the Evaluation

Todos os días lectivos consideraranse probables e susceptibles de incluír algunha actividade de avaliación continua. Estas actividades serán notificadas con suficiente antelación, e realizaranse dentro do horario lectivo aprobado polo centro, durante as sesións en aula e/ou sesións de problemas e/ou laboratorio que teñen lugar ao longo do curso. Caso de insuficiencia de medios, o profesorado articulará o mecanismo de planificación que garanta o mellor axuste ao horario.

Rexerase a realización destas actividades avaliación continua en tempo/condicións establecido/as polo profesor.

Modalidade de Avaluación Global.

O alumnado que o seu elección sexa a modalidade de avaliación global deberá obter oficialmente a renuncia á modalidade de avaliación continua, utilizando as canles previstas pola escola, e será avaliado dentro do prazo de probas oficiais (dúas oportunidades de avaliación do curso) marcado no calendario académico do curso nas datas oficiais fixadas polo centro.

Esta modalidade de avaliación global tendrá en conta todos os contidos impartidos na materia, tanto os que impartiron as clases docentes de teoría, sesións de problemas e prácticas de laboratorio, e suporá o 100% da nota máxima.

Constará de dous partes:

1.- Proba escrita consistente na resolución de problemas de resposta extensa, relativos aos contidos da materia desenvolvida e en tempo/condicións establecido/as polo profesor, e onde os alumnos deben desenvolver, relacionar, organizar, xustificar e presentar os coñecementos que teñen sobre os contidos da materia a través de respostas argumentadas. O peso sobre a cualificación final será do 70-80%

2.- Unha proba específica que incluíra tanto os contidos impartidos nas sesións de teoría como das sesións prácticas de laboratorio. Consistirá en cuestións teóricas e/ou realización dunha proba test de preguntas onde o alumno deberá transmitir os coñecementos, habilidades e destrezas relativos aos contidos teóricos da materia. Non se permitirá ningunha clase de formulario ou similar, nin calculadora nesta proba específica. O peso sobre a cualificación final será do 20-30%.

Calquera evidencia deste tipo de proba, escrita e/ou específica, consideraranse avaluable e se lles tendrá en conta para a cualificación final.

Criterios de cualificación

En todo caso, é necesario obter unha nota final igual ou superior a 5 puntos para superar a materia, en calquera das dúas oportunidades de avaliación (ordinaria e extraordinaria).

O alumnado deberá xustificar ou argumentar todos os resultados que se propoñan nas solucións propostas nos problemas de resposta longa. Non se dará ningún resultado por "sobrentendido" e terase en conta o desenvolvemento explicativo utilizado para chegar á solución proposta.

Na oportunidade de avaliación ordinaria, a cualificación do alumnado (CF), seguindo a modalidade de avaliación continua, calcularase sumando as diferentes notas obtidas nas sucesivas actividades de avaliación continua. Se a súa elección é a modalidade de avaliación global, a nota do alumno (CF) determinarase considerando a suma das notas da parte da proba escrita e da específica.

O alumnado que non superase a materia en á oportunidade ordinaria, en á oportunidade extraordinaria de avaliación, será avaliado sobre todos os contidos impartidos na materia, tanto os impartidos nas clases teóricas como nas sesións de problemas e nas prácticas de laboratorio, e terá unha puntuación de 100 % da nota máxima.

Utilizarase un sistema de cualificación numérica de 0 a 10 puntos segundo a lexislación vixente (RD 1125/2003, do 5 de setembro, BOE do 18 de setembro).

CONVOCATORIA DE FIN DE CARREIRA:

poderán ter un formato de exame distinto ao detallado anteriormente. Realizarase mediante un exame escrito no que se abordarán os aspectos máis relevantes da materia, tanto en cuestións teóricas como mediante problemas de resolución numérica que permitirán obter o 100% da avaliación e deberá ser un mínimo do 50%. chegou a superar o tema

Todas as probas deberán realizarse con bolígrafo ou bolígrafo, preferentemente azul. Non se permitirá a entrega destas probas a lapis ou bolígrafo vermello. Non se permitirá o uso de dispositivos electrónicos como tabletas, teléfonos intelixentes, reloxos intelixentes, portátiles, etc. en todas as probas, xa sexan de avaliación continua ou de avaliación global. ou dispositivos similares non autorizados

Compromiso ético.

Espérase que o alumnado presente un comportamento ético adecuado. No caso de detectarse comportamentos pouco éticos (copia, plaxio, uso de dispositivos electrónicos non autorizados, etc.), consideraranse que o alumnado non reúne os requisitos necesarios para superar a materia. Neste caso, a nota global deste curso académico será de suspenso (0,0).

Non se permitirá o uso de ningún dispositivo electrónico durante as probas de avaliación, salvo autorización expresa. O feito de introducir na aula de exames un dispositivo electrónico non autorizado terá a consideración de motivo de non superación da materia neste curso académico e a nota global será suspensa (0,0).

General description	The objective of Applied Electrotechnic is to complete the training of the students of the Degree of Engineering in Industrial Technologies in what is related with Theory of Circuits and Electric Machines. This subject will provide them specific tools to analyse and evaluate the behaviour of the electric circuits in stable and transitory regime. The subject is conceived to provide the necessary knowledge and competencies to be able to be taught some subjects in the 3rd and 4rd years of the Degree. The students would have studied previously the subjects "Basics of Theory of Circuits and Electric Machines" and "Calculus I and II" because some of the information provided in these subjects will be necessary to follow, without and extra effort, Applied Electrotechnic

Topic

UNIT I: 3-PHASE CIRCUITS, POWER MEASUREMENTS AND REACTIVE POWER COMPENSATION.

This Unit will allow the student to understand how to analyse 3-phase circuits under much balanced or unbalanced conditions

Initially the unit covers the basic concepts for the analysis of balanced circuits. It continues covering unbalanced circuits, the different methods to measure the electrical powers and the compensation of reactive power.

- Introduction: Generators, loads and 3-phase circuits
- Balanced 3-phase circuits. Voltages and currents.
- Conversion of 3-phase sources and loads.
- Analysis of balanced 3-phase circuits.
- Powers in balanced 3-phase circuits. Compensation.
- Analysis of unbalanced 3-phase circuits.

UNIT II: TRANSFORMERS

This Unit will allow the student to learn about the constructive characteristics of the transformers, to determine his characteristic parameters and to understand the machine main properties and his utilization in the electric systems.

- Analogies between electric and magnetic circuits.
- Introduction to the transformers: constructive aspects.
- The ideal transformer.
- Operation of the real transformer.
- Equivalent circuit of the single-phase transformer real: e.m.f's and voltages.
- No-load and in short-circuit tests of the transformer.
- Voltage drops, losses and performance of a transformer.
- Autotransformers.
- 3-phase transformers: Constitution, connection diagrams and tests.
- Instrument transformers.

Lecturing	The doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail.
Laboratory practical	The doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail.
Practices through ICT	The doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail.
Problem solving	The doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail.

Assessment				
Description		Qualification Training and Learning Results		
Essay questions exam	Continuous assessment (100%): At the end of each subject the student will perform a test that will be scored from 0 to 10 points. The passing grade is 5. The test will assess theoretical issues and practical exercises. In each test the student can reach 50% of the final grade. The passed partial tests are released from the corresponding part in the final exam. For students who pass all tests, the final grade will be the weighted average of the marks of the partial tests. Students who fail or fail to submit any or all partial tests, will take a final exam in the official exam that will be graded from 0 to 10 points. To pass the subject it is necessary to achieve a minimum grade of 3 points in each unit. The students approved by partial tests can modify the note and also present the final test. The examination will indicate the dates and places of publication of grades and revisions.	100	B3 C22 D1 D2 D6 D10 D14 D17	

Other comments on the Evaluation

The student only has to take the failed partial in the July exam. The July final mark will be calculated equally as for the first final mark.

General description	Nesta materia preténdese axuntar os fundamentos científicos que xustifican a relación entre estrutura, propiedades e comportamento, cos aspectos máis tecnolóxicos da forma en que esas interaccións mutuas ven afectadas polos procesos de elaboración e polas condicións de servizo.			

Resultados de Formación e Aprendizaxe

Code	
B3	CG3 Coñecemento en materias básicas e tecnolóxicas, que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacións.
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
B5	CG5 Coñecementos para a realización de medicións, cálculos, valoracións, taxacións, peritaxes, estudos, informes, planes de labores e outros traballos análogos.
B6	CG6 Capacidade para o manexo de especificacións, regulamentos e normas de obrigado cumprimento.
B11	CG11 Coñecemento, comprensión e capacidade para aplicar a lexislación relativa a instalacións industriais.
C19	CE19 Coñecementos e capacidades para a aplicación da enxeñaría de materiais.
D1	CT1 Análise e síntese.
D5	CT5 Xestión da información.
D7	CT7 Capacidade de organizar e planificar.
D9	CT9 Aplicar coñecementos.
D10	CT10 Aprendizaxe e traballo autónomos.
D15	CT15 Obxectivación, identificación e organización.
D17	CT17 Traballo en equipo.

Resultados previstos na materia

Expected results from this subject	Training and Learning Results
------------------------------------	-------------------------------

□ Coñece os principais procesos de conformación e transformación de materiais usados na industria.	B3	C19	D1
□ Demostra capacidade para seleccionar o proceso de elaboración máis adecuado para a obtención de pezas básicas a partir dun material determinado.	B4		D5
□ Coñece os principais procesos de unión dos materiais usados na industria.	B5		D7
□ Comprende as complexas interrelacións entre as propiedades dos materiais e os procesos de conformación e unión para poder optimizar as propiedades e a produtividade nunha ampla marxe de sectores industriais.	B6		D9
□ Coñece as características dos materiais máis habitualmente empregados en Enxeñaría.	B11		D10
□ Coñece a evolución dos distintos tipos de materiais e dos procesos para a súa posible conformación.			D15
□ Coñece e aplica os criterios para a selección do material máis adecuado para unha aplicación concreta			D17
□ Analiza e propón solucións operativas a problemas no ámbito da enxeñaría de materiais.			
□ Interpreta, analiza, sintetiza e extrae conclusións e resultados de medidas e ensaios.			
□ Redacta textos coa estrutura adecuada aos obxectivos de comunicación. Presenta o texto a un público coas estratexias e os medios adecuados			
□ Demostra capacidades de comunicación e traballo en equipo.			
□ Identifica as propias necesidades de información e utiliza os medios, espazos e servizos dispoñibles para deseñar e executar procuras adecuadas ao ámbito temático.			
□ Leva a termo os traballos encomendados a partir das orientacións básicas dadas polo profesor, decidindo a duración das partes, incluíndo achegas persoais e ampliando fontes de información			

Contidos

Topic

Introdución á Enxeñaría de Materiais.

Presentación da materia.

Tema 1. Fatiga	Concepto e importancia. Características das superficies de fractura. Curva S-N. Criterio de acumulación do dano de Palmgren-Miner. Efecto da tensión media: criterios de Gerber e Goodman. Factores que afectan á vida a fatiga.
Tema 2. Mecánica de fractura.	Integridade estrutural e a súa relación coa presenza de defectos. Teorías de Griffith e Irwin. Criterios de fractura en medios elásticos lineais. Análise de tensións arredor de gretas: condicións de tensión plana e de deformación plana. Tenacidade de fractura en deformación plana. Aplicación da mecánica de fractura ó crecemento da grieta baixo cargas cíclicas. Predicción da vida en servizo.
Tema 3. Termofluencia.	Efecto da temperatura na resistencia mecánica. Curva de fluencia. Parámetros de deseño. Ensaio de termofluencia para metais e polímeros. Dependencia da termofluencia coa tensión e a temperatura. Extrapolación de datos. Desenvolvemento de aliaxes resistentes a termofluencia. Selección de materiais. Mecanismos de deformación.
Tema 4. Fundamentos e tecnoloxía da corrosión.	Importancia económico-social. Clasificación dos diferentes procesos de corrosión. Corrosión electroquímica. Aspectos termodinámicos. Potencial de electrodo e diagramas de Pourbaix. Aspectos cinéticos. Velocidade de corrosión. Fenómenos de polarización. Pasivación. Métodos de control da corrosión: estratexias de deseño, modificación do material e/ou medio, protección mediante recubrimentos, protección electroquímica (catódica e anódica).
Unidade temática II: Técnicas de conformado, tratamento e unión de metais.	Características tecnolóxicas da fundición: compacidade, colabilidade e agretabilidade. Aleacións para moldeado. Moldeo direccional, moldeado de monocristais e metais amorfos. Forxa de metal líquido (Squeeze Casting). Colado e procesamento de aliaxes semisólidas (Thixofundición e thixoforxado).
Tema 5: Conformado por fundición: procesos avanzados de moldeado.	
Tema 6: Resposta dos materiais ao conformado por deformación plástica en frío e en quente.	Endurecemento por deformación plástica. Factores de influencia sobre a deformación plástica. Eliminación da acritude: recocido de recristalización. Traballo en quente: restauración e recristalización dinámicas. Estructuras obtidas por moldeado: efecto da velocidade de enfriamento e elementos de aliaxe. Conformado en frío e en quente.
Tema 7. Tratamentos térmicos e termomecánicos	Temple e templabilidade. Revenido. Temple escalonado (martempering). Transformación isotérmica bainítica (austempering). Tratamentos termomecánicos: concepto e clasificación. Tratamentos termomecánicos de alta e baixa temperatura (laminación controlada e ausformado), con deformación plástica durante a transformación (isoformado) e posteriores á transformación da austenita (marformado e perlitoformado).

Tema 8. Metalurxia da soldadura.	Clasificación de procesos s/AWS. Ciclo térmico: actores de influencia. Zonas da unión soldada. Solidificación do baño de fusión: epitaxis e crecemento competitivo. Estructura bruta de solidificación. Soldadura en varias pasadas. Zona rexenerada. Zona afectada térmicamente (ZAT). Materiais endurecidos por solución sólida. Zona de sobrequecemento. Materiais endurecidos por acritude recristalización e crecemento de gran. Materiais endurecidos por transformación. Materiais endurecidos por precipitación. Tratamentos térmicos post-soldadura.
Unidade Temática III: Materiais estruturais.	Aceiros de uso xeral laminados en quente. Aceiros microaleados. Aceiros con resistencia mellorada á corrosión atmosférica. Aceiros para temple e revido. Aceiros para baixas temperaturas. Aceiros inoxidables. Características da película pasiva. Clasificación
Tema 9. Aceros estructurales e inoxidables	
Tema 10. Aleacións de aluminio	Fortalecemento do aluminio. Clasificación xeral das aliaxes de aluminio. Aliaxes de aluminio para forxa. Aliaxes de aluminio para moldeo.
Tema 11. Materiais compostos	Definición. Vantaxes e limitacións. Tipos de materiais compostos. Materiais Poliméricos reforzados con fibras: propiedades e fabricación. Materiais Poliméricos laminados. MMC e CMC.
Temario de prácticas	Características macrográficas e micrográficas das superficies de fractura.
Práctica 1. Fractografía e comportamento a fatiga	Microscopía electrónica de varrido. Casos prácticos. Fatiga: fundamentos do ensaio. Obtención da curva de Wöhler. Análise dos factores de influencia na resistencia á fatiga. Resolución de exercicios.
Práctica 2. Tecnoloxía da corrosión. Protección anticorrosiva	Técnicas electroquímicas para o estudo dos fenómenos de corrosión. Estudo metalográfico. Técnicas de avaliación de recubrimentos. Avaliación de diferentes mecanismos de fallo.
Práctica 3: Estudo metalográfico: efecto do conformado na estrutura do material.	Estruturas obtidas por moldeo: efecto da velocidade de enfriamento e elementos de aliaxe. Conformado en frío e conformado en quente.
Práctica 4: Metalografía de aliaxes tratadas termicamente	Tratamento térmico dos aceiros. Tratamento térmico das aliaxes lixeiras.
Práctica 5: Avaliación da templabilidade. Ensaio Jominy.	Obtención da curva Jominy. Principio, obxectivo e campo de aplicación. Metodoloxía de ensaio e expresión de resultados.
Práctica 6. Inspección mediante líquidos penetrantes e partículas magnéticas.	Principio, obxectivo e campo de aplicación. Metodoloxía de ensaio e informe de inspección.
Práctica 7. Radiografía industrial e ultrasonidos (parte I)	Radiografía industrial. Principio, obxectivo e campo de aplicación. Metodoloxía de ensaio. Xeración de ultrasonidos. Métodos de emisión-recepción e impulso eco. Inspección por ultrasonidos: calibración, determinación de espesores pola técnica de ecos múltiples.
Práctica 8. Inspección por ultrasonidos (parte II).	Exame e verificación de pezas metálicas con palpador normal. Avaliación de estruturas de formigón in situ. Esclerómetro: determinación da dureza superficial e relación coa resistencia a compresión do formigón. Inspección mediante transmisión directa. Determinación da velocidade de propagación en transmisión indirecta. Correlación entre a velocidade do pulso ultrasónico e a resistencia.

Metodoloxía docente

	Description
Prácticas de laboratorio	Actividades de aplicación dos coñecementos e situacións concretas e da adquisición de habilidades básicas e procedimentais relacionadas coa materia obxecto de estudo. Desenvólvense en laboratorios con equipamento especializado.

Traballo tutelado	O estudante, de maneira individual ou en grupo, elabora un documento sobre a temática da materia ou prepara seminarios, investigacións, memorias, ensaios, resumos de lecturas, conferencias, etc. Cada grupo de traballo, elaborará un documento sobre a temática da materia proposta seguindo a guía de elaboración dispoñible a través da plataforma de teledocencia. Deberán respetarse as indicacións da guía tanto no referente a súa estrutura xeral como na súa extensión. Os integrantes do grupo deben levar a cabo unha ampla búsqueda bibliográfica consultando diversas fontes de información. Finalizada a memoria cada estudante participará na exposición do traballo do seu grupo e respostará ás preguntas plantexadas tanto por o docente como por o resto dos alumnos de outros grupos, abríndose un debate en relación á temática proposta.
Seminario	Preténdese facer un seguimento do traballo do alumno, así como resolver as dificultades que atope na comprensión dos contidos da asignatura.
Resolución de problemas	Actividade na que o profesor propón aos alumnos unha serie de problemas e/ou exercicios relacionados coa materia, para que traballe sobre eles en casa. O alumno debe desenvolver as solucións adecuadas ou correctas mediante a realización de rutinas, a aplicación de fórmulas ou algoritmos, a aplicación de procedementos de transformación da información dispoñible e a interpretación dos resultados. A resolución dos problemas farase en clase, por parte do profesor ou dalgún alumno.
Lección maxistral	Exposición oral e directa, por parte do profesor, dos coñecementos fundamentais correspondentes aos temas da materia en cuestión.

Atención personalizada

Methodologies	Description
Lección maxistral	O/A alumno/a terá unha atención personalizada a través das horas de tutorías do docente. A atención personalizada do estudante poderá ter lugar ben de xeito presencial, ben a través da plataforma de Campus Remoto, no despacho virtual do docente.
Prácticas de laboratorio	O/A alumno/a terá unha atención personalizada a través das horas de tutorías do docente. A atención personalizada do estudante poderá ter lugar ben de xeito presencial, ben a través da plataforma de Campus Remoto, no despacho virtual do docente.
Traballo tutelado	O/A alumno/a terá unha atención personalizada a través das horas de tutorías do docente. A atención personalizada do estudante poderá ter lugar ben de xeito presencial, ben a través da plataforma de Campus Remoto, no despacho virtual do docente.
Seminario	non hai grupos C

Avaliación

Description		Qualification	Training and Learning Results
Prácticas de laboratorio	As actividades formativas de carácter práctico avaliaránse segundo os criterios de asistencia e grao de participación, informes de desenvolvemento de prácticas e unha proba de avaliación ó fin do período de impartición das clases prácticas.	20	D5 D9 D10 D15 D17
Traballo tutelado	Avaliaranse polos informes presentados, e a exposición en clase dos traballos. Dado que cada estudante participará en la exposición del trabajo de su grupo y responderá a la preguntas planteadas tanto por el docente como por el resto de los alumnos de otros grupos, se evaluará tanto la calidad de la memoria presentada como las competencias relativas al trabajo en grupo y a la exposición/comunicación de ideas en el ámbito de la ingeniería.	10	B3 D9 B4 D10 B11 D15 D17
Lección maxistral	Farase mediante dúas probas escritas (preguntas cortas, problemas e tipo test) que recolla os coñecementos adquiridos por o alumno ao longo de todo o curso. Unha proba farase durante o período de impartición da materia (30%) e a outra na data fixada polo centro (40%)	70	B3 D5 B4 D7 B5 D9 B6 D10 B11 D15

Other comments on the Evaluation

PRIMEIRA EDICIÓN:

a) Modalidade de Avaliación continua

A avaliación continua realizarase durante o período de impartición da materia. Para superar a materia o alumno deberá acadar un 5 ou superior. A contribución de cada proba a nota é como segue:

- 1) Avaliación dos contidos de prácticas mediante proba escrita, elaboración e entrega da memoria de prácticas (20% da cualificación).
- 2) Elaboración e presentación dun traballo (10% da cualificación).
- 3) Primeira proba escrita dos contidos impartidos nas clases non prácticas (30% da cualificación). Esta proba está programada para mediados do cuatrimestre de impartición da materia , na semá habilitada polo Centro.
- 4) Segunda proba escrita dos contidos impartidos nas clases non prácticas (40% da cualificación). Esta proba levaráse a cabo na data oficial marcada polo centro para realizar a avaliación global da materia.

Para superar a materia na primeira edición da acta por avaliación continua, deberáse acadar un 40% como mínimo en cada unha das probas escritas ou a suma das notas correspondentes as dúas probas deberá acadar un mínimo de 3,5 puntos , e dicir, un 50% de 7.

O alumno, unha vez realizada a primeira proba e non acadar o mínimo, poderáse presentar a través da modalidade de Avaliación global, renunciando por escrito a avaliación continua no prazo establecido polos profesores responsables..

b) Modalidade de Avaliación global.

Aqueles alumnos que renuncien á metodoloxía de avaliación continua e polo tanto empreguen a metodoloxía de avaliación global, farán un exame sobre a totalidade dos contidos da materia (impartidos tanto nas clases teóricas como nas prácticas) na data marcada polo centro, sobre unha puntuación de 10 puntos, sendo preciso acadar 5 puntos.

SEGUNDA EDICIÓN (exame de Xullo):

Na segunda edición da acta:

- a) Aqueles alumnos que na edición anterior se avaliaron pola modalidade da Avaliación continua, se o desexan, poderán manter as cualificacións dos apartados 1) e 2). Neste caso, serán avaliados mediante unha proba escrita, sobre os contidos impartidos nas clases teóricas. A proba representará un 70% da cualificación final, sendo preciso acadar un mínimo do 50%, para que a nota desta proba pódase sumar ás obtidas nos apartados 1) e 2). Esta proba realizarase na data oficial fixada polo centro.
- b) Modalidade de Avaliación global: Nesta modalidade o alumno fará unha proba escrita que avaliará a totalidade dos contidos da materia, impartidos nas clases de teoría e de prácticas. Para superar a materia o alumno deberá obter 5 puntos sobre 10. Esta proba realizarase na data oficial fixada polo centro para a segunda oportunidade.

Compromiso Ético: Espérase que o alumno/a presente un comportamento ético adecuado, tal como se recolle nos Artigos 39, 40, 41 e 42 do Regulamento sobre a avaliación, a calificación e a calidade da docencia e do proceso de aprendizaxe do estudantado, aprobado no Claustro do 18 de Abril do 2023. No caso de detectar un comportamento non ético (copia, plaxio, emprego de aparellos eléctricos non autorizados, e outros) considerarase que o alumno non reune os requisitos necesarios para superar a materia. Neste caso, a cualificación global non presente curso académico sera de suspenso (0.0).

AVISO: No suposto de haber discrepancias entre as diferentes versións lingüísticas da guía, prevalecerá o recollido na versión de galego.

Compromiso Ético: Espérase que o alumno/a presente un comportamento ético adecuado, tal como se recolle nos Artigos 39, 40, 41 e 42 do Regulamento sobre a avaliación, a calificación e a calidade da docencia e do proceso de aprendizaxe do estudantado, aprobado no Claustro do 18 de Abril do 2023. General description	The main goals of Physics III are: a) To get a deeper understanding of the physical foundations of engineering, specifically those related to electromagnetic and wave phenomena. b) To introduce the use of mathematical tools, in particular vector analysis and differential equations and their associated boundary value problems, within the framework of problems and models in Physics. c) To combine theoretical education and a practical engineering approach, stressing the relevance of fundamentals to deal with problem analysis and synthesis of solutions in real-life situations. d) To relate the topics in the fundamentals of electromagnetism and wave phenomena to the contents of other more technological subjects included in the curriculum for the Degree. The topics of Physics III are, essentially, an introduction to wave phenomena in general (three units) and the study of classical electromagnetism using an axiomatic approach employing a mathematical treatment based on differential vector operators (four units).			

Training and Learning Results	
Code	
B10	CG10 Ability to work in a multidisciplinary and multilingual environment.
C2	CE2 Understanding and mastering the basics of the general laws of mechanics, thermodynamics, waves and electromagnetic fields, as well as their application for solving engineering problems.
D10	CT10 Self learning and work.

Expected results from this subject			
Expected results from this subject		Training and Learning Results	
To know and to understand the physical foundations of electricity and magnetism as well as of vibrations and waves.		B10	C2
To know and to be able to apply, in simple cases, vector analysis and differential equations of mathematical physics, as problem solving tools within the framework of fundamentals of physics.		B10	C2
To be able to establish efficient strategies and procedures for solving problems in fundamentals of physics related to industrial technologies.		B10	C2
To be able to implement specific solutions in the laboratory to experimental problems in fundamentals of physics.		B10	C2 D10

Contents	
Topic	
I.1. WAVE MOTION	1.1. Wave phenomena 1.2. Fundamental characteristics of waves 1.3. The wave equation 1.4. Plane waves 1.5. Wavefront and wavevector 1.6. Cylindrical and spherical waves 1.7. Longitudinal and transverse waves 1.8. Huygens' principle 1.9. Reflection and refraction of waves

I.2. MECHANICAL WAVES	2.1. The nature of mechanical waves 2.2. Longitudinal waves in thin rods 2.3. Longitudinal waves in springs 2.4. Transverse waves in strings 2.5. Power flow and intensity of a wave 2.6. Longitudinal waves in fluids
I.3. DESCRIPTION OF PHYSICAL QUANTITIES BY MEANS OF VECTOR ANALYSIS	3.1. Differential of arc of a curve 3.2. Scalar fields 3.3. Directional derivative 3.4. Gradient 3.5. Vector fields 3.6. Flux of a vector field 3.7. Solenoidal fields 3.8. Divergence of a vector field 3.9. Ostrogradski-Gauss' theorem or divergence theorem 3.10. Divergence of a solenoidal field 3.11. Circulation of a vector field 3.12. Rotation or curl of a vector field 3.13. Stokes' theorem 3.14. Conservative fields
II.1. GENERAL EQUATIONS OF ELECTROMAGNETISM	1.1. Definition of electric and magnetic fields 1.2. Field sources: macroscopic electric charges and currents 1.3. Relations among fields E and B and their sources: Maxwell's equations 1.4. Free charge 1.5. Polarization charge 1.6. Electric current 1.7. Polarization current 1.8. Magnetization current 1.9. Maxwell's equations as a function of fields E, D, B, and H 1.10. Boundary conditions for electromagnetic fields 1.11. Electrodynamical potentials 1.12. The energy law of the electromagnetic field
II.2. TIME-INDEPENDENT FIELDS: ELECTROSTATICS, STEADY ELECTRIC CURRENT AND MAGNETOSTATICS	2.1. Fundamental equations of electrostatics 2.2. Electric dipole 2.3. Fundamental equations for steady electric current 2.4. Equations including media properties 2.5. Electrical resistance 2.6. Joule's law 2.7. Electromotive forces and generators 2.8. Potential distribution in a resistor 2.9. Fundamental equations of magnetostatics 2.10. Equations including media properties 2.11. Magnetic forces 2.12. Magnetic circuit 2.13. Magnetic dipole
II.3. ELECTROMAGNETIC INDUCTION AND QUASISTATIC FIELDS	3.1. Electromagnetism in moving media 3.2. Galilean transformation of electric and magnetic fields 3.3. Electromotive force around a circuit 3.4. Faraday's law of electromagnetic induction 3.5. Definition of quasistatic fields 3.6. Self-inductance and mutual inductance 3.7. Magnetic energy
II.4. ELECTROMAGNETIC WAVES	4.1. Wave equations for fields E and H 4.2. E.M. monochromatic plane waves in lossless media 4.3. E.M. monochromatic plane waves in lossy media 4.4. Incidence of a plane wave on an interface between two perfect dielectrics 4.5. Incidence of a plane wave on an interface between a perfect dielectric and a conductor
III.1 LABS: STRUCTURED ACTIVITY SESSIONS	1.1 Structured activity sessions: - Experimental data processing (approximate quantities, measurement of physical magnitudes, error estimation) - Adequate operation with basic measurement instruments (flex-meter, micrometer, multimeter (analog and digital), oscilloscope) - Laboratory experiments with mechanical or electromagnetic waves (emission and reception of ultrasonic waves, microwaves or light waves, standing waves along one direction, Michelson interferometer)

III.2 LABS: UNSTRUCTURED ACTIVITY (OPEN LAB) SESSIONS

2.1. Unstructured activity (open lab) sessions:

- A practical problem, formulated with basic initial data, will be assigned to each working team. Then, under the teacher's supervision, each team must analyze the problem, select a possible solution and carry it out in the lab
- For the open lab problems, a diversity of topics and experimental techniques are considered within the field of wave and electromagnetic phenomena, in particular, electric current conduction and electromagnetic induction in quasi-static regime
- As a reference, some open lab problems that can be proposed are: measuring the electric field on a weakly conducting sheet, numerical solution of the Laplace equation, measuring the self-inductance of a coil or a solenoid, measuring the mutual inductance of two coils or two solenoids

Methodologies	
	Description
Lecturing	The main topics of the subject are introduced by the teacher using projected presentations and the chalkboard, emphasizing the theoretical basis and fundamentals and stressing the critical or key points. Occasionally, demonstrative experiments or audiovisual material may be employed
Problem solving	Academic problems related to the topics of the subject are formulated and worked out at the chalkboard by the teacher or the students. By practicing standard schemes, formulas or algorithms and by analyzing the results, the student must develop adequate skills to be able to obtain the correct solution to the problem on his/her own at the end of the course
Laboratory practical	Activities for applying the knowledge to particular situations and for developing basic and procedural skills related to the subject. These activities will be held in specific rooms with specialized equipment (laboratory and computer rooms)

Assessment				
	Description	Qualification	Training and Learning Results	
Essay questions exam	Tests that includes open questions on a topic. Students should develop, relate, organize and present knowledge on the subject in an argued response	50	B10	C2
Problem and/or exercise solving	Test in which the student must solve a series of problems and/or exercises in a time/conditions set by the teacher	40	B10	C2 D10
Report of practices, practicum and external practices	Each team should write a report on the activities carried out. The report must include the tasks and procedures developed, the results obtained or the observations taken, as well as a detailed description of the data processing and analysis	10	B10	C2 D10

Other comments on the Evaluation

1. Ordinary call (December-January)

1.1 Continuous assessment

- The final mark G0 results from the classroom mark A0 (80% of the final mark), on topics of Parts I and II, and the lab mark

L0 (20% of the final mark), on topics of Part III.

- Mark A0 combines the classroom mark C0 (40% of the final mark), that is obtained from theoretical-practical tests (essay-questions and problem/exercise solving) to be developed during the term, and the classroom mark F0 (40% of the final mark), that is obtained from an end-of-term theoretical-practical test to be held on the same date that the exam of the ordinary call.

- Mark L0 combines the mark L01 (10% of the final mark), that is obtained from theoretical-practical tests to be developed during the term (essay-questions and problem/exercise solving) on topics of Part III.1, and the mark L02 (10% of the final mark) that is obtained from a lab report corresponding to topics of Part III.2. In addition, after each lab session of Part III.1 a lab report must be handed in. Only students that have regularly attended the lab sessions and delivered all the reports can obtain a mark L0 different from "0,0".

- The final mark of the continuous assessment in the ordinary call is obtained as

$$G0 = A0 (80\%) + L0(20\%) = C0 (40\%) + F0 (40\%) + L01 (10\%) + L02 (10\%)$$

1.2 Global assessment

- The final mark G1 results from the classroom mark A1 (80% of the final mark), on topics of Parts I and II, and the lab mark L1 (20% of the final mark), on topics of Part III.1.

- Mark A1 combines marks C1 (40% of the final mark) and F1 (40% of the final mark), that are obtained from theoretical-practical tests (essay-questions and problem/exercise solving).

- Mark L1 (20% of the final mark) is obtained from a theoretical-practical test (essay-questions and problem/exercise solving).

- The final mark of the global assessment in the ordinary call is obtained as

$$G1 = A1 (80\%) + L1(20\%) = C1 (40\%) + F1 (40\%) + L1 (20\%)$$

2. Extraordinary call (June-July)

- All students, whether they have waived continuous assessment or not, will obtain 100% of their final mark G2 from an exam corresponding to the extraordinary call.

- The final mark G2 results from the classroom mark A2 (80% of the final mark), on topics of Parts I and II, and the lab mark L2 (20% of the final mark), on topics of Part III.1.

- Mark A2 combines marks C2 (40% of the final mark) and F2 (40% of the final mark), that are obtained from theoretical-practical tests (essay-questions and problem/exercise solving).

- Mark L2 (20% of the final mark) is obtained from a theoretical-practical test (essay-questions and problem/exercise solving).

- The final mark of the continuous or global assessment in the extraordinary call is obtained as

$$G2 = A2 (80\%) + L2(20\%) = C2 (40\%) + F2 (40\%) + L2 (20\%)$$

3. Common features and interconnection among the assessment alternatives

- In the continuous and global assessment modalities for the ordinary and extraordinary calls that have been defined in the previous sections, we can classify marks that are equivalent to each other in three sets with three elements each: classroom marks C0, C1 and C2, classroom marks F0, F1 and F2 and lab marks L0, L1 and L2. If C is the most recent valid mark from C0, C1 and C2, F is the most recent valid mark from F0, F1 and F2 and L is the most recent valid mark from L0, L1 and L2, the final mark G in the ordinary or the extraordinary call, either for continuous or global assessment, is obtained as

$$G = C(40\%) + F (40\%) + L(20\%)$$

- To pass the course, a student must obtain a final mark G equal to or higher than 5 in any of the assessment alternatives.

- To obtain the final mark G1 in the ordinary call the students, whether they have waived continuous assessment or not, can choose between:

a) answering the part of the exam of the ordinary call corresponding to marks C1, F1, and/or L1, that will be used in the formula of the final mark of the ordinary call G1.

b) use the most recent valid mark of each type (C0, F0 and/or L0) to be used instead of marks C1, F1 and/or L1, respectively,

in the formula of the final mark of the ordinary call G1, not taking the corresponding part of the exam of this call.

- To obtain the final mark G2 in the extraordinary call the students, whether they have waived continuous assessment or not, can choose between:

a) answering the part of the exam of the extraordinary call corresponding to marks C2, F2, and/or L2, that will be used in the formula of the final mark of the extraordinary call G2.

b) use the most recent valid mark of each type (C0 or C1, F0 or F1 and/or L0 or L1) to be used instead of marks C2, F2 and/or L2, respectively, in the formula of the final mark of the extraordinary call G2, not taking the corresponding part of the exam of this call.

4. End-of-degree call

- The end-of-degree call follows the same assessment scheme as the extraordinary call.

- The end-of-degree assessment is completely independent of the assessments in the ordinary and extraordinary calls (in particular, the features and interconnections described in the previous section do not apply).

5. Supplementary assessment rules

- Students who do not take any of the tests (C, F, L) on the day of the final test will receive a grade of "no presentado" for that call.

- Students should not have access to or use any electronic device during the tests and exams, unless specifically authorized. The mere act of taking an unauthorized electronic device into the examination room will result in the student failing the subject and the final mark in the corresponding call will be "suspense (0,0)".

- The tests and exams will be jointly set and assessed by the teaching team of the subject.

- The dates for the final test and exams in each call will be assigned by the board of directors of the School of Industrial Engineering (E.E.I.).

6. Ethical commitment

Every student is expected to behave in an appropriate ethical manner. Should unethical conduct be detected (copying, plagiarism, utilization of unauthorized electronic devices, or others), the student will be considered not to have fulfilled the necessary requirements to pass the subject. In this case, the final mark in the corresponding call will be "suspense (0,0)".

Other comments on the Evaluation

Global assessment: in the two official editions the renounce to the continuous assesment and the choice of the global assessment system must be made following the procedure and the terms established by the centre. It consists of a written exam in the official date fixed by the School that weights 100% of the mark, in which all the theoretical and practical contents will be evaluated.

Ordinary call: Continuous assessment. It consists of several tests made along the course and a final exam in the official date previously fixed by the centre. In this final exam, a minimum mark of 4 out of 10 is required to pass the subject. To pass, the global mark must be, at least, of 5 out of 10. In case of not reaching the minimum mark in the final exam, the student will obtain a mark of 4.5.

Extraordinary call. The grade of the students will be calculated in the two cases: considering continuous assessment (continuous assessment tests = 60 %, final exam = 40%, and minimum mark of 4 out of 10), and considering global assessment (final exam = 100%); and the maximum of both will be assigned. The exam will take placed in the official date previously fixed by the centre. In this final exam, a minimum mark of 4 out of 10 is required to pass the subject. To pass, the global mark must be, at least, of 5 out of 10. In case of not reaching the minimum mark in the final exam, the student will obtain a mark of 4.5.

Ethical behaviour: it is expected that the student exhibits an ethical behaviour, paying especial attention to the indicated in the Articles 39, 40, 41 and 42 of the *Regulation on the assessment, the calification and the quality of the teaching and of the process of learning of the student of the Universidade of Vigo* (approved in the meeting of 18 April 2023).

WARNING: In case of discrepancies between the distinct language versions of the guide, the indicated in the Spanish version will prevail.

Lección maxistral	O profesor atenderá persoalmente as dúbidas e preguntas do alumnado.
Prácticas con apoio das TIC	O profesor atenderá persoalmente as dúbidas e preguntas do alumnado.

Avaliación

	Description	Qualification	Training and Learning Results	
Exame de preguntas de desenvolvemento	Realizarase un exame final de resolución de problemas na aula informática onde se poderán utilizar os programas preparados polo alumno, sobre os contidos de toda a materia.	40	B3	D1 D2
Resolución de problemas e/ou exercicios	Avaliación continua: Asistencia as clases teóricas e practicas (10%). Presentación dunha worksheet en Sage cos traballos propostos ó alumno: Traballo 1º (metade de curso): (20%) Traballo 2º (final de curso): (30%)	60	B3	D1 D2

Other comments on the Evaluation

Para os alumnos que renuncien á avaliación continua o exame final suporá o 100% da nota.

A avaliación dos alumnos en segunda convocatoria consistirá nun exame sobre os contidos da totalidade da materia, que suporá o 100% da nota.

COMPROMISO ÉTICO:

"Esperase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) se considerará que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a calificación global no presente curso académico será de suspenso (0.0)."

General description	This subject is intended to allow the students to apply the fundamentals of Mechanism and Machines Theory to the design of machines as well as the necessary knowledge, comprehension, and application of these concepts concerning to the field of Mechanical engineering. It also provides the students with the most important concepts related to the design of machines. The students will know and apply analysis methods for the design of machines by applying analytical methods or/and through the effective use of simulation software.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
B5	CG5 Knowledge to carry out measurements, calculations, assessments, appraisals, surveys, studies, reports, work plans and other similar works.
B6	CG6 Capacity for handling specifications, regulations and mandatory standards.
B11	CG11 Knowledge, understanding and ability to apply the legislation relating to industrial installations.
C13	CE13 Knowledge of the principles of the theory of machines and mechanisms.
C26	CE26 Knowledge and abilities to calculate, design and test machines.
D2	CT2 Problems resolution.
D9	CT9 Apply knowledge.
D16	CT16 Critical thinking.
D20	CT20 Ability to communicate with people not expert in the field.

Expected results from this subject

Expected results from this subject	Training and Learning Results		
Knowledge of calculation methods applied in Mechanical design.	B3 B4 B5	C13 C26	D2 D9 D16

Laboratory practical	There is only one practice group available for the classes held in English, so students must attend to their assigned group

Assessment

	Description	Qualification	Training and Learning Results	
Laboratory practical	Attendance and participation as well as practices reports, papers, and tests will be rated. However, to be evaluated, students must attend a minimum of 7 practice sessions; otherwise, students won't be evaluated and will get 0 points. Learning outcomes: all will be graded	30	C13 C26	D2 D9 D16 D20
Problem and/or exercise solving	It will evaluate in questionnaires focused to the corresponding problems to the knowledges given during the classes of classroom and laboratory. They evaluate all the results of learning.	30	B3 B4 B5 B6	C13 C26 D9 D16
Problem and/or exercise solving	Final and mid-term tests will be focused on the contents taught at classes and laboratory sessions. Learning outcomes: all will be graded	40	B11 C26	C13 D9 D16

Other comments on the Evaluation

General outline 1 Edition

1 . Practical asynchronous quizzes; Term 1 week; Max grade: 3; Minimum grade: 1; Type of min.: Sum; Results are saved for 2 ED.

2 . Asynchronous Questionnaires; Term 1 week; Limited time: 1 hour; Max grade: 3; Minimum note: 1; Type of min.: Sum; No results are saved for 2 ED.

3 . Academic final exam; official date; Limited time: 1 hour; Max grade: 4 ; Note min.: 1.5; Type of min.: Veto; If the minimum is not reached, the maximum grade of the subject is 3 out of 10.

General scheme 2 Edition

1 . Practical asynchronous quizzes; Term 1 week; Max grade: 3; Minimum note: 1; Type of min.: Sum; Results of the 1 ED are saved.

2 . Academic final exam; official date; ; Max grade: 7 ; Note min.: 2.8; Type of min.: Veto; If the minimum is not reached, the

maximum score of the subject is 3.9 out of 10.

General outline Disclaimer EC 1 Edition

1 . Practical exam; Max grade: 3; Minimum grade: 1; Type of min.: Sum; Results are saved for 2 ED.

2 . Academic final exam; official date; ; Max grade: 7 ; Note min.: 2.8; Type of min.: Veto; If the minimum is not reached, the maximum score of the subject is 3.9 out of 10.

General outline Disclaimer EC 2 Edition

1 . Practical exam; Max grade: 3; Minimum grade: 1; Type of min.: Sum; Results of the 1 ED are saved.

2 . Academic final exam; official date; ; Max grade: 7 ; Note min.: 2.8; Type of min.: Veto; If the minimum is not reached, the maximum score of the subject is 3.9 out of 10.

"Ethical commitment: The student is expected to present adequate ethical behavior. In case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, and others) it will be considered that the student does not meet the necessary requirements to pass subject. In this case, the overall grade for this academic year will be fail (0.0)."

The use of any electronic device during the evaluation tests will not be allowed unless expressly authorized. The fact of introducing an unauthorized electronic device into the exam room will be considered a reason for not passing the subject in this academic year and the overall grade will be failed (0.0)."

*A numerical rating system from 0 to 10 points will be used according to current legislation (RD 1125/2003 of September 5, BOE of September 18).

General description	This course will study the fundamentals of elasticity and deepen the study of mechanics of materials in order to be able to apply their knowledge to the actual behavior of solids (structures , machinery and resistant elements in general). This course, along with mechanics of materials course, is a holder of more specialized subjects whose object is the mechanical design.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
C14	CE14 Knowledge and use of the principles of strength of materials.
D2	CT2 Problems resolution.
D5	CT5 Information Management.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D17	CT17 Working as a team.

Expected results from this subject

Expected results from this subject	Training and Learning Results			
Knowledge of the foundations of the elasticity theory	B3	C14		
Further deepening on mechanics of materials and stress analysis	B3	C14	D2	
	B4		D10	
Knowledge of deformations in beams and shafts	B3	C14	D2	
	B4		D9	
Ability to apply the knowledge of elasticity and mechanics of materials, and to analyze the mechanical performance of machines, structures, and general structural elements	B4	C14	D2	
			D5	
			D9	
Ability to take decisions about suitable material, shape and dimensions for a structural element subjected to a specific load	B4	C14	D2	
			D5	
			D9	
			D17	
Knowledge of different solving methods for structural problems and ability to choose the most suitable method for each specific problem	B4	C14	D2	
			D5	
			D9

Methodologies

	Description
Introductory activities	Introduction to the subject: Course aims, expected learning outcomes, course syllabus, teaching methods, assessments and grading policy.

Previous studies	Student previous activities to lectures. The students will receive detailed instructions to complete and send certain exercises before lectures/laboratory sessions. The purpose of this assessment is to optimize the session outcome. The delivery of these exercises will modify the obtained qualification of the continuous assessment (laboratory practices and conceptual tests) as explained in the section of "Other comments and second call" in this guide.
Lecturing	The contents of the subject will be presented in a organized way. Special emphasis will be put on the fundamentals of the subject and on the most troublesome points. To improve the comprehension, the contents of the next lectures will be announced on Tema platform on a weekly basis.
Problem solving	Each week will devote a time to the resolution by part of the student of exercises or problems proposed, related with the content studied in each moment.
Laboratory practical	Application of theory concepts to laboratory collaborative works.
Autonomous problem solving	The students will be supplied with exercises and problems to solve, the solutions will be provided for level self-evaluation.

Personalized assistance

Methodologies	Description
Autonomous problem solving	The lecturers are at disposal of the students during office hours to solve any question related to the subject contents. The students will be able to verify if the completed assignments are correct and to identify the mistakes of miscalculations. The detailed schedule will be provided to the students at the beginning of the course through the TEMA platform. Any modification will be previously announced.

Assessment

	Description	Qualification	Training and Learning Results
Laboratory practical	Active participation in all classes will be valued, and when applicable, the submission of the lab reports and their content will be assessed according to the guidelines provided by the lecturers. The grading will be on a scale of 0 to 10. It will be added to the average obtained in the problem-solving tests, only in the event that it reaches the minimum required	5	B4 C14 D2 D5 D9 D10 D17
Problem and/or exercise solving	Several tests will be proposed to assess the acquired learning results in the subject. They will consist of problem-solving and/or theoretical questions by the students. None of these tests will exceed 40% of the overall grade for the subject. The tests will be conducted throughout the course during class hours and/or on dates/times approved by the institution. The final test will be performed during the official examination schedule approved by the "Comisión Permanente" of the School of Industrial Engineering. It will be graded on a scale of 0 to 10. The minimum average grade for all tests will be 4.5/10. In the second opportunity of the course's examination session, there will be a single test that encompasses all the content of the subject, carrying a weight of 100% of the final grade. In this case, the minimum mark to pass the subject will be 5/10. The duration of the test, as well as the weight of each question, will be provided at the time of the test.	95	B3 C14 D2 B4 D9

Other comments on the Evaluation

It will be necessary to obtain a minimum score of 5 out of 10 to pass the subject. Students who have been granted with the waive of continuous assessment may take the final exam, which will be the 100% of the final mark. This exam will assess the competencies covered in the entire subject.

Comments regarding continuous assessment activities:

The failure to submit lab reports, whether justified or not, will not result in the repetition of the lab practice on a different date.

The dates and locations for all exam sessions will be set by the School of Industrial Engineering before the start of the course and will be made public. This information can be consulted on the link: <https://eei.uvigo.es/gl/alumnado/planificacion-academica/>

Ethical commitment: it is expected an adequate ethical behavior of the student. If any unethical behavior is detected (cheating, plagiarism, unauthorized use of electronic devices, etc.), it will be considered that the student does not meet the necessary requirements to pass the course. In such cases, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Metodoloxía docente

	Description
Lección maxistral	As clases teóricas realizaranse combinando as explicacións de lousa co emprego de presentacións de computador e vídeos.
Resolución de problemas	Presentación e resolución por parte do profesor de problemas relativos aos procesos de fabricación estudados de maneira teórica coa participación activa das/os estudantes.
Prácticas con apoio das TIC	Introdución ao emprego de software de simulación de procesos de fabricación por parte do profesor. Coas instrucións recibidas e traballo autónomo, as/os estudantes poderán resolver problemas específicos que permitan mellorar o seu coñecemento sobre os procesos estudados.

Other comments on the Evaluation

PRIMEIRA OPORTUNIDADE:

a) Modalidade de Avaliación continua

A avaliación continua realizarase durante o período de impartición da materia. Nesta modalidade, todas as probas son obrigatorias. A contribución de cada proba á nota total é como segue:

- Unha proba de avaliación durante o curso (40% da cualificación final total).
- Elaboración e presentación dos traballos de prácticas (20% da cualificación final total).
- Exame Final da materia (40% da cualificación final total), na data marcada polo centro.

A proba de avaliación realizada durante o curso e o exame final incluírán: preguntas obxectivas e problemas, sendo a ponderación de cada parte o 50% do total das mesmas.

b) Modalidade de Avaliación global.

A renuncia á avaliación continua farase segundo os procedementos e prazos que defina o centro.

Aqueles estudantes que renuncien á metodoloxía de avaliación continua terán que realizar un exame escrito en data oficial coas mesmas tres partes e porcentaxes da avaliación continua.

Para superar a materia na Primeira Oportunidade en calquera das dúas modalidades, deberase alcanzar un 40% como mínimo en cada un dos tres apartados e alcanzar unha nota total igual ou superior a 5 (escala 0 a 10). De non cumprirse este

requisito, a nota que figurará na acta non poderá ser nunca superior a un "4,9" (escala 0 a 10)

SEGUNDA OPORTUNIDADE:

a) Modalidade de Avaliación continua

Aqueles estudantes que na Primeira Oportunidade avaliáronse pola modalidade de Avaliación continua, si deséxano, poderán manter as cualificacións dos tres apartados a condición de que sexan aprobadas (nota igual ou maior a 5 en escala 0 a 10) na Primeira Oportunidade. En caso contrario deberán acollerse á modalidade de "Avaliación Global"

b) Modalidade de Avaliación global:

Mantéñense os criterios establecidos na Primeira Oportunidade.

Para superar a materia na Segunda Oportunidade en calquera das dúas modalidades, deberase alcanzar un 40% como mínimo en cada un dos tres apartados e alcanzar unha nota total igual ou superior a 5 (escala 0 a 10). De non cumprirse este requisito, a nota que figurará na acta non poderá ser nunca superior a un "4,9" (escala 0 a 10)

Compromiso Ético: Esperar que o alumno/a presente un comportamento ético adecuado, tal como recóllese nos Artigos 39, 40, 41 e 42 do Regulamento sobre a avaliación, a cualificación e a calidade da docencia e do proceso de aprendizaxe do estudiantado, aprobado no Claustro do 18 de Abril de 2023. No caso de detectar un comportamento non ético (copia, plaxio, uso de aparellos eléctricos non autorizados, e outros) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso, a cualificación global no presente curso académico será de suspenso (0.0).

AVISO: No suposto de haber discrepancias entre as diferentes versións lingüísticas da guía, prevalecerá o recolleito na versión de castelán.

Contidos

Topic	
TEMA I - INTRODUCCIÓN ÁS MÁQUINAS ELÉCTRICAS ROTATIVAS	I.1 -Fundamentos electromagnéticos e electromecánicos. I.2 -.- Consideracións previas sobre as máquinas eléctricas rotativas: Constitución física xeral. Tipos de máquinas. Perdas. Balance de potencias. Rendemento. Quecemento. Potencia nominal. Tipos de illantes. Graos de protección mecánica e formas construtivas. Normas. Placa de características. I.3.- Aspectos construtivos. Polos magnéticos. Liña neutra. Paso polar. I.4.- FMM no entreferro e FEM inducida na MER: Campo magnético producido por devanados concentrados e distribuídos. Campo magnético xiratorio. Factores que afectan á FMM inducida nun devanado. FEM inducida nun devanado dunha MER

TEMA II: MÁQUINAS ASÍNCRONAS

- II.1.- A máquina asíncrona trifásica:
- Constitución.
 - Principio de funcionamento como motor.
 - Circuito equivalente.
 - Ensaíos.
 - Balance de potencias e rendemento.
 - Par e característica par-deslizamento.
 - Modos de funcionamento.
 - Arranque e regulación de velocidade.
- II.2.- Motor de indución monofásico:
- Constitución e principio de funcionamento.
 - Circuito equivalente e métodos de arranque.

TEMA III: MÁQUINAS SÍNCRONAS

- Constitución
- Funcionamento como xerador. Reacción de inducido.
- Circuíto equivalente
- Funcionamento dun xerador axustado a unha rede de potencia infinita.
- Motor síncrono: Características e aplicacións

TEMA IV: MOTORES DE CORRENTE CONTINUA E MOTORES ESPECIAIS

- IV.1. Máquinas de corrente continua
- Constitución das máquinas de CC.
 - Principio de funcionamento como motor.
 - Sistemas de excitación.
 - Reacción de inducido
 - Conmutación
 - Regulación de velocidade dos motores de CC.
- IV.2. Motores eléctricos especiais

TEMA V: MANDO E PROTECCIÓN DAS MÁQUINAS ELÉCTRICAS

- Dispositivos de mando das máquinas eléctricas: esquemas de mando orientados á seguridade na operación das máquinas
- Sistemas de protección das máquinas eléctricas: elementos e sistemas de protección orientados á seguridade de máquinas e persoas

Metodoloxía docente

	Description
Lección maxistral	Exposición por parte do profesor dos contidos sobre a materia de máquinas eléctricas.
Prácticas de laboratorio	Actividades de aplicación dos coñecementos teóricos a situacións concretas e de adquisición de habilidades básicas e procedimentales relacionadas coas máquinas eléctricas rotativas. Os alumnos aprenderán os métodos activos e pasivos de protección para conseguir unha suficiente seguridade das persoas e das máquinas. Desenvolverase no laboratorio de máquinas eléctricas correspondente.
Prácticas con apoio das TIC	Actividade na que se formulan problemas e exercicios relacionados coa materia de máquinas eléctricas rotativas. O profesor resolverá problemas tipo de máquinas rotativas e o alumno debe resolver problemas similares.

Atención personalizada

Methodologies	Description
Lección maxistral	O profesor atenderá as dúbidas que podan presentar os alumnos correspondentes á materia que se está expondo en cada momento da sesión. Ademais, nas horas asignadas a tutorías, o profesor atenderá calquera dúbida relacionada ca materia.
Prácticas de laboratorio	Durante a realización das prácticas, o profesor atenderá persoalmente as dúbidas que poidan expor os alumnos.
Prácticas con apoio das TIC	Durante a realización das prácticas na aula de informática, o profesor atenderá persoalmente as dúbidas que poidan expor os alumnos.

Avaliación

Description		Qualification	Training and Learning Results
Prácticas de laboratorio	A avaliación da parte práctica de laboratorio realizarase de forma continua (sesión a sesión). Os criterios de avaliación son: - Asistencia mínima do 80%. -Puntualidade. - Preparación previa das prácticas. - Utilización correcta do material. -Os resultados entregados por cada alumno ou grupo ao finalizar cada práctica, nos casos que así se esixa e os cuestionarios relativos a práctica si os houbese. A non asistencia a unha sesión de prácticas supón que será puntuada con 0 puntos. Unha asistencia a clases de practicas inferior ao 80% supón que a nota total de prácticas é de cero puntos. Para poder aprobar a materia é necesario obter unha nota mínima do 40%, sobre a nota máxima nesta parte.	10	B3 C10 D1 D2 D14 D16 D17 D19
Prácticas con apoio das TIC	A avaliación continua das prácticas con apoio das TIC realizarase conforme aos seguintes criterios: - Asistencia mínima do 80%. -Puntualidade. - Preparación previa -Resultados entregados por cada alumno ao finalizar cada clase e/ou cuestionarios relativos á práctica, nos casos nos que así se esixa. A non asistencia a unha sesión de prácticas supón que será puntuada con 0 puntos. Unha asistencia a clases de practicas inferior ao 80% supón que a nota total de prácticas é de cero puntos.	10	B3 C10 D1 D2 D6 D16
Exame de preguntas obxectivas	A avaliación dos coñecementos adquiridos polo alumno farase de forma individual e sen a utilización de ningún tipo de fonte de información, mediante exames de tipo test que englobarán toda a materia impartida no cuatrimestre, tanto en teoría como en prácticas de laboratorio. Para poder aprobar a materia é necesario obter unha nota mínima do 40%, sobre a nota máxima nesta parte.	50	B3 C10 D1 D6
Resolución de problemas e/ou exercicios	Proba escrita na que se avaliará a aplicación práctica dos coñecementos teóricos á resolución de problemas tipo de máquinas eléctricas. Para poder aprobar a materia é necesario obter unha nota mínima do 40%, sobre a nota máxima nesta parte.	30	C10 D1 D2 D14 D16

Other comments on the Evaluation

Avaliación continua en primeira oportunidade

Ó longo do cuatrimestre o estudantado realizará prácticas de laboratorio e un exame, sumando entre todos unha puntuación do 60% do total. O 40% restante da materia será avaliado na data oficial fixada polo centro, nun exame de preguntas obxectivas e resolución de problemas. Para superar a materia será necesario acadar unha cualificación mínima resultante da suma de todas as actividades avaliadas, de 5 puntos, acadar un mínimo do 40% da nota máxima de cada unha das partes de cada exame(teoría e problemas) e un mínimo do 40% da nota máxima de cada unha das outras actividades avaliadas(prácticas). Se nalgunha das probas non se alcanza a nota mínima e a suma de todas as cualificacións é superior a 5 puntos, a nota que aparecerá na acta será de suspenso (4 puntos).

Avaliación continua en segunda oportunidade

Mantense a nota acadada nas prácticas de laboratorio. Realizarase un exame de preguntas obxectivas correspondente co 50% (5 puntos) da nota e un exame de problemas correspondente co 30% (3 puntos) da nota. Para superar a materia será necesario acadar unha cualificación mínima resultante da suma de todas as actividades avaliadas, de 5 puntos e acadar un mínimo do 40% da nota máxima correspondente a cada apartado (preguntas obxectivas, resolución de problemas e prácticas). Se nalgunha das probas non se alcanza a nota mínima e a suma de todas as cualificacións é superior a 5, a nota que aparecerá na acta será a de suspenso (4 puntos).

Avaliación global:

O alumnado que renuncie á avaliación continua será avaliado sobre todo o contido da materia (teoría, resolución de problemas e prácticas) que corresponderá co 100% da nota global. Para superar a materia será necesario acadar un mínimo do 40% da nota máxima correspondente a cada unha das partes (teoría, resolución de problemas e prácticas). Se nalgunha das probas non se alcanza a nota mínima e a suma de todas as cualificacións é superior a 5, a nota que aparecerá na acta será a de suspenso(4 puntos).

Compromiso ético: Espérase que o alumno presente un comportamento ético axeitado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparatos electrónicos non autorizados, e outros) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no presente curso académico será de suspenso (0.0).

Requisitos: Para matricularse nesta materia é necesario superar ou ben estar matriculado de todas as materias dos cursos inferiores ao curso no que está situada esta materia.

En caso de discrepancias, prevalecerá a versión en castelán desta guía.

IDENTIFYING DATA				
Chemical technology				
Subject	Chemical technology			
Code	V12G360V01606			
Study programme	Grado en Ingeniería en Tecnologías Industriales			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Mandatory	3rd	2nd
Teaching language	#EnglishFriendly Spanish Galician			
Department				
Coordinator	Sanroman Braga, María Ángeles			
Lecturers	Rosales Villanueva, Emilio Sanroman Braga, María Ángeles			
E-mail	sanroman@uvigo.es			
Web				
General description	In this subject, students learn the basic aspects of Chemical Engineering and the fundamentals of the basic operations most employed in industry.			
	English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
C4	CE4 Ability to understand and apply the basic knowledge of general chemistry, organic chemistry and inorganic chemistry, and their applications in engineering.
D2	CT2 Problems resolution.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D17	CT17 Working as a team.

Expected results from this subject

Expected results from this subject	Training and Learning Results		
To know the bases of chemical technology.	B3	C4	D9
To apply mass and energy balances to real systems.	B4	C4	D2 D9 D10 D17
To know and understand the basic aspects of mass transfer.	B3	C4	D9
To know the fundamentals of separation processes and their application to real cases.	B4	C4	D2 D9 D10 D17

Contents

Topic	
Introduction	Chemical Engineering. Basic principles. Chemical processes. Unit conversion and calculation tools
Mass and energy balances	Mass balances for systems without chemical reaction. Mass balances for systems with chemical reaction. Energy balances
Implementation of balances into chemical reactor design	Stoichiometry. Reaction rate. Ideal reactors
Mass transfer	Introduction. Mass transfer equations: individual and global coefficients
Distillation and rectification of liquid mixtures	Vapour-liquid equilibrium. Simple distillation. Rectification. Azeotropic and extractive distillation.

Liquid-liquid extraction	Fundamentals. Binary and ternary mixtures. Factors that affect the separation. Operation by simple contact, multiple contact in direct current, multiple contact in multiple countercurrent
Other operations in chemical processes	Gas absorption. Liquid-solid extraction. Adsorption and ion exchange.

Planning

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Lecturing	Oral and direct exhibition, by part of the professor, of the most important knowledges corresponding to the subjects of the subject in question.
Problem solving	The professor proposes to the students a series of problems so that they work on them home, before that resolve them in class or seminars. Besides along the course made diverse controls in which the students will have to resolve problems of the level of similar difficulty to the made in class
Laboratory practical	The students will make some experiences in the laboratory related with the subjects treated along the course.
Studies excursion	Visits of the students to companies of the surroundings to make an approach to the business reality and visualise the application of the theoretical contents given in the subject
Simulation	Learning and utilisation of programs of simulation applied to the contents of the subject

Personalized assistance	
Methodologies	Description
Lecturing	The students will be able to consult to the professor in any one doubts related with this methodology, as well as in the review of the different proofs of evaluation made, those that doubts have on theoretical and practical appearances linked with the subject.
Problem solving	The students will be able to consult to the professor in any one doubts related with this methodology, as well as in the review of the different proofs of evaluation made, those that doubts have on theoretical and practical appearances linked with the subject.
Laboratory practical	The students will be able to consult to the professor in any one doubts related with this methodology, as well as in the review of the different proofs of evaluation made, those that doubts have on theoretical and practical appearances linked with the subject.
Studies excursion	The students will be able to consult to the professor in any one doubts related with this methodology, as well as in the review of the different proofs of evaluation made, those that doubts have on theoretical and practical appearances linked with the subject.
Simulation	The students will be able to consult to the professor in any one doubts related with this methodology, as well as in the review of the different proofs of evaluation made, those that doubts have on theoretical and practical appearances linked with the subject.

Assessment		Qualification	Training and Learning Results		
	Description				
Studies excursion	Questions and activities related to the visit to be made will be carried out. These may take place before or after the visit.	5	B4	C4	D2 D9 D10 D17
Simulation	Realisation of diverse simulations of chemical processes that will have to deliver after the sessions of simulation that will make along the course	5	B3 B4	C4	D2 D9 D10 D17

Objective questions exam	This evaluation test includes two types of exams with objective questions: + multiple-choice questions in the lecture sessions, which will represent 5% of the total. + Short questions or multiple-choice questions that will be asked in different controls throughout the course, which will represent 20% of the total value of the exam.	25	B3 B4	C4	D2 D9 D10 D17
Problem and/or exercise solving	They will make diverse controls along the period approved by the centre, consistent in the resolution of relative problems to the contents of the matter developed in time/condition established by the professor. Each one of these activities will not surpass 40% of the final qualification of the subject.	60	B3 B4	C4	D2 D9
Report of practices, practicum and external practices	It will evaluate in this item both the realisation of the practices of laboratory like the reasoning and treatment of the results obtained in the development of the practical classes of laboratory.	5		C4	D9 D10 D17

Other comments on the Evaluation

Continuous Assessment:

Participation in any of the evaluation systems for the subject (laboratory practices, problem-solving and exercises, simulation, field study, objective questions exam) will imply the condition of being marked as present and will reflect in the records. A minimum attendance of 75% in practices, field study, and simulation is required to qualify for their evaluation. Otherwise, the grade for these evaluation systems will be 0.0. A student who is not under the "global evaluation" modality will fail if they do not achieve a MINIMUM GRADE of 4.0 points (out of 10) in each of the aforementioned tests. However, they will have the opportunity to recover the non-passed parts in the May examination. The student will pass the subject if the FINAL GRADE is ≥ 5.0 , meaning the sum of the grades obtained in the different evaluation systems of the subject is ≥ 5.00 .

Second Examination Session:

In the second examination session, students will take a final exam in which they will be evaluated on all the teaching methodologies applied throughout the subject. This grade will constitute 100% of the final grade.

Global Evaluation:

When a student requests the global evaluation, a "FINAL EXAM" will be conducted on the dates established in the school's calendar. Their grade will be the sum of 90% of the grade obtained in the "FINAL EXAM" and 10% of the practices grade.

Ethical Commitment:

Students are expected to exhibit appropriate ethical behavior. If unethical behavior is detected (e.g., cheating, plagiarism, use of unauthorized electronic devices, etc.), it will be considered that the student does not meet the necessary requirements to pass the subject. In this case, the overall grade for the current academic year will be a fail (0.0). The use of any electronic device during evaluation tests is not allowed unless expressly authorized. The introduction of an unauthorized electronic device into the examination room will be considered grounds for failing the subject in the current academic year, resulting in an overall grade of fail (0.0).

General description	A Instrumentación Electrónica é a parte da electrónica que se ocupa da medición de calquera tipo de magnitude física, da conversión da mesma a magnitudes eléctricas e do seu tratamento para proporcionar a información adecuada a un sistema de control, a un operador humano ou ambos. A instrumentación ten dous grandes temas de traballo: - O estudo dos sensores e dos seus circuítos de acondicionamento. - O estudo dos equipos de Instrumentación, que se empregan na industria para a medida de calquera tipo de variable física.

Contents

Topic	
Topic 1: Introduction to the electronic instrumentation	The electronic instrumentation in the context of the control of processes. Systems of measure and his characterisation.
Topic 2: Systems of Acquisition of Data (DAS or DAQ). Auxiliary circuits	Bridges of measure. Fixers of tension. Sources of current. Converters V/I and I/V.
Topic 3: DAS. Amplification and signals filtering	Amplifiers of instrumentation, programmable amplifiers, amplifier of isolation. Types of filters. Techniques of implementation of active filters.
Topic 4: DAS. Circuits of conversion and multiplexed	Circuits of show and retention (S&H). Conversion A/D and D/A, types and technical characteristics. Analog switches. Multiplexer analog.
Topic 5: Implementation of systems of acquisition of data	Basic structures. Criteria of election in function of the parameters of the system.
Topic 6: Physical principles of sensors	Introduction. Piezoelectricity. Magnetostriction. Piezoresistivity. Pyroelectricity. Magnetoresistance. Thermoelectricity. Thermoresistivity. Photoresistivity. Inductive sensors. Capacitive sensors. Ultrasonic sensors.
Topic 7: general Characteristics of the sensors	Technical characteristics. Types of commercial exits. Connection of sensors to electronic systems of control.
Topic 8: Proximity sensors	Inductive, capacitive, ultrasonic, optoelectronic, magnetic and safety sensors.

Topic 9: Sensors of temperature and of discharge	Sensors of Temperature: Thermocouples, sensors of infrared and integrated sensors. Sensors of discharge: Sensors of differential pressure, vortex, acceleration of *Coriolis, of turbine, electromagnetic. Criteria of selection.
Topic 10: Pressure and level sensors	Pressure sensors (Primary measuring elements: Bourdon tube, diaphragm, bellows), potentiometric, piezoelectric, capacitive, inductive, strain gauge and magnetostrictive. Level sensors: Ultrasonic, resistive, float, static pressure, differential pressure, conductivity, capacitive, inductive, optical, rotary vane and radioactive. Selection criteria.
Topic 11: Displacement sensors	Inductive sensors: LVDT, RVDT, Synchrogenerator and Resolver. Optoelectronic sensors: Absolute and incremental encoders. Applications. Selection criteria.
Topic 12: Sensors of electrical and magnetic variables	Transformer of intensity. *Shunt. Sensors of effect *Hall. Measure of magnetic fields with *Magnetoresistencias. Criteria of selection.
Topic 13: Introduction to the control of processes based in the use of microcontrollers	Introduction to the control of processes Introduction to the microcontrollers Introduction to the actuators: hydraulic, tyres and electronic (Electronics of Power)
Topic 14: Teams of electronic instrumentation	Classification, technical characteristics and connection of teams of instrumentation. Criteria of selection. Buses of instrumentation.
Topic 15: Introduction to Power Electronics (PE)	Introduction. Structure of the systems of PE. Types of converters. Semiconductors of powers. Passive components in PE. Calculation of powers.
Practice 1. Introduction to the Virtual instrumentation. LabVIEW.	The execution data flow on LabVIEW. Frontal panel and diagrams of blocks. Description of the main types of data and structures of programming.
Practice 2: Introduction to the control of processes based in the System On Chip (SOC) ESP32.	Introduction to the control of processes based in uControladores. Study of the ESP32. Introduction to the surroundings of development of the platform M5Stack. Implementation of an application of control based in the M5Stack Stick C
Practice 3: System of acquisition of data for the measure of temperature.	It will be implementing a system of acquisition of complete data for the conditioning of a sensor of temperature PT1000.
Mentored work.	- Implementation of a circuit of the measure and the control of a physical variable and his back acquisition by means of distinct hardware of capture. - Incorporate the information captures in a system of management of the information, to make tasks of control of production and control of processes.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	28	30	58
Laboratory practical	12	6	18
Problem solving	8	13	21
Mentored work	6	30	36
Essay questions exam	3	10	13
Objective questions exam	1	3	4

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	They will develop in the schedules fixed by the direction of the centre. They consist in an exhibition, by part of the professor, of the contents of the matter. Also it will proceed to show examples and technical solutions that illustrate properly the problematic to treat. The student will be able to expose all the doubts and questions that consider timely, during the session. The teacher will look for the most active possible of the student.
Laboratory practical	It will show to the student some practical settings or simulations on the matter treated that they put of self-evident the technical characteristics of the settings made, as well as the form to make measures in the same by means of sensors and the instrumentation of the laboratory.
Problem solving	The complementary activity of the magistrate's sessions in which they formulate problems and/or exercises related to the subject. The student will have to develop suitable solutions to the problems and/or exercises proposed in the classroom and of other extracted of the bibliography. They will identify possible doubts that will resolve in the classroom or in personalized tutorials.
Mentored work	This time devotes to the realisation of works of laboratory in team, related with the conditioning of sensors, visualisation of the variable measured and storage of information.

Personalized assistance

Methodologies	Description
Laboratory practical	The teacher will personally attend to the doubts and queries of the students, about the study of theoretical concepts, laboratory practices or projects. Students will have the opportunity to attend personalized tutorials or in groups in the teacher's office at the time established for that purpose at the beginning of the course and which will be published on the subject page.
Mentored work	In the practical classes and in tutorials each of the doubts that arise in the completion of the work will be solved in a personalized way.

Assessment

	Description	Qualification	Training and Learning Results
Laboratory practical	The students will make the designs and planned settings in the billed of the practice and will deliver a memory with the results of the same.	10	D9 D17
Mentored work	Once made the supervised work, the students will owe to elaborate a descriptive memory. It will fix a day for the delivery of the memory and the presentation of the work made, to the professor. This note will form part of the continuous evaluation.	30	D9 D17
Essay questions exam	In the dates indicated by the calendar of examinations of the centre, will make the final proofs that will consist in problems of development.	30	D2
Objective questions exam	In the dates indicated by centre and by means of continuous evaluation, will make proofs of short questions of test.	30	B3 C23

Other comments on the Evaluation

Long answer tests and multiple choice tests will be carried out on the dates set by the center or by the teacher and will represent 60% of the final grade. The remaining 40% will correspond to the grade obtained throughout the course, through continuous evaluation, of the laboratory practices and the supervised work. In each of these evaluations a minimum grade of 30% will be required

Students who are recognized by the management of the center for their resignation from continuous assessment, must attend the final test. This will represent 60% of the grade, the remaining 40% will be obtained through a practical exam and the completion of a work. In this case, the practical exam and the work will be compulsory, and in these tests a minimum grade of 50% must be obtained.

In the second call, the same procedure will be followed.

The practice note will only be saved for one academic year.

Ethical commitment:

The student is expected to exhibit appropriate ethical behavior. In the case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, and others) it will be considered that the student does not meet the necessary requirements to pass the subject. In this case, the overall grade in the current academic year will be a failure (0.0).

The use of any electronic device will not be allowed during the evaluation tests unless expressly authorized. The fact of introducing an unauthorized electronic device in the exam room will be considered a reason for not passing this subject in this academic year and the overall grade will be failed (0.0).

THE ACQUISITION OF SKILLS AND ITS INFLUENCE ON THE EVALUATION

In this subject there is no competency assessment approach. Next, it is specified how the different teaching activities exercise the student in the different competencies and how their acquisition conditions the final grade obtained by the student.

CG3. Knowledge of basic and technological subjects, which enables them to learn new methods and theories and gives them the versatility to adapt to new situations.

The acquisition of this competence is guaranteed (in the scope of the subject) by its own contents. The self-assessment activities, the practicals and the different assessment tests deal with these content of a technological nature.

CT2. Problem resolution.

Students exercise in this competence through the proposed activities: problem sets and theoretical resolution of the assemblies proposed in the practice statements. The acquisition of competence in the field of the subject is justified by the fact that the assessment tests (thematic blocks and individual tests) consist almost entirely of problem solving.

This competence is achieved and evaluated in the proposed laboratory work. These are carried out in groups of two and at the end of them, each group must submit a written report of the activities carried out. The students who prepare the best works must make an oral presentation.

CT9. Apply knowledge.

The students exercise this competence, especially in the laboratory sessions, where they have to transfer to the simulations and to the assembly and real measurements what was studied in the theoretical sessions. The laboratory sessions are evaluated one by one, averaging the final grade as long as there is minimal attendance and use.

CT17 Teamwork.

The students exercise this competence in the laboratory sessions, since these sessions are carried out in teams of two. Collaboration between both students is necessary to successfully carry out the setups, measurements and data collection required in each experiment. The practice teacher verifies that the prior preparation and development of each of the sessions is the result of the collaboration of the two members of each group. In case of detecting anomalies in this sense, the qualifications of each member of the group are penalized and individualized.

General description	This matter has like vision and like mission approach to the students to his back professional life through the knowledge, handle and application of methodologies, technical and tools oriented to the preparation, organisation and management of projects and other technical documents. It employed a practical approach of the subjects, looking for the integration of the knowledges purchased to the long of the career of face to his application to the development of the methodology, organisation and management of technical works, as true essence of the profession of engineer in the frame of his attributions and fields of activity. It will promote the development of the competitions of the matter by means of a theoretical approximation-practical, in which the exposed contents of theoretical way develop by means of the realisation of practical activities and works of application oriented to the industrial reality of the profession, assimilating the agile and precise employment of the distinct rule of application and of the best practices established. Given the variety that produces in the spectrum of professional exits, the academic program possesses a part of general contents to all the Industrial Engineers, in which it treats to transmit those appearances that reinforce the *pluridisciplinaridad and possesses another more specific part of the speciality, that does reference to methodological or normative appearances of this field. Likewise the strategy employed allows to expose to the students the professional alternatives that open him , from the free professional exercise (**peritaciones, *dictámenes, reports, projects, etc.), even his immersion in a small / average technical office more oriented the installations or even to the design of product.			

Training and Learning Results

Code	
B1	CG1 Ability to design, develop, implement, manage and improve products and processes in various industrial fields, through analytical, computational and experimental appropriate techniques.
B2	CG2 Ability to lead activities related to CG1 competence.

Methodologies

	Description
Introductory activities	It presented the matter, information of the contents of the same, methodologies that go to apply, works to make in the subject and form of evaluation. Likewise they made dynamic in the class to boost the interrelationship in the students.
Lecturing	Exhibition by part of the professor of the contents on the matter object of study, theoretical bases and/or guidelines of a work, exercise or project to develop by the student.
Mentored work	Elaborate a relative technical report the any question related with the Industrial Engineering, with the quality and the rigour that expects of an Industrial Engineer.

Project based learning	It will make a work applying the methodology of "Learning Based in Projects- **ABP". Realisation of a project of engineering, working with an open team. It will do upsetting in the application of tools and knowledges of industrial engineering to create solutions of engineering for the real needs of an industry. They make reflections of ethical and social character on different appearances of the works made (consequences of the industrial fires, labour security, management of waste, among others) These appearances collect in the *rubrica of evaluation.
Problem solving	The student has to develop the ideal or correct solutions the the exercises posed that they base in the theory given. They made applying formulas, algorithms or procedures of transformation gives available information. It will be necessary the interpretation of the results.
Practices through ICT	Activities of application of the knowledges in a determinate context, and of acquisition of basic skills and *procedimentales in relation with the matter, through the TIC.
Design Thinking	It created a group *interdisciplinar with students of other subjects and degrees. This group, applying the methodology "**Design *Thinking" aroused a work of implantation and/or improvement on a concrete activity.
Scientific events	To present the ideas developed by the students in the groups *colaborativos organises a presentation in format congress. This will be public and with diffusion in different media.
Presentation	Like alternative to the application of the "**Design *Thinking and the scientific events", the *profesorado, will be able to propose the presentation of the project made in "the learning based in projects".

Personalized assistance

Methodologies	Description
Project based learning	The student made a project of engineering, working with an open team. It will do upsetting in the application of tools and knowledges of industrial engineering to create solutions of engineering for the real needs of an industry. They will do *tutorías of group with the professor to clear doubts and for the follow-up of the work.
Mentored work	The student, of individual way, elaborates a technical report, or similar document, on a subject proposed by the professor. The *tutorías will be individual. They cleared the doubts of the student and helped him in the organisation and planning of the work. Can make *tutorías in small group, gathering to students with the even problem, for a better efficiency.
Design Thinking	The students, in multidisciplinary group with students of other degrees, made a consistent work in posing a solution to a problem posed. It will do applying the methodology *Design *Thinking and applying, simultaneously, the methodology Learning like Service. They are scheduled meetings for explanation of the methodologies to apply and *tutorías of group for the follow-up of the works.
Scientific events	It will work with the different groups of students to help them to prepare the public exhibition of his work. It made several essays with them and oriented them to achieve an effective presentation.

Assessment

	Description	Qualification	Training and Learning Results
Lecturing	Theory: The proofs will be of type test or of brief answer. Minimum note of this part: 5 on a qualification of 10 (in this part)	15-35	B1 D2 B2 D9
Mentored work	Elaborate a relative technical report the any question related with the Industrial Engineering, with the quality and the rigour that expects of an Industrial Engineer. It published a *rúbrica of evaluation in the platform *MOOVI of the subject.	15	B1 D1 D3 D5 D6 D7 D8 D9 D10 D15 D16
Project based learning	Realisation of a project of engineering, working with an open team. It will do upsetting in the application of tools and knowledges of industrial engineering to create solutions of engineering for the real needs of an industry. It published a *rúbrica of evaluation in the platform *MOOVI of the subject. The evaluation includes an individual proof on the work and *ponderara the note of the project as it will expose in the *rubrica of evaluation.	35-40	B1 C18 D2 B2 D3 D5 D7 D8 D9 D10 D14 D17 D20

Scientific events	Presentation of the ideas developed by the students in the groups *colaborativos. This activity will be public and with diffusion in different media. It published a *rúbrica of evaluation in the platform *MOOVI of the subject.	0-25	D1 D3 D5 D6 D17 D20
Presentation	Presentation of group of class of the work made, well with the methodology of "*Design *Thiking", well the project developed in the methodology of "learning based in projects". The criterion establishes it the *profesorado of the group.	5-15	D2 D5 D6 D7 D17 D20

Other comments on the Evaluation

EVALUATION SYSTEM:

The default evaluation system is the continuous evaluation system. Students who wish to use the non-continuous assessment system (global assessment) must officially request it, within the period and in the manner established by the management of the E.E.I. If the student does not request this waiver or does not obtain the favourable verdict of the waiver of continuous assessment, it is understood that he/she is in the continuous assessment system.

The evaluation will be carried out according to the criteria indicated by the teacher of the subject in the first class and which will be published on the MOOVI platform of the subject.

Attendance (and participation) in at least 80% of the practical classes is MANDATORY. CRITERIA FOR PASSING THE SUBJECT THROUGH CONTINUOUS ASSESSMENT:

In order to assess the subject through continuous assessment, a series of evaluable activities will be established in the first class of the course. Failure to pass any of these activities with a minimum mark of 5 means a failure and the need to take a global evaluation exam of the subject.

In order to pass the course through continuous assessment, two conditions must be met simultaneously:

- a) obtain a minimum score of 5 out of 10 in each of the evaluable sections or parts indicated in the rubrics published.
- b) obtain an average mark, weighted according to the percentages indicated above, of at least 5 out of 10.

The percentage that each of the sections represents in the grade for the subject is indicated in the following table:

Activity project 35%-40%
Technical report 15%
Theoretical tests: 15%-35%
Communication skills: 20%-30%

According to the characteristics of the group and at the teacher's discretion, 2 possible ways of assessing communication skills are established:

A) Presentation of the project carried out during the course, which may include: Summary of the work, type A- of the TFG, Summary of the project of between 250 and 300 words, visual support for the presentation (slides, models, etc.) and oral presentation.

B) Carrying out a collaborative work, with other degrees, and presentation of the same, which may include: Executive report of the work carried out using Design Thinking methodology, congress-type summary of between 250 and 300 words, visual support for the presentation (slides, models, etc.) and oral presentation. In this case (**option B**) the following events are established, **MANDATORY**, on the following dates (in the morning): **1st term groups:**

Initial meeting on **Friday 12 September** (Campus auditorium) Congress: **Friday 28 November** (Campus auditorium) 2nd term groups:

Initial meeting on **Friday 30 January** Congress: **27 March** CRITERIA FOR PASSING THE COURSE THROUGH GLOBAL ASSESSMENT: Students who choose to apply for global assessment will take an exam equivalent to the contents and competences of with the following structure:

1. Theoretical contents. 40%
 2. Practical contents: 40%
 3. Communication skills and communication of results 20%
- ETHICAL COMMITMENT:**

Students are expected to show appropriate ethical behaviour. By taking the course, students acquire a commitment to teamwork, collaboration and respect for classmates and teachers. In the case of detecting unethical behaviour (copying, plagiarism, use of unauthorised electronic devices and others) it will be considered that the student does not meet the necessary requirements to pass the course.

Other comments

They require basic knowledges of computing, of systems of representation, normalisation of Drawing, industrial normalisation and of construction.

For the acquisition of the planned competitions in this matter recommends the assistance and active participation in all the activities programmed and the use of the *tutorías, especially those referents to the review of the works.

The key point to surpass the subject successfully, is [to comprise] the matter and no so much his [memorisation]. In case of doubts or questions, the student has to ask to the professor well in class, in the schedule of attention to the student or *telemáticamente.

Like general rule a doubt resolved avoids five *interrogantes in the future.

It recommends to the students the assistance to the *tutorías for the exhibition of doubts.

It recommends the active participation in the mechanisms of *tutorización.

Finally, and regarding the assistance, although they fix some minima in theory and practical, recommends to the students the assistance to the whole of the theoretical and practical days of the subject.

Didactic materials

=====

requires access to Internet and the tools *ofimáticas usual.

The documentation will be facilitated through the platform *MooVi and will be expanded and commented in the face-to-face

classes and rest of face-to-face activities.

General description	Subject that belongs to the Block of Common Subjects of the Industrial Technologies. It is part of the curricula of all Degrees of Industrial Engineering.			
	This subject provides an approach to Environmental Engineering, which is necessary to develop any engineering project. In it we work areas of Chemistry and Process Engineering, in order to study the pollutants behaviour and their effect on the environment and organisms, to design physical-chemical processes to mitigate pollution, as well as to evaluate the environmental impact of the industrial wastes. The subject's objective is to know, understand, and know how to apply the techniques used, on an industrial scale, in fields such as solid wastes treatment and management, wastewater treatment, soil remediation, treatment of polluting gas industrial emissions, and pollution prevention. Subject of the "English Friendly" program. International students may request the teacher Claudio Cameselle Fernandez: a) Materials and bibliographic references for the follow-up of the subject in English. b) Attend tutorials in English. c) Tests and evaluations in English.

Topic	
Lesson 1: Introduction to the environmental technology.	1. Material cycle economy. 2. Introduction to the best available techniques (BAT).
Lesson 2: Management of waste and effluents.	1. Urban waste management. 2. Industrial waste management. Industrial waste treatment facilities. 3. Regulations.
Lesson 3: Treatment of urban and industrial wastes.	1. Valorization. 2. Physico-chemical treatment. 3. Biological treatment. 4. Thermal treatment. 5. Landfilling.
Lesson 4: Treatment of industrial and municipal wastewaters.	1. Characteristics of municipal and industrial wastewaters. 2. Wastewater treatment plant. 3. Sludge treatment. 4. Water treatment and reuse 5. Regulations
Lesson 5: Atmospheric pollution.	1. Types and origin of atmospheric pollutants. 2. Dispersion of pollutants in the atmosphere. 3. Effects of the atmospheric pollution. 4. Treatment of polluting gas emissions. 5. Regulations
Lesson 6: Sustainability and environmental impact assessment	1. Sustainable development 2. Life cycle analysis and economy. 3. Ecological footprint and carbon footprint. 4. Introduction to the environmental impact assessment
Practice 1: Codification of wastes	
Practice 2: Preparation of immobilized activated charcoal for use as an adsorbent.	
Practice 3: Contaminants removal by adsorption with immobilized activated charcoal.	
Practice 4: Coagulation-flocculation: Establishment of optimal working conditions.	
Practice 5: Simulation of certain stages of a EDAR	
Practice 6: Life Cycle Analysis of a product.	

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	26	52	78
Problem solving	11	22	33
Laboratory practical	12	12	24
Report of practices, practicum and external practices	0	6	6

Case studies	0	6	6
Objective questions exam	1.5	0	1.5
Problem and/or exercise solving	1.5	0	1.5

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Teaching in the classroom of the key concepts and procedures for learning the syllabus contents.
Problem solving	Solving exercises with the teacher's help and independently.
Laboratory practical	Application of the knowledge acquired to the resolution of problems of environmental technology, using equipment and facilities available in the laboratory/computer room.

Personalized assistance	
Methodologies	Description
Laboratory practical	In tutorials, students can consult with their teacher any questions about laboratory practices or the report of practices to be done. The tutoring schedule of the teaching staff will be public and accessible to the students.
Lecturing	In tutorials, students can consult with their teacher any questions arising in the lectures and related to the contents seen in them. The schedule of tutorials of teachers will be public and accessible to students.
Problem solving	In tutorials, students can consult their teacher any questions about the resolution of problems raised in the classroom. The tutoring schedule of the teaching staff will be public and accessible to the students.

Assessment			
	Description	Qualification	Training and Learning Results
Report of practices, practicum and external practices	Detailed report for each practices that includes an explanation of the experimental work, as well as the results obtained, their analysis and the conclusions drawn from them. The laboratory practices are in teams of 2 students, but the teacher may require the report to be submitted individually. A report submitted by a student who did not previously do the practical in the laboratory will not be evaluated under any circumstances. In the computer classroom practices, each student will work individually and, consequently, the reports will also be individual. Similarly, only the report handed by a student who has previously attended the corresponding practical session will be assessed. The competences: CG7, CE16, CT1, CT3, CT9 and CT10, are assessed based on the quality of the written report elaborated by each student on his/her own. The following points will be evaluated in the report: text style and correctness, structure and presentation, analysis and discussion of the results, and conclusions. Competences CT12 and CT17 will be assessed based on the laboratory work. Lab practices will be carried out in pairs, and it is expected the student develop research skills in the field of environmental technology.	10	B7 C16 D1 D3 D9 D10 D12 D17

Case studies	All exercises, seminars, supervised work that may involve learning and service, practical cases and theoretical / practical tests that are made and delivered to the teacher throughout the course, related to the concepts and contents of the syllabus.	30	B7 C16 D2 D3 D10 D12
	Throughout a four-month time several tests are performed.		
	Competences CG7 and CE16 will be assessed considering the students' answers to the theoretical questions.		
	Competences CT2, CT10 and CT12 will be assessed considering the students' answers to the exercises.		
	Competence CT3 will be assessed base on the two parts of the exam: theory and exercises; considering the precision and clarity of the answers.		
Objective questions exam	Written tests in which students must answer various theoretical questions related to the subject syllabus.	30	B7 C16 D1 D3 D10 D19
	In the semester, two tests will be carried out: one at midterm (T-1) and the other at the end of the course (T-2), both scheduled on dates set by the institution.		
	Both tests will be multiple-choice exams, and in each, students will answer several multiple-choice questions.		
	Each test (T-1 and T-2) will be graded on a scale of 10 points and will represent 50% of the total score for this item		
	CG7, CE16 and CT19 competences will be assessed in this test, based on student responses to the questions.		
	CT1, CT3 and CT10 competences are also evaluated, since the test is written and requires students' analysis and synthesis skills.		
Problem and/or exercise solving	Written exams that consist of solving several problems related to the subject syllabus.	30	D1 D2 D3 D9 D10 D19
	Two exams will be given during the semester—one (P-1) at the midpoint and the other (P-2) at the end of the course—and both will take place on the dates set by the institution.		
	In each exam, students must solve various problems related to the topics covered in the sections subject to evaluation.		
	Each exam (P-1 and P-2) will be graded on a scale of 10 points, and will represent 50% of the total score for this item.		
	CT2, CT9 and CT19 competences will be assessed in this proof, based on the resolution of various exercises of environmental technology, which require the use of applied knowledge related to the contents of the subject.		
	CT1, CT3 and CT10 competences are also evaluated, since the test is written and requires students' analysis and synthesis skills.		

Other comments on the Evaluation

Evaluation

FIRST CALL

1. Continuous Assessment Modality

A student is considered to be following the "continuous assessment modality" as long as they have not officially renounced this evaluation format—that is, provided they did not officially request a change to the "global assessment modality" within the deadlines set by the E.E.I. management.

The final grade of students under the "continuous assessment modality" will be based on the following criteria:

a) Mandatory completion of all scheduled tests under "Objective Question Exam" (T-1 and T-2) and "Problem and/or Exercise solving" (P-1 and P-2)":

- Each test will be graded on a 10-point scale, and a minimum of 5 points is required to pass.
- A student will not pass the subject if they score less than 4 points on any of the tests (T-1, T-2, P-1 or P-2).

b) **Mandatory completion of "Laboratory Practices"** and submission of the corresponding reports:

- Practices are graded on a 10-point scale, and a minimum of 5 points is required to pass.
- Students will not pass if they score less than 4 points.
- In addition, students may not be unjustifiably absent from more than one lab practice. If they miss more than one, they must take an exam covering the missed practices

c) **Students meeting the conditions in (a) and (b) will pass the subject if the weighted sum of all evaluation scores in this guide is ≥ 5 points.**

Regarding the "Objective Question Exam" and "Problem and/or exercise solving" tests:

- **T-1** and **P-1** will be held on the same day, mid-semester, on a date set by the E.E.I. Students will answer theoretical questions and solve problems based on the first three topics of the course syllabus.
- If a student scores under 4 points in either T-1 or P-1, but passes the other, they must retake only the failed part in the July extraordinary call.
- **T-2** and **P-2** will take place on the same day at the end of the semester, according to the E.E.I. schedule for final exams. These tests will cover the last three topics of the syllabus.
- If a student scores under 4 points in either T-2 or P-2 but passes the other, they will also only need to repeat the failed part in the July extraordinary call.

2. Global Assessment Modality

Students granted a change to the "global assessment modality" by the E.E.I. will take a final exam covering theory and problem-solving (Objective Question Exam + Problem and/or Exercise solving), which will count for 90% of the final grade. A practical exam will account for the remaining 10%. In all cases, students must score at least 50% of the maximum score in each part - i.e., theory, problem-solving, and practices- in order to pass the subject.

SECOND or EXTRAORDINARY CALL

The same evaluation criteria will apply.

Regarding the July exam, the grades for "case studies" and "Report of Practices" will be retained, as long as the required minimum grade was achieved in the first call.

If a student passed any test in the first call (T-1, T-2, P-1 or P-2) with a score ≥ 5 , they will only need to retake the failed tests in July

Ethical commitment:

The student is expected to present an adequate ethical behavior. If you detect unethical behavior (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case the final grade, in the current academic year, will FAIL (0.0 points).

The use of electronic devices during the assessment tests will be allowed. The fact of introducing into the examination room an unauthorized electronic device, will be reason not pass the course in the current academic year, and the final grade will FAIL (0.0 points)

General description	Nesta materia preténdese que o estudante adquira os coñecementos esenciais que lle permitan comprender o funcionamento das máquinas térmicas e os procesos que teñen lugar no seu interior, así como que coñeza os tipos de máquinas e instalacións máis importantes e os seus compoñentes. Os contidos enfócanse tanto a aspectos de eficiencia enerxética como a aspectos ambientais e sociais. Estes aplícanse a sistemas que empregan ciclos térmicos: ciclos de potencia (gas e vapor) e en ciclos de refrixeración e bomba de calor, así como o emprego de distintos combustibles renovables.

Other comments on the Evaluation

Avaliación continua □ Primeira oportunidade

Durante o cuadrimestre realizaranse tres probas parciais escritas que abrangerán os contidos vistos ata a data de realización da proba. As probas terán lugar durante o período lectivo do cuadrimestre, coa salvidade da última que poderá realizarse na data e aula do exame oficial por motivos de calendario. Os contidos avaliados en cada proba non serán obxecto de avaliación nas seguintes, pero o seu emprego si pode ser necesario.

Cada unha das probas terá un valor comprendido entre o 20% e o 40% da nota da materia, dependendo do temario que abraza. Para poder superar a materia, o alumnado deberá obter en cada unha das probas unha cualificación igual ou

superior ao 30%.

A nota final calcularase como a suma das notas. No caso de que a cualificación nalgunha proba sexa inferior ao 30% e a puntuación total da asignatura sexa superior a 4, a nota final será de 4.

Avaliación continua □ Segunda oportunidade

O exame de segunda oportunidade (E2) constará dunha proba escrita do 100% que abranguerá os contidos teóricos e exercicios da materia.

Aquel alumno que solicite, de forma oficial na escola, a renuncia á avaliación continua terá dereito a unha proba global (EG), escrita, con puntuación sobre o 100%, na que se avaliarán os contidos teóricos e resolución de problemas vistos ao longo da materia.

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considérase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no actual curso académico será de suspenso (0.0). Non se permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado na aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0.0).

Other comments on the Evaluation

To surpass the subject, it is necessary to obtain a mark upper or the same to 50% and that any of the four parts was evaluated underneath of the 30 % of the maximum mark of each part. In the case that a student do not reach the minimum in any of the parts, his/her final mark would be fail (4.0). The students that renounce to his/her continuous assessment, will have the opportunity to pass the subject in a final exam, with the same parts and with the same weights as for the rest of students. The evaluations of each one of the parts will be kept along the same academic course, but this will not be true for the following ones. Ethics commitment: it is expected that the student has a suitable behaviour. In the case a non-proper behaviour is detected (copy, plagiarism, unauthorised use of electronic devices, and others) it would be considered that the student will not have the necessary requirements to surpass the subject. In this case, the mark in the current course will be a fail (0.0).

General description	Nesta materia preséntanse os conceptos básicos do control dixital en sistemas industriais así como as técnicas de análises, deseño e integración de proxectos de automatización.			

Resultados de Formación e Aprendizaxe	
Code	
B3	CG3 Coñecemento en materias básicas e tecnolóxicas, que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacións.
C24	CE24 Coñecementos de regulación automática e técnicas de control, e a súa aplicación á automatización industrial.
D9	CT9 Aplicar coñecementos.
D16	CT16 Razoamento crítico.
D17	CT17 Traballo en equipo.

Resultados previstos na materia		
Expected results from this subject	Training and Learning Results	
Coñecementos xerais sobre o control dixital de sistemas dinámicos, das principais ferramentas de simulación de sistemas *muestreados	B3	
Capacidade para deseñar sistemas de regulación e control dixital.	C24	D9
Habilidade para a concibir, desenvolver e *modelar sistemas automáticos.	C24	D9 D16
Capacidade de analizar as necesidades dun proxecto de automatización e fixar as súas especificacións.		D9 D16 D17
Capacidade de *dimensionar e seleccionar un autómatas *programable industrial para unha aplicación específica de automatización así como determinar o tipo e características dos sensores e *actuadores necesarios.	C24	D9 D16
Capacidade de traducir un modelo de funcionamento a un programa de autómatas.	C24	D9
Ser capaz de integrar distintas tecnoloxías (electrónicas, eléctricas, *neumáticas, etc.) nunha única automatización.	C24	D9 D17

Contidos	
Topic	
TEMA 1.- Autómatas Programables Industriais (PLCs).	1.1 Principio de funcionamento. 1.2 Memoria de Entradas e Memoria de Saídas. 1.3 Ciclo de funcionamento do autómatas. Tempo de ciclo. 1.4 Programación estruturada. Tipos de módulos de programa.
TEMA 2.- Linguaxes normalizadas para a programación de autómatas.	2.1 Programación de autómatas co Standard IEC 61131. 2.2 Tipos de Datos Numéricos. Limitacións. Conversión. 2.3 Programación avanzada en Diagrama de Funcións e Diagrama de Contactos. Ampliación do conxunto de instrucións coñecidas.
TEMA 3.- Supervisión e Control de Procesos Industriais.	3.1 Tratamento de sinais analóxicos de E/S no autómatas. 3.2 Modelado de sistemas de supervisión e/ou control. 3.3 Do modelo funcional ao programa de autómatas. 3.4 Integración de Tecnoloxías.

TEMA 4.- Sistemas de control dixital.	4.1 Esquemas de control por computador. 4.2 Secuencias e sistemas discretos. 4.3 Transformada Z. 4.4 Función de transferencia en Z. 4.5 Ecuacións en diferenzas.
TEMA 5.- Análise de sistemas muestreados de control.	5.1 Mostraxe. 5.2 Reconstrución. 5.3 Sistemas muestreados. 5.4 Estabilidade. 5.5 Análise de resposta transitoria. 5.6 Análise de resposta permanente.
TEMA 6.- Síntese de reguladores dixitais.	6.1 Discretización de reguladores continuos. 6.2 Reguladores PID discretos.
P1. Tia Portal para supervisión e control de procesos.	Repaso e ampliación do programa Tia Portal para a supervisión e control de procesos.
P2. Supervisión de Procesos con sinais analóxicos.	Modelado e implantación da Supervisión dun proceso sinxelo que teña varios sinais analóxicos de entrada.
P3. Supervisión de Procesos con sinais analóxicos.	Modelado e implantación da Supervisión dun proceso máis complexo con varios sinais analóxicos de entrada, distintas zonas de traballo e alarmas.
P4. Supervisión e Control de Procesos con sinais analóxicos.	Modelado e implantación da Supervisión e Control de procesos no que estean implicadas sinais analóxicos, tanto de entrada como de saída coas súas Leis de Control.
P5. Matlab e Simulink para Sistemas Discretos.	Repaso e ampliación do programa Matlab e Simulink para a análise e deseño de sistemas de control.
P6. Introducción aos Sistemas Dixitais.	Procedementos de Mostraxe e Reconstrución. Influencia do período de mostraxe.
P7. Análise Dinámica de Sistemas Dixitais.	Obtención da resposta temporal dun sistema discreto. Implantación de Ecuacións en Diferenzas para a simulación de sistemas.
P8. Síntese de Reguladores Discretos.	Discretización de reguladores continuos: comparación dos diversos métodos de discretización. Implantación dun PID discreto.

Planificación

	Class hours	Hours outside the classroom	Total hours
Actividades introductorias	1	0	1
Lección maxistral	22	22	44
Resolución de problemas	10	20	30
Prácticas de laboratorio	18	27	45
Exame de preguntas de desenvolvemento	4	26	30

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

	Description
Actividades introductorias	Presentación de a materia a os alumnos: competencias, contidos, planificación, metodoloxía, atención personalizada, avaliación e bibliografía.
Lección maxistral	Desenvolveranse en os horarios fixados por a Escola. Consistirá en unha exposición e desenvolvemento por parte de o profesor de os temas que constitúen o contido de a materia. Durante o seu desenvolvemento alentarase a participación activa de o alumno. Será necesario que logo o alumno dedique un tempo aproximadamente igual a a duración de a sesión para asimilar e sentar os conceptos explicados e que lle servirá como preparación para a seguinte sesión.
Resolución de problemas	Durante as sesións de aula, cando resulte oportuno, procederase a a resolución de problemas e/ou exercicios que faciliten a comprensión de os contidos de a materia, ou que sirvan para desenvolver e aplicar os contidos apresetados. O alumnado deberá resolver exercicios similares para adquirir as capacidades necesarias.
Prácticas de laboratorio	Actividades de aplicación de os coñecementos adquiridos en as clases de teoría e situacións concretas que poidan ser desenvolvidas/simuladas en o laboratorio de a asignatura.

Atención personalizada

Methodologies	Description
Lección maxistral	En as clases de aula en que se imparta teoría se fomentara a participación de o alumnado, podendo interromper a exposición si algún punto non quedou suficientemente claro.
Resolución de problemas	En as clases de aula en as que se resolvan exercicios se fomentara especialmente a participación de o alumnado, cando non comprenda algún paso, ou suxerindo melloras e solucións alternativas.

Prácticas de laboratorio	En as clases de laboratorio farase un seguimento máis próximo de os grupos de prácticas, axudando a os que vaian un pouco máis lentos e suscitando novos retos ou melloras en o seu desenvolvemento a os máis avantaxados.
Actividades introductorias	A primeira clase de a asignatura ten moita importancia, e debe ser o suficientemente aclaratoria e reveladora para o alumnado de o que vai aprender en a asignatura e a onde se pretende chegar ao final de a mesma.
Tests	Description
Exame de preguntas de desenvolvemento	Aquí os alumnos deberán demostrar os coñecementos adquiridos en a asignatura, resolvendo basicamente exercicios de o tipo que se desenvolveron en o aula e que eles mesmos implantaron en o laboratorio. Insistirase en a importancia de a solución correcta, pero tamén en a xustificación de o proceso de chegar a a mesma.

Avaliación				
	Description	Qualification	Training and Learning Results	
Prácticas de laboratorio	Valorarase cada práctica de laboratorio entre 0 e 10 puntos, en función do cumprimento dos obxectivos fixados no enunciado da mesma e da preparación previa e actitude do alumnado. Cada práctica terá unha *ponderación distinta sobre a nota final de prácticas. Así mesmo, controlarase e valorará o aproveitamento das prácticas por parte do alumnado. Nalgunha das prácticas poderase esixir a entrega dos resultados da mesma.	30	B3 C24	D9 D16 D17
Exame de preguntas de desenvolvemento	Exame final dos contidos da materia, que incluírá cuestións teóricas, problemas e exercicios.	70	B3 C24	D9 D16

Other comments on the Evaluation

EXAMENES: 70%

- Dúas probas escritas, a de avaliación continua e o exame final, de 35% de peso cada unha.
- Nota mínima para aprobar cada parte: 5 puntos (sobre 10 puntos).
- O exame de avaliación continua tratará sobre os temas da parte de automatización.
- O exame final tratará sobre os temas da parte de control dixital.

PRÁCTICAS: 30%

- A asistencia a todas as sesións de prácticas é Obrigatoria, excepto para os alumnos cuxa renuncia á Evaluación Continua sexa oficialmente admitida.
- A nota mínima de prácticas é de 3.3 puntos (sobre 10 puntos)
- Se realizará unha Evaluación Continua do traballo do alumnado nas sesións de prácticas ao longo do cuadrimestre. Si un/a alumno/a non prepara adecuadamente as prácticas e/ou descoñece os coñecementos básicos explicados en clase para a realización da mesma, obtendrá directamente a cualificación de suspenso coa mínima nota en dita práctica.
- Si ao longo das sesións de prácticas reglamentadas o traballo do alumno é insuficiente e non consegue o Aprobado en prácticas, terá as prácticas Suspensas para a 1ª convocatoria.
- Si supera o exame escrito na 2ª oportunidade, o alumno deberá examinarse de prácticas si non as ten aprobadas da 1ª oportunidade.
- Tamén deberá examinarse de prácticas, na mesma convocatoria en que superen o exame escrito, os alumnos cuxa renuncia a Evaluación Continua sexa oficialmente admitida.

AVALIACIÓN SEGUNDA OPORTUNIDADE

- Unha única proba escrita sobre todos os contidos vistos durante o curso.
- Se o alumno aproba algunha parte (Automatización ou Control) en 1ª oportunidade se garda para 2ª oportunidade.

CUALIFICACIÓN:

- Para a consideración de "Presentados" ou "Non presentados" a unha convocatoria, se terá unicamente en conta a

participación nas probas escritas.

- Nas probas escritas poderase establecer unha puntuación mínima nun conxunto de preguntas/exercicios para superar o mesmo. Para aprobar a materia débense superar ambas as partes, tanto o programa de prácticas (obtendo como mínimo o 33% da puntuación asignada ás prácticas) como as probas escritas (obtendo como mínimo o 50% da puntuación asignada), obteníndose en principio a nota total segundo a porcentaxe 30%-70% indicado anteriormente.

- No caso dos Suspensos por non alcanzar algún dos mínimos establecidos ou non aprobar os exámenes escritos ou as prácticas, a nota final que figurará na acta será a mínima entre 4.5 e a media obtida de tal forma que nunca poderá superar os 4.5 puntos.

- Se poderían expor actividades adicionais, de carácter voluntario, que complementen a cualificación calculada en base aos criterios expresados anteriormente.

Compromiso ético:

Espérase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (por exemplo copia ou plaxio, utilización de aparellos electrónicos non autorizados, e outros), considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Ademais, solicitarase a aplicación do Regulamento Disciplinario da Escola para o alumno/a en cuestión.

1. AVALIACIÓN CONTINUA

A cualificación final no sistema de avaliación continua determinarase a través das seguintes probas e actividades:

- **Proba 1.** Este exame será tipo test, realizarase ao concluír o Tema 3, terá un carácter liberatorio e suporá o **20%** da cualificación final da materia.
- **Proba 2.** Esta proba tamén será tipo test, realizarase ao concluír o período formativo vencellado á materia e suporá o **30%** da cualificación final da mesma.
- **Proba 3.** Este exame consistirá no desenvolvemento de varios problemas, realizarase na data establecida polo Centro para o exame final na convocatoria ordinaria e suporá o **30%** da cualificación final da materia.
- **Prácticas.** O cumprimento das tarefas desenvolvidas durante as prácticas suporá o **20%** da cualificación final da materia.

2. AVALIACIÓN GLOBAL

Para os estudantes que opten por este sistema de avaliación, a cualificación final da materia será a obtida nun exame global que realizarase na data establecida polo Centro na planificación académica. Este exame dará a posibilidade de obter o 100% da cualificación e constará de dúas partes:

- A primeira parte constituirá o 40% da nota final e tratarase dunha proba tipo test que abarcará todos os contidos teóricos e prácticos desenvolvidos ao longo do período formativo vencellado á materia. Unha condición necesaria, aínda que non suficiente, para superar a materia, será obter nesta parte unha puntuación mínima de 5, nunha escala do 0 a 10.
- A segunda parte completará o 60% restante e constará de varios problemas a desenvolver.

3. CONVOCATORIA EXTRAORDINARIA DE XULLO (SEGUNDA OPORTUNIDADE)

Nesta convocatoria, a cualificación será a obtida nun exame global das mesmas características que o da convocatoria ordinaria.

4. COMPROMISO ÉTICO

Esperase que os estudantes actúen de forma ética e honesta en todas as probas e actividades que se desenvolvan ao longo do período formativo.

No caso de detectar unha actuación fraudulenta nas actividades e probas de avaliación (copia, utilización non autorizada de apuntamentos, libros, materiais, dispositivos electrónicos, medios telemáticos e outros) considerarase que o estudante non reúne os requisitos necesarios para superar a materia. Dito comportamento implicará a cualificación de cero (suspense) na acta da convocatoria correspondente.

General description	(*)La asignatura ofrece una visión introductoria y esencial sobre la electrificación del transporte, destacando tanto la evolución de los vehículos de combustión hacia sistemas electrificados como el papel central que desempeñan los vehículos híbridos y eléctricos en la actual transición energética. Este cambio tecnológico genera nuevas oportunidades para la industria de componentes eléctricos y sectores asociados, como la electrónica, las comunicaciones y la digitalización, y sitúa al vehículo eléctrico en el centro del debate social sobre sostenibilidad, eficiencia energética y modelos económicos. La asignatura invita a reflexionar sobre estos desafíos, proporcionando al alumnado las bases conceptuales necesarias para comprender su impacto y potencial en los ámbitos industrial y tecnológico, estimulándolo a desempeñar un papel activo en este proceso de cambio.

Other comments on the Evaluation

El alumno/a podrá escoger entre una de las dos opciones, Opción A (Evaluación Final) o Opción B (Evaluación continua), para su evaluación, según se detalla a continuación. Opción A A esta Opción A podrá optar cualquier alumno/a matriculado/a en la asignatura. La evaluación de los conocimientos adquiridos por el alumno/a se hará de forma individual, y sin la utilización de ningún tipo de fuente de información, en un único examen escrito que englobará toda la materia recogida en el Temario relativa al Aula, Laboratorio y Salidas de estudios o Prácticas de campo. Los exámenes coincidirán con las convocatorias oficiales correspondientes. Para superar la asignatura, será necesario obtener una puntuación igual o superior al 50% de la puntuación asignada. Opción B A esta Opción B podrán optar sólo los alumnos/as que participen de forma presencial en todos los ejercicios y actividades que se propongan en el Aula, para realizar tanto de forma individual como en equipo, y que además asistan a todas y cada una de las actividades de Laboratorio y Salidas de estudio o Prácticas de campo programadas. Dichas actividades consistirán en: Trabajos tutelados individuales y en equipo, evaluados a través de una memoria escrita, con un peso de 60%. Presentaciones individuales y en equipo de los resultados de los trabajos tutelados, con un peso de 40%. Para superar la asignatura, es condición necesaria, pero no suficiente, obtener como mínimo el 30% de la nota máxima asignada a cada una de las partes, tanto en Trabajos tutelados (mínimo 2%), como en Presentaciones (mínimo 1,20%). La materia estará superada cuando la puntuación total (Trabajos tutelados + Presentaciones) resulta una nota final mínima del 50%. En aquellos casos en los que a pesar de no superar el 30% de la nota máxima asignada de alguna de las partes Trabajos tutelados y/o Presentaciones, resulte una nota igual o mayor al 50% requerido, la nota final se traducirá en un 30%, lo que significará un suspenso.

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizado, e outros) considérase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no actual curso académico será de suspenso (0.0). Non se permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado na aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0.0).

Contents

Topic**UNIT 1: NUMBERS AND TRENDS****Skills**

- Writing, reading, and presenting facts and numbers correctly in a professional setting.
- Understanding symbols and abbreviations.
- Presenting data: Interpreting and describing graphs, charts, and diagrams.

Language

- Expressing numbers and calculations.
- Expressing measurement and technical specifications.
- Saying temperatures.
- Saying dates, websites and email addresses.
- Language for talking about trends.
- Adjectives and adverbs.
- Prepositions.
- Describing timelines.

UNIT 2: DESIGN AND INNOVATION: DESCRIBING PRODUCTS AND TECHNOLOGIES**Skills**

- Describing uses, appearance, and definitions.
- Giving a short presentation: Structuring a presentation, exploring effective presentation strategies.

Language

- Language of description (e.g., It's really + adj./ It can + verb/ It looks like, it is shaped like /It is in the shape of …); defining relative clauses, reduced relative clauses.
- Adjectives and qualities, order of adjectives.
- Comparing and contrasting; superlative adjectives.
- Nouns and adjectives connected with geometry and properties.
- Reason and purpose
- Conditionals.
- Language for presenting: Key words and phrases for introducing, and concluding your presentation, signposting language for linking ideas; language for dealing with questions; persuasive language.

UNIT 3: GIVING INSTRUCTIONS AND DESCRIBING A MANUFACTURING PROCESS**Skills**

- Describing a process; explaining a process using a diagram; discussing the stages of production.
- Writing clear instructions and warnings.

Language

- The Passive Voice: present simple passive structures.
- Verbs for manufacturing operations.
- Imperatives for instructions and warnings.
- Language for sequencing instructions and processes (sequence words).
- Adverbials of time (once, while, before and after)
- Prepositions.

4. INSPECTION AND QUALITY CONTROL: REPORT WRITING**Skills**

- Writing a short report: general guidelines (structure, format, and style).
- Writing a short report about a problem.

Language

- Possibility and Probability
 - Past simple and Present Perfect.
 - Time expressions.
-

5. JOB SEARCH: PREPARING FOR A JOB INTERVIEW Skills

- Identifying your personal strengths, key skills and experience.
- Writing a short CV.
- Talking about your CV.
- Writing a cover letter.
- Preparing a job interview: asking and answering interview questions.
- Learning strategies to build applicant's confidence.

Language

- Phrases for demonstrating personal strengths and weaknesses.
- Phrases to give details of your personal characteristics, qualifications, transferable skills, professional experience, etc.
- Action verbs; positive adjectives, positive expressions.
- Softening negative information and highlighting positive information.
- Avoiding spelling mistakes.
- Revision of past form of verbs, and prepositions.
- Useful language for opening, main body and closing cover letters.

Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	0	1
Lecturing	8	15	23
Autonomous problem solving	8	10	18
ICT supported practices (Repeated, Dont Use)	5	8	13
Mentored work	4	16	20
Problem and/or exercise solving	6	10	16
Objective questions exam	6	10	16
Essay	4	15	19
Oral exam	8	16	24

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Introductory activities	Activities directed at presenting the subject, taking contact with the students and gathering information in relation to their previous knowledges of the subject.
Lecturing	Explanation of the linguistic contents and its application (Use of English) in the learning process and the acquisition of the contained theoretical contents of the subject.
Autonomous problem solving	Activities focused on dealing with exercises related to the subject. Students develop the skills and the fulfillment of exercises related with the linguistic skills (Use of English) in Technical English and the communicative skills; especially the oral expression (Speaking).
ICT supported practices (Repeated, Dont Use)	The practice activities in connection to the four communicative skills: oral understanding (Listening), oral expression (Speaking), reading comprehension (Reading), and written expression (Writing), as well as the linguistic skill (Use of English) in Technical English. These activities are done individually or in group.
Mentored work	The analysis and resolution of practical exercises in relation to grammar and vocabulary combined with the communicative skills. Students autonomously perform tasks within and outside the classroom as homework; especially the communicative task of written expression (Writing).

Personalized assistance

Methodologies	Description
Introductory activities	General guidance to students on the subject concerning goals and how to achieve them. Exploring motivations and interests of the students. Indications on assignments and exercises to be done during the course, dates of assignment deliveries and the examination dates and how to achieve goals on the subject. Indicating that no tutorial will be done on the telephone or internet (electronic post, Skype, etc.). In case of any doubt, students will have to contact directly with the professor in the classroom or during tutorial hours.
Mentored work	Activities carried out in the classroom and during tutorials in order to supervise the learning process of the entrusted tasks and in relation to the communicative skill of written expression (Writing) and the linguistic skill (Use of English) in the English language.
Autonomous problem solving	This activity is directed to boost the realization of the diverse exercises related with the communicative skills and the linguistic skill in the application of the theoretical concepts of the language in practice. Detecting the difficulties in the learning process and lessening the different levels of the English language of each student with the rest of the participants in the course.

Lecturing	The personalized attention in lecturing aims at the correct comprehension and the encouragement given to students in the classroom and during tutorials during the learning process of the theoretical concepts of the subject; as well as making indications on the practice of exercises to be carried out and giving advice about the performance so as to successfully achieve a pass in this subject.
-----------	--

Tests	Description
Oral exam	The aim of the personalized attention of the oral examination centers in the preparation, encouragement and the supervision of the oral expression (Speaking) in the classroom during the course and previous to the oral examination. The purpose of this activity is to encourage students to express not only with relevance and quality in relation to engineering and its specific vocabulary but also with linguistic correctness.

Assessment				
	Description	Qualification	Training and Learning Results	
Problem and/or exercise solving	Evaluation of the theoretical concept of the Technical English language and its application. Performance of practical exercises in relation to the linguistic skill (Use of English).	20	B10	D4 D10 D18
Objective questions exam	Evaluations of communicative skill of oral understanding (Listening) with contents related to engineering (16%).	32	B10	D1 D10 D18
	Evaluations of the communicative skill of reading comprehension (Reading) with contents related to engineering (16%).			
Essay	Evaluations of the communicative skill of the written expression (Writing).	16	B10	D1 D4 D7 D10 D18
Oral exam	Evaluations of the communicative skill of oral expression (Speaking) in relation to the linguistic skill and vocabulary in the field of engineering.	32	B10	D1 D4 D7 D10 D17 D18

Other comments on the Evaluation

Particular considerations

There are two assessment systems: continuous or final. The selection of a system excludes the other.

1.1. Continuous assessment

The assignments and tests done during the course will be worth 100 % of the final assessment for those students choosing the continuous evaluation. The non-completion of the assignments requested during the course will be counted as a zero (0.0). The assignments must be delivered or submitted by the deadlines and dates set in advance.

1.2. Final assessment (non-attendants)

Students choosing the final examination will have to take a final overall test that will take place on the official date established by the School of Industrial Engineering. To this end, students should consult the school's website, where the examination date and time are specified.

2. Subject's final grade

2.1. Continuous assessment

The final mark for this subject is calculated taking into consideration all the skills practised during the course. Therefore, each one of them is given the following weight in the final grade:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing: 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills,

and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course through continuous assessment, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

To completely pass the course, students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the failed part(s) in an exam in July of the current academic year. If the course is not passed in the second call, students will have to resit the exam of the whole course in future calls, except for the next assessment call in September.

Continuous assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

2.2. Final Assessment (non-attendants)

The final assessment is calculated as follows:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

Regarding July's test, to completely pass the course, final assessment students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the exam of the whole course in future calls, including all the skills and linguistic contents of the subject.

Final assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

3. Additional considerations

3.1. During the examinations no dictionaries, notes or electronic devices (mobile phones, tablets, PCs, etc.) will be allowed.

3.2. It is students' responsibility to check all the resources in MooVi and/or their emails, as well as to be aware of examination or submission dates.

3.3. All the above-mentioned comments also pertain to Erasmus students. In the event of not being able to access MooVi, students must contact the professor to solve the problem.

3.4. Students are requested to have an adequate ethical behaviour. In case of detecting an unethical behaviour (coping, plagiarism, use of not authorized electronic devices, and others), it will be considered that the student does not meet the requirements to pass the subject. In this case, the overall grade in the current academic year will be a fail (0.0).

Recommendations

Other comments

We recommend students, who wish to take part in this course, to have a prior A1 level in English so as to reach the A2 level, according to the Common European Framework of Reference for Languages of the Council of Europe.

Requisites:

To register in this subject it is necessary to have passed or to be registered for all the subjects of the lower-division courses to the course where this subject is placed.

We also recommend continuous assessment due to the methodology used to practice and consolidate the learning process of the subject contents. Therefore, the active participation of students is essential to pass the Technical English subject requisites.

It is advisable to check the School's lectures timetable so as to avert incompatibility of attendance with any other subject. Therefore students will not be permitted to sit for continuous evaluation if there is overlap.

In order to avoid damaging computers, students will not be allowed to take drinks or food into the classroom. If the ingestion of liquid or food is necessary, students must show an official medical prescription.

Contents

Topic

UNIT 1. Facts and figures: Presenting data	UNIT 1 Skills - Writing, reading, and presenting facts and figures in a professional setting. - Understanding symbols and abbreviations. - Describing dimensions and specifications; phrases related to length, width, thickness, etc. - Locating required information in a table of technical data. Language focus - Expressing facts and figures (mathematical symbols, dates, amounts, internet symbols and abbreviations). - Phrases for approximating numbers; saying results. - Vocabulary for describing trends. - Prepositions.
UNIT 2. Professional Presentations: Presenting with Impact	UNIT 2 Skills - Delivering impactful presentations. - Structuring a presentation. - Illustrating the importance of body language and voice power to communicate your message clearly and persuasively. - Describing Trends. - Describing and referring to visual aids. Language focus - Presentation language: Language for introducing your presentation; language for focusing and emphasizing key points; language for in recapping. - Using persuasive language to create impact. - Signposting language for linking the parts. - Cause-effect verbs. - Describing timelines: past simple, present perfect, etc.
UNIT 3. Technical Descriptions	Skills - Understanding and describing process diagrams, phases and procedures. - Describing technical functions and applications and explaining how technology works - Describing specific materials; categorising materials and specifying and describing properties - Describing component shapes and features; explaining manufacturing techniques - Describing health and safety precautions and emphasising the importance of precautions. Language focus - Verbs for describing stages of a process. - The passive form: Present simple passive structures. - Time Connectors. - Verbs for describing movement; verbs and adjectives to describe advantages; adverbs for adding emphasis. - Cause-effect (lead to, result in, etc.) - Negative prefixes (in-, un-, dis-, etc.). - Relative clauses: Defining vs non-defining relative clauses; shortened relative clauses. - Mixed conditionals, first vs. second conditional. - Words for describing mechanisms, machining, properties of materials.

UNIT 4. Applying for a Job

Skills

- Doing a self-evaluation of your strengths and weaknesses.
- Writing different types of CV.
- Becoming acquainted with cover and application letters.
- Preparing for job interviews.
- Demonstrating the best body language for job interviews.

Language focus

- Phrases for demonstrating strengths and weaknesses.
- Useful language for talking about yourself, and demonstrating your skills and experience.
- Action verbs; positive adjectives, positive expressions.
- Softening negatives and turning negatives into positives.
- Avoiding spelling mistakes.
- Phrases for opening and closing a letter of application.

UNIT 5. Writing Emails

Skills

- Writing short emails with appropriate formatting.
- Recognizing and producing formal and informal language in emails.
- Making your writing structured; writing effective openings and closings
- Handling style, tone and voice.

Language focus

- Common email expressions.
- Writing style.
- Creating a warm, professional tone.
- Avoiding spelling mistakes.

Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	0	1
Mentored work	4	16	20
Autonomous problem solving	8	10	18
ICT supported practices (Repeated, Dont Use)	5	8	13
Lecturing	8	15	23
Problem and/or exercise solving	6	10	16
Essay	4	15	19
Objective questions exam	3	5	8
Oral exam	8	16	24
Objective questions exam	3	5	8

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Introductory activities	Activities aimed at presenting the subject, getting in touch with students and gathering information about their previous knowledge on the topic.
Mentored work	Analysis and resolution of practical exercises related to the grammatical and lexical contents, and to the communication skills. The students must develop these activities in an autonomous way, specially those homework activities concerning Writing skills.
Autonomous problem solving	Activities in which problems are presented and/or exercises related to the subject. The student must develop the analysis and resolution of problems and/or activities concerning the four communicative skills at an individual level, as well as the technical English linguistic skill (Use of English); specially those ones concerning Speaking.
ICT supported practices (Repeated, Dont Use)	Practice of the four communicative skills: listening, speaking, reading and writing, as well as the technical English linguistic skill (Use of English) at an individual or group level.
Lecturing	Explanation of linguistic contents and their application (Use of English) for the learning and acquisition of the theoretical contents of the subject.

Personalized assistance

Methodologies	Description
---------------	-------------

Introductory activities	The objective of the introductory activities is to provide general guidance on the subject; to promote learning strategies; to make general notes about the work and exercises, deadlines for the submission of work and the exam dates; and to give advice on how to pass the subject. It is important to know that no tutorials will be done on the telephone or internet (email, Skype, etc.). In case of any doubt or comment, students should contact directly with the professor in the classroom or during tutorial hours.
Autonomous problem solving	This activity seeks to help students with the practical exercises related to the communicative skills and the linguistic skills and their application for the learning and acquisition of the theoretical contents of the subject.
Mentored work	Practice of the different exercises in relation to the communicative skills and linguistic skills in order to apply English theoretical concepts.
Lecturing	The personalised attention for the master class is focused on the attention of students in the classroom and during tutorial hours. It focuses on the correct comprehension and promotion of the learning of the subject's theoretical concepts, as well as on providing guidance on work and practical exercises and on giving advice on how to pass the subject.
Tests	Description
Oral exam	The objective of the personalised attention of the oral exam is focused on the preparation, promotion and supervision of the oral expression (Speaking) in the classroom during the course and before the exam. This activity seeks to help the students not only to express themselves with relevance and appropriateness using the topics and vocabulary from the field of engineering, but also with linguistic correction.

Assessment				
	Description	Qualification	Training and Learning Results	
Problem and/or exercise solving	Evaluation of theoretical concepts and their application. Resolution of practical exercises related to the linguistic skill (Use of English) of technical English.	20	B10	D7 D10 D18
Essay	Evaluation of the writing skill.	16	B10	D1 D4 D7 D9 D10 D18
Objective questions exam	Evaluation of the listening skill with engineering-related contents.	16	B10	D4 D9 D10 D18
Oral exam	Evaluation of the speaking skill with engineering-related vocabulary and topics.	32	B10	D1 D4 D7 D10 D17 D18
Objective questions exam	Evaluation of the reading skill with engineering-related topics and vocabulary.	16	B10	D1 D4 D7 D10 D17 D18

Other comments on the Evaluation

Particular considerations

There are two assessment systems: continuous or final. The selection of a system excludes the other.

1.1. Continuous assessment

The assignments and tests done during the course will be worth 100 % of the final assessment for those students choosing the continuous evaluation. The non-completion of the assignments requested during the course will be counted as a zero (0.0). The assignments must be delivered or submitted by the deadlines and dates set in advance.

1.2. Final assessment (non-attendants)

Students choosing the final examination will have to take a final overall test that will take place on the official date

established by the School of Industrial Engineering. To this end, students should consult the school's website, where the examination date and time are specified.

2. Subject's final grade

2.1. Continuous assessment

The final mark for this subject is calculated taking into consideration all the skills practised during the course. Therefore, each one of them is given the following weight in the final grade:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing: 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course through continuous assessment, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

To completely pass the course, students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the failed part(s) in an exam in July of the current academic year. If the course is not passed in the second call, students will have to resit the exam of the whole course in future calls, except for the next assessment call in September.

Continuous assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

2.2. Final Assessment (non-attendants)

The final assessment is calculated as follows:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

Regarding July's test, to completely pass the course, final assessment students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the exam of the whole course in future calls, including all the skills and linguistic contents of the subject.

Final assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

3. Additional considerations

3.1. During the examinations no dictionaries, notes or electronic devices (mobile phones, tablets, PCs, etc.) will be allowed.

3.2. It is students' responsibility to check all the resources in MooVi and/or their emails, as well as to be aware of examination or submission dates.

3.3. All the above-mentioned comments also pertain to Erasmus students. In the event of not being able to access MooVi, students must contact the professor to solve the problem.

3.4. Students are requested to have an adequate ethical behaviour. In case of detecting an unethical behaviour (coping, plagiarism, use of not authorized electronic devices, and others), it will be considered that the student does not meet the requirements to pass the subject. In this case, the overall grade in the current academic year will be a fail (0.0).

Recommendations

Other comments

We recommend students to have some knowledge of English. This course will start from an A2 level and it will reach B1 level, according to the European Framework of Reference for Languages of the Council of Europe.

Requisites:

To register in this subject, it is necessary to have passed or to be registered for all the subjects of the lower courses.

We also recommend continuous assessment due to the methodology used to practise and consolidate the contents of the subject. Therefore, the active participation of students is essential to pass the Technical English subject.

It is advisable to check and compare this subject's timetable with the School's lectures timetables so as to avoid incompatibilities. Students will not be allowed to choose continuous assessment if there is an overlap with other subjects.

In order to avoid damaging the room's computer equipment, students will not be allowed to take drinks or food into the classroom. If the ingestion of liquids or food is due to medical reasons, students must show an official medical prescription.

Sending emails or using of mobile phones during the lessons are prohibited.

The student who does not comply with the information in the previous paragraph will also lose the opportunity to follow the continuous assessment process.

IDENTIFYING DATA**Methodology for the preparation, presentation and management of technical projects**

Subject	Methodology for the preparation, presentation and management of technical projects			
Code	V12G360V01905			
Study programme	Grado en Ingeniería en Tecnologías Industriales			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	4th	2nd
Teaching language	Spanish Galician English			
Department

Web	http://moovi.uvigo.gal/			
General description	The aim of this course is to prepare the students to handle the methods, techniques and tools that are needed for the elaboration and management of technical documents in the industrial field of Engineering. It will also be sought to develop skills in the handling of information and communication technologies related to the professional field of the student's degree. Furthermore, the student skills to communicate properly the knowledge, procedures and results in the Industrial Engineering field will be strengthened. An essentially practical approach will be used, based in the solution of specific application exercises -with guidance of the subject's lecturer- that will require to apply the theoretical contents of the course.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
C18	CE18 Knowledge and skills to organize and manage projects. Know the organizational structure and functions of a project office.
D2	CT2 Problems resolution.
D3	CT3 Oral and written proficiency.
D5	CT5 Information Management.
D6	CT6 Application of computer science in the field of study.
D7	CT7 Ability to organize and plan.
D8	CT8 Decision making.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D11	CT11 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and in professional practice with the aim of achieving a more just and equal society
D13	CT13 Ability to communicate orally and in writing in the Galician language.
D14	CT14 Creativity.
D15	CT15 Objectification, identification and organization.
D17	CT17 Working as a team.
D18	CT18 Working in an international context.
D20	CT20 Ability to communicate with people not expert in the field.

Other comments

Previously to the realisation of the final assesments, students should check in the FAITIC platform to know whether it is necessary for them to carry any particular documentation, materials, etc. into the exam room to perform the tests.

It is necessary that the student registered in this course, either has passed all courses of the former years, or is registered in the courses he's not passed yet.

Informe de prácticas, prácticum e prácticas externas	Calidade dos informes das diferentes prácticas propostas e das solucións achegadas	20	B3 B4	C3	D2 D5 D6 D7 D17

Other comments on the Evaluation

Poderanse propoñer actividades complementarias, de carácter voluntario, que complementen a nota calculada en función dos criterios expresados anteriormente.

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considérase que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no presente curso académico será de suspenso (0.0).

A avaliación nesta materia ten un compoñente moi alto de avaliación continua durante a realización das diferentes actividades académicas desenvolvidas durante o curso. No caso de convocatorias diferentes da convocatoria de maio e para alumnos que renuncien á avaliación continua, a avaliación realizarase no laboratorio, mediante o desenvolvemento práctico dunha aplicación similar ás desenvolvidas durante o curso.

Topic

TEMA 1.- Introducción á Seguridade e Hixiene do Traballo	1.1.- Terminoloxía básica 1.2.- Saúde e traballo 1.3.- Factores de risco 1.4.- Incidencia dos factores de risco sobre a saúde 1.5.- Técnicas de actuación fronte aos danos derivados do traballo
TEMA 2.- Evolución histórica e lexislación	2.1.- Evolución histórica 2.2.- Evolución en España 2.3.- A Seguridade e Hixiene do Traballo na lexislación española 2.4.- Responsabilidades e sancións
TEMA 3.- Seguridade do Traballo	3.1.- O accidente de traballo 3.2.- Seguridade do traballo 3.3.- Causas dos accidentes 3.4.- Análise estatística dos accidentes 3.5.- Xustificación da prevención
TEMA 4.- Técnicas de seguridade. Avaliación de riscos	4.1.- Técnicas de seguridade 4.2.- Obxectivos da avaliación de riscos 4.3.- Avaliación xeral 4.4.- Avaliación das condicións de traballo 4.5.- Técnicas analíticas posteriores ao accidente 4.6.- Técnicas analíticas anteriores ao accidente
TEMA 5.- Normalización	5.1.- Vantaxes, requisitos e características das normas 5.2.- Normas de seguridade 5.3.- Procedemento de elaboración 5.4.- Orde e limpeza
TEMA 6.- Sinalización de seguridade	6.1.- Características e normativa 6.2.- Clases de sinalización 6.3.- Sinalización en forma de panel
TEMA 7.- Equipos de protección	7.1.- Individual 7.2.- Integral 7.3.- Colectiva
TEMA 8.- Técnicas específicas de seguridade	8.1.- Máquinas 8.2.- Incendios e explosións 8.3.- Contactos eléctricos 8.4.- Manutención manual e mecánica 8.5.- Industria mecánica 8.6.- Produtos químicos 8.7.- Mantemento
TEMA 9.- Hixiene do Traballo	9.1.- Ambiente industrial 9.2.- Hixiene do traballo e terminoloxía 9.3.- Hixiene teórica e valores límites ambientais 9.4.- Hixiene analítica 9.5.- Hixiene de campo e enquisa hixiénica 9.6.- Hixiene operativa
TEMA 10.- Axentes físicos ambientais	10.1.- Ruído e vibracións 10.2.- Iluminación 10.3.- Radiacións *ionizantes e non *ionizantes 10.4.- Tensión térmica
TEMA 11.- Protección fronte a riscos hixiénicos	11.1.- Vías respiratorias 11.2.- Oídos 11.3.- Ollos
TEMA 12.- Riscos hixiénicos da industria química	12.1.- Procesos inorgánicos 12.2.- Procesos orgánicos 12.3.- Accidentes graves
TEMA 13.- Seguridade nos lugares de traballo	13.1.- A seguridade no proxecto 13.2.- Mapas de riscos

TEMA 14.- Ergonomía

- 14.1.- Concepto
- 14.2.- Aplicación da ergonomía á seguridade
- 14.3.- Carga física e fatiga muscular
- 14.4.- Carga e fatiga mental

TEMA 15.- Psicosocioloxía aplicada á prevención

- 15.1.- Factores psicosociais
- 15.2.- Consecuencias dos factores psicosociais sobre a saúde
- 15.3.- Avaliación dos factores psicosociais
- 15.4.- Intervención psicosocial

Planificación

	Class hours	Hours outside the classroom	Total hours
Lección maxistral	26	49	75
Resolución de problemas	24	22	46
Exame de preguntas obxectivas	2	15	17
Resolución de problemas e/ou exercicios	2	10	12

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

	Description
Lección maxistral	Exposición oral e directa, por parte do profesor, dos coñecementos fundamentais correspondentes aos temas da materia.
Resolución de problemas	O profesor expón aos alumnos unha serie de problemas para que os traballen e resolvan en clase en pequenos grupos.

Atención personalizada

Methodologies	Description
Resolución de problemas	Darase a coñecer os alumnos, a principio de curso, os horarios de tutorías nos que se resolverán as dúbidas que existan con respecto á teoría, problemas e traballos

Avaliación

	Description	Qualification	Training and Learning Results
Resolución de problemas	Proporase ao alumno unha serie de problemas que terá que resolver	30	B4 B6 B7 D2 D5 D8 D9 D10 D14 D17
Exame de preguntas obxectivas	A finalidade desta proba de resposta múltiple, que figura no calendario de exames da Escola, é avaliar o nivel de coñecementos alcanzado polos alumnos	40	B11 D5 D7 D8 D9 D10
Resolución de problemas e/ou exercicios	A finalidade de esta proba de desenvolvemento, que terá lugar na semana previa á semana dos exames da Escola, é a resolución dun caso práctico que deberán resolver os alumnos de modo que se aplique de maneira práctica os coñecementos adquiridos	30	D7 D8 D9 D10 D14

Other comments on the Evaluation

Con respecto ao exame de XULLO (2ª convocatoria), se manterá a cualificación obtida polo alumno nos controis e presentacións / exposicións realizados durante o período docente. Iso significa que o alumno unicamente realizará probaa tipo test do devandito exame. Cando a Escola libere a un alumno do proceso de avaliación continua, a súa cualificación será o 100% da nota obtida en probaa tipo test anteriormente citada. Compromiso ético Espérase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, por exemplo), considerarase que *el alumno non reúne os requisitos necesarios para superar a materia.

General description	(*)Introduction to laser technology and its applications for undergraduate students of the industrial field.			

Training and Learning Results	
Code	
B10	CG10 Ability to work in a multidisciplinary and multilingual environment.
D10	CT10 Self learning and work.

Expected results from this subject		
Expected results from this subject	Training and Learning Results	
- Know the physical principles in which it bases the operation of a laser and his parts.	B10	D10
- Know the main properties of a laser and relate them with the potential applications.		
- Know the different types of lasers differentiating his specific characteristics.		
- Know the main applications of the technology laser in the industry.		

Contents	
Topic	
Chapter 1.- INTRODUCTION	1. Electromagnetic waves in the vacuum and in the matter. 2. Laser radiation. 3. Properties of the laser radiation.
Chapter 2.- BASICS	1. Photons and energy level diagrams. 2. Spontaneous emission of electromagnetic radiation. 3. Population inversion. 4. Stimulated emission. 5. Amplification.
Chapter 3. COMPONENTS OF A LASER	1. Active medium 2. Excitation mechanisms. 3. Feedback mechanisms. 4. Optical cavity. 5. Exit device.
Chapter 4. TYPES OF LASER	1. Gas lasers 2. Solid-state lasers 3. Diode lasers. 4. Other lasers.
Chapter 5. OPTICAL COMPONENTS AND SYSTEMS	1. Spherical lenses. 2. optical centre of a lens. 3. Thin lenses. Ray tracing. 4. Thin lenses coupling. 5. Mirrors. 6. Filters. 7. Optical fibers.

1. Introduction to laser materials processing
2. Introduction to laser cutting and drilling.
3. Introduction to laser welding.
4. Introduction to laser marking.
5. Introduction to laser surface treatments.

Planning

	Class hours	Hours outside the classroom	Total hours
Laboratory practical	18	30.6	48.6
Lecturing	32.5	65	97.5
Essay questions exam	1.7	0	1.7
Report of practices, practicum and external practices	1.9	0	1.9
Problem and/or exercise solving	0.3	0	0.3

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Laboratory practical	Activities of application of the knowledge to specific situations and of acquisition of basic and practical skills related to the matter object of study. They will be developed in the laboratories of industrial applications of the lasers of the EEL.
Lecturing	Exhibition on the part of the teacher of the contents on the matter object of study. Exhibition of real cases of application of the laser technology in the industry.

Personalized assistance

Methodologies	Description
Laboratory practical	

Assessment

	Description	Qualification	Training and Learning Results	
Essay questions exam	Several tests consisting of development questions will be proposed, so that no test exceeds 40% of the overall grade for the subject..	70	B10	D10
Report of practices, practicum and external practices	The evaluation of the laboratory practices will be carried out by means of the qualification of the corresponding practice reports.	20	B10	D10
Problem and/or exercise solving	During the course there will be carried out a test of follow-up of the subject that will consist of two questions of equal value.	10	B10	D10

Other comments on the Evaluation

If some student was resigning officially the continuous assessment, the final note would be calculated by the following formula: $(0.8 \times \text{Exam qualification}) + (0.2 \times \text{Practices qualification})$. It is mandatory to carry out the laboratory practices in order to pass the subject. It is mandatory to attend 75% of the theory lessons to pass the subject. Ethical commitment: it is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0). The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

General description	O Traballo de Fin de Grao (TFG) é un traballo orixinal e persoal que cada estudante realizará de forma autónoma baixo tutorización docente, e debe permitirlle mostrar de forma integrada a adquisición dos contidos formativos e as competencias asociadas ao título. A súa definición e contidos están explicados de forma máis extensa no Regulamento do Traballo Fin de Grao aprobado pola Xunta de Escola da Escola de Enxeñaría Industrial o 21 de xullo de 2015.			

Resultados de Formación e Aprendizaxe	
Code	
B1	CG1 Capacidade para deseñar, desenvolver, implantar, xestionar e mellorar produtos e procesos nos distintos ámbitos industriais, por medio de técnicas analíticas, computacionais ou experimentais apropiadas.
B2	CG2 Capacidade para dirixir actividades relacionadas coa competencia CG1.
B3	CG3 Coñecemento en materias básicas e tecnolóxicas, que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacións.
B4	CG4 Capacidade para resolver problemas con iniciativa, toma de decisións, creatividade, razoamento crítico e de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
B10	CG10 Capacidade para traballar nun medio multilingüe e multidisciplinar.
B12	CG12 Capacidade para a integración das competencias CG1 a CG11 nos traballos e proxectos relacionados coas Tecnoloxías Industriais.
D4	CT4 Comunicación oral e escrita de coñecementos en lingua estranxeira.
D12	CT12 Habilidades de investigación.
D13	CT13 Capacidade para comunicarse por oral e por escrito en lingua galega.

Resultados previstos na materia		
Expected results from this subject	Training and Learning Results	
Procura, ordenación e estruturación de información sobre calquera tema.	B1 B2 B3 B4 B10 B12	D12
Elaboración dunha memoria na que se recollan, entre outros, os seguintes aspectos: antecedentes, problemática ou estado da arte, obxectivos, fases do proxecto, desenvolvemento do proxecto, conclusións e liñas futuras.	B1 B2 B3 B4 B10 B12	D4 D12 D13
Deseño de equipos, prototipos, programas de simulación, etc, segundo especificacións.	B1 B2 B3 B4 B10 B12	D12
No momento de realizar a solicitude da defensa do TFG, o alumno deberá xustificar a adquisición dun nivel adecuado de competencia en lingua inglesa.		D4

Topic

Proxectos clásicos de enxeñaría	Poden versar, por exemplo, sobre o deseño e mesmo a fabricación dun prototipo, a enxeñaría dunha instalación de produción, ou a implantación dun sistema en calquera campo industrial. Polo xeral, neles desenvólvese sempre a parte documental da memoria (cos seus apartados de cálculos, especificacións, estudos de viabilidade, seguridade, etc. que se precisen en cada caso), planos, prego de condicións e orzamento e, nalgúns casos, tamén se contempla os estudos propios da fase de execución material do proxecto.
Estudos técnicos, organizativos e económicos	Consistentes na realización de estudos relativos a equipos, sistemas, servizos, etc., relacionados cos campos propios da titulación, que traten un ou máis aspectos relativos ao deseño, planificación, produción, xestión, explotación e calquera outro propio do campo da enxeñaría, relacionando cando cumpra alternativas técnicas con avaliacións económicas e discusión e valoración dos resultados.
Traballos teórico-experimentais	De natureza teórica, computacional ou experimental, que constitúan unha contribución á técnica nos diversos campos da enxeñaría incluíndo, cando cumpra, avaliación económica e discusión e valoración dos resultados.

Planificación

	Class hours	Hours outside the classroom	Total hours
Actividades introductorias	5	25	30
Traballo tutelado	15	210	225
Presentación	1	14	15

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

	Description
Actividades introductorias	O alumno realizará, de forma autónoma, unha procura bibliográfica, lectura, procesamento e elaboración de documentación.
Traballo tutelado	O estudante, de maneira individual, elabora unha memoria segundo as indicacións do Regulamento do Traballo Fin de Grao da EEI.
Presentación	O alumnado debe preparar e defender o traballo realizado diante dun tribunal de avaliación segundo as indicacións do Regulamento do Traballo Fin de Grao da EEI.

Atención personalizada

Methodologies Description

Traballo tutelado	Cada alumno terá un titor e/ou un co-titor encargados de guiarlle, e que lle marcarán as directrices oportunas para realizar o TFG.
-------------------	---

Avaliación

	Description	Qualification	Training and Learning Results	
Traballo tutelado	A cualificación da memoria do Traballo Fin de Grao levará a cabo segundo o especificado no Regulamento do Traballo Fin de Grao da Escola de Enxeñaría Industrial.	70	B1 B2 B3 B4 B10 B12	D4 D12 D13
Presentación	A defensa do Traballo Fin de Grao levará a cabo segundo o especificado no Regulamento do Traballo Fin de Grao da Escola de Enxeñaría Industrial.	30	B1 B2 B3 B4 B10 B12	D4 D12 D13

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio ou outros) considerarase que a cualificación global no presente curso académico será de suspenso (0.0).

Requisitos: Para matricularse no Traballo Fin de Grao é necesario superar ou ben estar matriculado de todas as materias dos cursos inferiores ao curso no que está situado o TFG.

Información importante: No momento da defensa do TFG, o alumno deberá ter todas as materias restantes do título superadas, tal como establece o artigo 7.7 do Regulamento para a realización do Traballo Fin de Grao da Universidade de Vigo.

A orixinalidade da memoria será obxecto de estudo mediante unha aplicación informática de detección de plaxios.

Capacidade para adaptarse ás situacións reais da profesión.	B1 B2 B3 B4
Integración en grupos de traballo multidisciplinares.	B2 B3 B4
Responsabilidade e traballo autónomo.	B1 B2 B3 B4

Contidos

Topic	
Integración nun grupo de traballo nunha empresa.	O alumno integrarase no contexto organizativo dunha empresa, téndose que coordinar cos diferentes membros do grupo de traballo ao que sexa asignado.
Realización de actividades ligadas ao desempeño da profesión.	Ao alumno encomendaráselle unha serie de tarefas relacionadas cos coñecementos e coas competencias dos seus estudos.

Planificación

	Class hours	Hours outside the classroom	Total hours
Prácticum, Practicas externas e clínicas	0	150	150

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente

Description

Prácticum, Practicas externas e clínicas	O alumno integrárase nun grupo de traballo nunha empresa onde terá a oportunidade de poñer en práctica os coñecementos e as competencias adquiridas durante os seus estudos, e así complementar e reforzar a súa formación.
--	---

Atención personalizada

Methodologies	Description
Prácticum, Practicas externas e clínicas	O alumno dispoñerá dun titor na empresa onde fará a súas prácticas e dun titor académico.

Avaliación

	Description	Qualification	Training and Learning Results
Prácticum, Practicas externas e clínicas	Os estudantes en prácticas deberán manter un contacto continuado non só co seu titor na empresa, senon tamén co seu titor académico. Ao concluir as prácticas, os alumnos deberán entregar ao seu titor académico unha memoria final e o informe en documento oficial D6-Informe do estudante. Na avaliación terase en conta a valoración do desempeño do alumno realizada polo titor na empresa, o seguimento realizado polo titor académico e os informes entregados polo alumno.	100	B1 B2 B3 B4

Other comments on the Evaluation

Adicionalmente ao xa exposto nesta guía docente é preciso facer as seguintes aclaracións:

1º. Esta materia rexerá polo establecido no Regulamento de Prácticas en Empresa da EEI

(http://eei.uvigo.es/opencms/export/sites/eei/eei_gl/documentos/escola/Normativa/practicas_empresa.pdf).

2º. A Escola fará pública a oferta de prácticas en empresa curriculares entre as que o alumnado, que cumpra os requisitos descritos no artigo 6 do citado regulamento, deberá facer a súa escolla dentro do prazo fixado ao efecto. O procedemento de realización de prácticas en empresa curriculares está establecido no artigo 7 do regulamento.

3º. A duración das prácticas pode chegar a ser ata de un máximo de 240 horas, para que o alumno saque o maior proveito da súa estadía na empresa. Será a empresa na súa oferta de prácticas a que estipulará a duración das mesmas.
